Measurement Data:

Radiated Emissions, 1-25 GHz

Measuring distance: 3m (1 – 18 GHz)
1m (18 – 26 GHz)

A pre-scan was performed above 18 GHz and no spurious emissions were detected.

Measured values:

All emissions are below the Average Limit even when measured with Peak Detector.

Average Values are calculated from Peak Values by Duty Cycle Correction Factor.

Antenna factor, amplifier gain and cable loss are included in spectrum analyzer "Transducer factor".
