5.2.5. Transmitter Conducted Emissions at Band Edges $\pm$ X MHz - LAT**Test Summary:**

Test Engineer:	Ben Mercer	Test Dates:	18 July 2016 & 19 July 2016
Test Sample IMEI:	358640070309241		

FCC Reference:	Parts 2.1051 & 27.53(m)(4)
Test Method Used:	KDB 971168 Section 6 referencing FCC Part 27.53 & note 2 below

Environmental Conditions:

Temperature (°C):	23 to 24
Relative Humidity (%):	46 to 49

Note(s):

1. Measurements were performed with the EUT transmitting QPSK and 16QAM modulation schemes, with resource block settings stated in section 4.3.
2. Sweep time was set to auto and an RMS detector with trace averaging of 300 sweeps was used.
3. In accordance with 27.53(m)(4), the following limits were calculated:

5 MHz Channel Bandwidth		10 MHz Channel Bandwidth	
Frequency (MHz)	Limit (dBm)	Frequency (MHz)	Limit (dBm)
30 – 2490.5	-25	30 – 2490.5	-25
2490.5 – 2496	-13	2490.5 – 2496	-13
2690 – 2695	-10	2690 – 2695	-10
2695 – 2696	-13	2695 – 2698.954	-13
2696 – 26000	-25	2698.954 – 26000	-25

15 MHz Channel Bandwidth		20 MHz Channel Bandwidth	
Frequency (MHz)	Limit (dBm)	Frequency (MHz)	Limit (dBm)
30 – 2490.5	-25	30 – 2490.5	-25
2490.5 – 2496	-13	2490.5 – 2496	-13
2690 – 2695	-10	2690 – 2695	-10
2695 – 2703.480	-13	2695 – 2708.039	-13
2703.480 – 26000	-25	2708.039 – 26000	-25

Transmitter Conducted Emissions at Band Edges $\pm$ X MHz (continued)**Note(s):**

4. For given channel bandwidth, the minimum value of the emission bandwidth was used to calculate the above limits. The choice of the minimum emission bandwidth, regardless of modulation schemes, gives a worst case scenario for the applicable limit lines.
5. Measurements were performed conducted with the antenna gain included in the spectrum analyser reference level offset. The customer stated that the antenna gain is -2.6 dB.
6. The plots of this section illustrate the conducted emissions at band edges, at frequencies below 2495 MHz and above 2691 MHz. Compliance in the frequency ranges 2495 to 2496 MHz and 2690 to 2691 MHz are shown in section 5.2.9 of this report.
7. The lowest frequency in the lower band edge plots and the highest frequency in the upper band edge plots were extended within reasonable limits in order to show the frequency varying limit line.
8. In accordance with Part 27.53(m)(6), a narrower resolution bandwidth may be used, provided that the measured power is integrated over the full required measurement bandwidth of 1 MHz. The channel power function of the spectrum analyser was used where necessary.
9. * Integrated level (dBm).

Transmitter Conducted Emissions at Band Edges $\pm$ X MHz (continued)**Results: 5 MHz Channel Bandwidth / 2488.75 to 2495 MHz & 2691 to 2697.25 MHz / QPSK**

Frequency (MHz)	Resource Block(s)	Resource Block Offset	Emission Level (dBm)	Limit (dBm)	Margin (dB)	Result
2494	25	0	-23.5	-13.0	10.5	Complied

5.2.6. Transmitter Conducted Emissions at Band Edges $\pm$ X MHz - UAT**Test Summary:**

Test Engineer:	Ben Mercer	Test Date:	22 July 2016
Test Sample IMEI:	358640070309241		

FCC Reference:	Parts 2.1051 & 27.53(m)(4)
Test Method Used:	KDB 971168 Section 6 referencing FCC Part 27.53 & note 2 below

Environmental Conditions:

Temperature (°C):	25
Relative Humidity (%):	51

Note(s):

1. Measurements were performed with the EUT transmitting QPSK and 16QAM modulation schemes, with resource block settings stated in section 4.3.
2. Sweep time was set to auto and an RMS detector with trace averaging of 300 sweeps was used.
3. In accordance with 27.53(m)(4), the following limits were calculated:

5 MHz Channel Bandwidth		10 MHz Channel Bandwidth	
Frequency (MHz)	Limit (dBm)	Frequency (MHz)	Limit (dBm)
30 – 2490.5	-25	30 – 2490.5	-25
2490.5 – 2496	-13	2490.5 – 2496	-13
2690 – 2695	-10	2690 – 2695	-10
2695 – 2696	-13	2695 – 2698.954	-13
2696 – 26000	-25	2698.954 – 26000	-25

15 MHz Channel Bandwidth		20 MHz Channel Bandwidth	
Frequency (MHz)	Limit (dBm)	Frequency (MHz)	Limit (dBm)
30 – 2490.5	-25	30 – 2490.5	-25
2490.5 – 2496	-13	2490.5 – 2496	-13
2690 – 2695	-10	2690 – 2695	-10
2695 – 2703.480	-13	2695 – 2708.039	-13
2703.480 – 26000	-25	2708.039 – 26000	-25

Transmitter Conducted Emissions at Band Edges $\pm$ X MHz (continued)**Note(s):**

4. For given channel bandwidth, the minimum value of the emission bandwidth was used to calculate the above limits. The choice of the minimum emission bandwidth, regardless of modulation schemes, gives a worst case scenario for the applicable limit lines.
5. Measurements were performed conducted with the antenna gain included in the spectrum analyser reference level offset. The customer stated that the antenna gain is 0.6 dB.
6. The plots of this section illustrate the conducted emissions at band edges, at frequencies below 2495 MHz and above 2691 MHz. Compliance in the frequency ranges 2495 to 2496 MHz and 2690 to 2691 MHz are shown in section 5.2.10 of this report.
7. The lowest frequency in the lower band edge plots and the highest frequency in the upper band edge plots were extended within reasonable limits in order to show the frequency varying limit line.
8. In accordance with Part 27.53(m)(6), a narrower resolution bandwidth may be used, provided that the measured power is integrated over the full required measurement bandwidth of 1 MHz. The channel power function of the spectrum analyser was used where necessary.
9. * Integrated level (dBm).

Transmitter Conducted Emissions at Band Edges $\pm$ X MHz (continued)**Results: 5 MHz Channel Bandwidth / 2488.75 to 2495 MHz & 2691 to 2697.25 MHz / QPSK**

5.2.7. Transmitter Radiated Spurious Emissions – LAT**Test Summary:**

Test Engineer:	Andrew Edwards	Test Dates:	13 July 2016 to 17 July 2016
Test Sample IMEI:	358640070286456		

FCC Reference:	Parts 2.1053 & 27.53(m)(4)
Test Method Used:	KDB 971168 Section 6.1 referencing FCC Part 2.1053
Frequency Range:	30 MHz to 27 GHz
Configuration:	10 MHz, QPSK, 1RB, 0 Offset

Environmental Conditions:

Temperature (°C):	25 to 26
Relative Humidity (%):	39 to 46

Note(s):

1. The EUT was set to transmit with a 10 MHz channel bandwidth with QPSK modulation applied and 1 resource block with 0 offset, as this was found to be the worst case modulation scheme with regards to emissions after preliminary investigations and was therefore deemed to be the worst case.
2. The emission seen on the 1 GHz to 3 GHz plot at approximately 2593 MHz is the EUT carrier.
3. No spurious emissions were detected above the measurement system noise floor therefore the highest peak noise floor reading of the measuring receiver was recorded in the table below.
4. Middle channel results are recorded in this report and are representative of bottom and top channel results which are held on the UL IT server and available for inspection on request.
5. Pre-scan measurements below 1 GHz are performed on separate plots with different transducer factors for vertical and horizontal polarisation. The pre-scan plot for 30 MHz to 1 GHz in this test report is for vertical only. All other plots are stored on the company server and are available if required.
6. Measurements below 1 GHz were performed in a semi-anechoic chamber (Asset Number K0017) at a distance of 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.
7. Pre-scans above 1 GHz were performed in a semi-anechoic chamber (Asset Number K0017) at a distance of 3 metres. The EUT was placed at a height of 1.5 metres above the test chamber floor in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.
8. Radiated spurious emission testing between 150 kHz and 30 MHz was performed for support of the NFC test report. No spurious emissions were observed above the noise floor of the measurement system.

5.2.9. Transmitter Radiated Emissions at Band Edges - LAT**Test Summary:**

Test Engineers:	SunGil Park & Nigel Davison	Test Date:	20 July 2016
Test Sample IMEI:	358640070286456		

FCC Reference:	Parts 2.1053 & 27.53(m)(4)
Test Method Used:	KDB 971168 Section 6.1 referencing FCC Part 27.53(m)(6)

Environmental Conditions:

Temperature (°C):	23
Relative Humidity (%):	36

Note(s):

1. Measurements were performed with the EUT transmitting with QPSK and 16QAM modulation schemes, with resource blocks settings as detailed in section 4.3 of this report.
2. 5 MHz Channel bandwidth: In the first 1.0 MHz immediately outside and adjacent to the operating band, the test receiver resolution bandwidth was set to 100 kHz (>2% of the emission bandwidth) and video bandwidth of 300 kHz (three times the resolution bandwidth).
3. 10 MHz Channel bandwidth: In the first 1.0 MHz immediately outside and adjacent to the operating band, the test receiver resolution bandwidth was set to 200 kHz (>2% of the emission bandwidth) and video bandwidth of 1 MHz (as close to > three times the resolution bandwidth as the test receiver allowed).
4. 15 MHz Channel bandwidth: In the first 1.0 MHz immediately outside and adjacent to the operating band, the test receiver resolution bandwidth was set to 300 kHz (>2% of the emission bandwidth) and video bandwidth of 1 MHz (as close to > three times the resolution bandwidth as the test receiver allowed).
5. 20 MHz Channel bandwidth: In the first 1.0 MHz immediately outside and adjacent to the operating band, the test receiver resolution bandwidth was set to 500 kHz (>2% of the emission bandwidth) and video bandwidth of 2 MHz (as close to > three times the resolution bandwidth as the test receiver allowed).
6. Lower Band Edge plots have been taken with a limit line set at -10 dBm. In accordance with Part 27.53(m)(4), the results table has a limit of -13 dBm.

5.2.10. Transmitter Radiated Emissions at Band Edges - UAT**Test Summary:**

Test Engineers:	SunGil Park & Nigel Davison	Test Date:	20 July 2016
Test Sample IMEI:	358640070309175		

FCC Reference:	Parts 2.1053 & 27.53(m)(4)
Test Method Used:	KDB 971168 Section 6.1 referencing FCC Part 27.53(m)(6)

Environmental Conditions:

Temperature (°C):	23
Relative Humidity (%):	36

Note(s):

1. Measurements were performed with the EUT transmitting with QPSK and 16QAM modulation schemes, with resource blocks settings as detailed in section 4.3 of this report.
2. 5 MHz Channel bandwidth: In the first 1.0 MHz immediately outside and adjacent to the operating band, the test receiver resolution bandwidth was set to 100 kHz (>2% of the emission bandwidth) and video bandwidth of 300 kHz (three times the resolution bandwidth).
3. 10 MHz Channel bandwidth: In the first 1.0 MHz immediately outside and adjacent to the operating band, the test receiver resolution bandwidth was set to 200 kHz (>2% of the emission bandwidth) and video bandwidth of 1 MHz (as close to > three times the resolution bandwidth as the test receiver allowed).
4. 15 MHz Channel bandwidth: In the first 1.0 MHz immediately outside and adjacent to the operating band, the test receiver resolution bandwidth was set to 300 kHz (>2% of the emission bandwidth) and video bandwidth of 1 MHz (as close to > three times the resolution bandwidth as the test receiver allowed).
5. 20 MHz Channel bandwidth: In the first 1.0 MHz immediately outside and adjacent to the operating band, the test receiver resolution bandwidth was set to 500 kHz (>2% of the emission bandwidth) and video bandwidth of 2 MHz (as close to > three times the resolution bandwidth as the test receiver allowed).
6. Lower Band Edge plots have been taken with a limit line set at -10 dBm. In accordance with Part 27.53(m)(4), the results table has a limit of -13 dBm.

5.2.11. Transmitter Frequency Stability (Temperature Variation)**Test Summary:**

Test Engineer:	Stefan Ho	Test Dates:	03 June 2016 & 09 June 2016
Test Sample IMEI:	358640070266615		

FCC Reference:	Parts 2.1055 & 27.54
Test Method Used:	KDB 971168 Section 9.0 referencing ANSI TIA-603-D-2010 Section 2.2.2 and FCC Part 2.1055

Environmental Conditions:

Ambient Temperature (°C):	23
Ambient Relative Humidity (%):	46 to 48

Note(s):

1. Flying leads were connected internally to the EUT in place of the battery. These leads extended and connected to a bench power supply at the nominal voltage of 3.8 V.
2. Frequency error was measured using a calibrated Rohde and Schwarz CMW 500 Universal Radio Communications Tester in accordance with current Rohde and Schwarz application notes. The EUT was connected by suitable RF cables to the CMW 500. A bi-directional communications link was established between the EUT and CMW 500. The frequency meter value was recorded.
3. Temperature was monitored throughout the test with a calibrated digital thermometer.

Test setup:

Transmitter Frequency Stability (Temperature Variation) (continued)**Results: Bottom Channel (2498.5 MHz)**

Temperature (°C)	Frequency Error (Hz)	Measured Frequency (MHz)	Lower Band Edge Limit (MHz)	Margin (MHz)	Result

6. Measurement Uncertainty

No measurement or test can ever be perfect and the imperfections give rise to error of measurement in the results. Consequently the result of a measurement is only an approximation to the value of the measurand (the specific quantity subject to measurement) and is only complete when accompanied by a statement of the uncertainty of the approximation.

The expression of uncertainty of a measurement result allows realistic comparison of results with reference values and limits given in specifications and standards.

The uncertainty of the result may need to be taken into account when interpreting the measurement results.

The reported expanded uncertainties below are based on a standard uncertainty multiplied by an appropriate coverage factor such that a confidence level of approximately 95% is maintained. For the purposes of this document "approximately" is interpreted as meaning "effectively" or "for most practical purposes".

Measurement Type	Range	Confidence Level (%)	Calculated Uncertainty
Conducted Output Power	2496 to 2690 MHz	95%	± 1.36 dB
Frequency Stability	2496 to 2690 MHz	95%	± 23 Hz
Occupied Bandwidth	2496 to 2690 MHz	95%	± 3.92 %
Conducted Spurious Emissions	2496 to 2690 MHz	95%	± 2.62 dB
Radiated Spurious Emissions	30 MHz to 1 GHz	95%	± 5.65 dB
Radiated Spurious Emissions	1 GHz to 26 GHz	95%	± 2.94 dB

The methods used to calculate the above uncertainties are in line with those recommended within the various measurement specifications. Where measurement specifications do not include guidelines for the evaluation of measurement uncertainty the published guidance of the appropriate accreditation body is followed.

7. Report Revision History

Version Number	Revision Details		
	Page No(s)	Clause	Details
1.0	-	-	Initial Version
2.0	-	-	Updates as requested by the TCB
3.0	-	-	Updates as requested by the TCB
