TEST PROCEDURES

KDB 842590 D01 Upper Microwave Flexible Use Service v01r02 Section 4.5
ANSI C63.26-2015 Section 5.6

Test procedures for temperature variation:

- Position the EUT in temperature/humidity chamber with power off.
 - Set chamber temperature to -30°C and stabilize the EUT for at least 30 minutes.
 - Record maximum change in frequency within one minute after powering the EUT.
 - Increase chamber temperature at 10°C intervals from -30°C to 50°C. Record maximum change in frequency at each temperature.
 - A period of at least 30 minutes is provided to allow stabilization of the equipment at each temperature level.
- Temp. = -30°C to +50°C

Test procedures for voltage variation:

- Position the EUT in temperature/humidity chamber with power off.
 - Set chamber temperature to 20°C.
 - Record maximum frequency change within one minute after powering the EUT.
 - The primary supply voltage is varied from 85% to 115% of the nominal value for hand-carried, battery-powered equipment. primary supply voltage is reduced to the battery operating end point which shall be specified by the manufacturer.
- Voltage = (85% - 115%)
 - Nominal: 3.8 VDC; Low: 3.32 VDC; High: 4.37 VDC

The measurements were performed with the CW signal of center frequency of each frequency band. Testing of n258 SB1 and n261 bands on Ant M2 represent the performance of Chipset 1. Likewise, testing of n258 SB2 and n260 bands on Ant M3, represent the performance of Chipset 2.

The occupied bandwidths (Section 8.1) are smaller than the channel bandwidths by at least 2.5 MHz for all modes of operation, the signal is at least 1.25 MHz from either edge of the channel. As the channels are fully contained within the FCC-allocated bands, and the frequency stability is significantly less than 1.25 MHz, with maximum frequency shift of 101.9 kHz over the test conditions (Ant M3 n260 at 50°C). The signal is always contained within the allocated channel, therefore, always contained within the allocated band.

The VDI product(s) in this shipment meet(s) the guidelines for performance specifications established in accordance with the corresponding Purchase Order. Data presented in the User Guide, where applicable, has been obtained in accordance with VDI's Quality Management System. All instruments, used to obtain data, which require calibration have been calibrated with equipment traceable to the National Institute of Standards and Technology (NIST) and through NIST to the International System of Units (SI).
