

TEST REPORT

Test Report No. : UL-RPT-RP11161473JD06A

Manufacturer : Apple Inc.
Model No. : A1706
FCC ID : BCGA1706
Technology : WLAN
Test Standard(s) : FCC Parts 15.209(a) & 15.247

1. This test report shall not be reproduced in full or partial, without the written approval of UL VS LTD.
2. The results in this report apply only to the sample(s) tested.
3. The sample tested is in compliance with the above standard(s).
4. The test results in this report are traceable to the national or international standards.
5. Version 1.0

Date of Issue: 28 September 2016

Checked by:

Sarah Williams
Engineer, Radio Laboratory

Company Signatory:

Steven White
Service Lead, Radio Laboratory
UL VS LTD

This laboratory is accredited by UKAS.
The tests reported herein have been
performed in accordance with its terms
of accreditation.

1. Customer Information

Company Name:	Apple
Address:	1 Infinite Loop Cupertino, CA 95014 U.S.A

2. Summary of Testing

2.1. General Information

Specification Reference:	47CFR15.247
Specification Title:	Code of Federal Regulations Volume 47 (Telecommunications): Part 15 Subpart C (Intentional Radiators) - Section 15.247
Specification Reference:	47CFR15.209
Specification Title:	Code of Federal Regulations Volume 47 (Telecommunications): Part 15 Subpart C (Intentional Radiators) - Section 15.209
Site Registration:	209735
Location of Testing:	UL VS LTD, Unit 3 Horizon, Wade Road, Kingsland Business Park, Basingstoke, Hampshire, RG24 8AH, United Kingdom
Test Dates:	07 August 2016 to 23 September 2016

2.2. Summary of Test Results

FCC Reference (47CFR)	Measurement	Result
Part 15.247(a)(2)	Transmitter Minimum 6 dB Bandwidth	Complied
Part 15.35(c)	Transmitter Duty Cycle	Note 1
Part 15.247(e)	Transmitter Power Spectral Density	Complied
Part 15.247(b)(3)	Transmitter Maximum (Average) Output Power	Complied
Part 15.247(d) & 15.209(a)	Transmitter Radiated Emissions	Complied
Part 15.247(d) & 15.209(a)	Transmitter Band Edge Radiated Emissions	Complied

Note(s):

1. For the data rates declared as worst cases and tested in this test report, duty cycle was measured to be greater than 98%. Plots for these measurements are archived on the company server and available for inspection upon request

2.3. Methods and Procedures

Reference:	ANSI C63.10-2013
Title:	American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices
Reference:	KDB 558074 D01 DTS Meas Guidance v03r05 April 8, 2016
Title:	Guidance for Performing Compliance Measurements on Digital Transmission Systems (DTS) Operating Under §15.247
Reference:	KDB 662911 D01 Multiple Transmitter Output v02r01 October 31, 2013
Title:	Emissions Testing of Transmitters with Multiple Outputs in the Same Band

2.4. Deviations from the Test Specification

For the measurements contained within this test report, there were no deviations from, additions to, or exclusions from the test specification identified above.

3. Equipment Under Test (EUT)

3.1. Identification of Equipment Under Test (EUT)

Brand Name:	Apple
Model Name or Number:	A1706
Test Sample Serial Number:	C02S200CHH5Q (<i>Conducted sample with RF ports</i>)
Hardware Version:	EVT
Software Version:	OS: 16B2272a WLAN: 7.21.171.5
FCC ID:	BCGA1706

Brand Name:	Apple
Model Name or Number:	A1706
Test Sample Serial Number:	C02S2003HH5Y (<i>Radiated sample #1</i>)
Hardware Version:	EVT
Software Version:	OS: 16B2272a WLAN: 7.21.171.5
FCC ID:	BCGA1706

Brand Name:	Apple
Model Name or Number:	A1706
Test Sample Serial Number:	C02S200EHH5Q (<i>Radiated sample #2</i>)
Hardware Version:	EVT
Software Version:	OS: 16B2272a WLAN: 7.21.171.5
FCC ID:	BCGA1706

Brand Name:	Apple
Model Name or Number:	A1706
Test Sample Serial Number:	C02S200CHH5W (<i>Radiated sample #3</i>)
Hardware Version:	EVT
Software Version:	OS: 16B2272a WLAN: 7.21.171.5
FCC ID:	BCGA1706

3.2. Description of EUT

The equipment under test was a Notebook PC with 2.4 GHz and 5 GHz wireless LAN and Bluetooth capabilities.

3.3. Modifications Incorporated in the EUT

No modifications were applied to the EUT during testing.

3.4. Additional Information Related to Testing

Technology Tested:	WLAN (IEEE 802.11b,g,n) / Digital Transmission System	
Type of Unit:	Transceiver	
Modulation Type:	DBPSK, DQPSK, BPSK, QPSK, 16QAM & 64QAM	
Data Rates:	802.11b	1, 2, 5.5 & 11 Mbit/s
	802.11g	6, 9, 12, 18, 24, 36, 48 & 54 Mbit/s
	802.11n HT20	MCS0 to MCS7 (1 spatial stream with either SISO or 2/3-chain MIMO CDD/TxBF operation) MCS8 to MCS15 (2 spatial streams on 2 transmit chains w/ or w/o TxBF) MCS16 to MCS23 (3 spatial streams on 3 transmit chains w/ or w/o TxBF)
Power Supply Requirement(s):	Nominal	3.8 VDC via 120 VAC 60 Hz adaptor
Maximum Conducted Output Power:	16.7 dBm	
Declared Antenna Gain:	Port 1:	2.0 dBi
	Port 2:	3.3 dBi
	Port 3:	2.3 dBi
Directional Antenna Gain: (see Note 1)	Ports 2 & 3	5.8 dBi
	Ports 1, 2 & 3	7.3 dBi
Channel Spacing:	20 MHz	
Transmit Frequency Range:	2400 MHz to 2483.5 MHz	
Transmit Channels Tested:	Channel Number	Channel Frequency (MHz)
	1	2412
	2	2417
	3	2422
	6	2437
	7	2442
	11	2462
	12	2467
	13	2472

Note(s):

1. Detailed calculations can be found in Appendix 2.

3.5. Support Equipment

The following support equipment was used to exercise the EUT during testing:

Description:	Test Laptop
Brand Name:	Apple
Model Name or Number:	MacBook Pro
Serial Number:	C2QLQ03XF9F2

Description:	AC to DC Power adaptor
Brand Name:	Apple
Model Name or Number:	A1718
Serial Number:	Not marked or stated

Description:	USB-C Charge Cable (2 m)
Brand Name:	Apple
Model Name or Number:	Not marked or stated
Serial Number:	Not marked or stated

Description:	Personal Hands Free (PHF)
Brand Name:	Apple
Model Name or Number:	Apple Ear Plugs
Serial Number:	Not marked or stated

Description:	USB-A to USB-C adaptor (x3)
Brand Name:	Apple
Model Name or Number:	A1632
Serial Number:	Not marked or stated

Description:	USB Hub
Brand Name:	Belkin
Model Name or Number:	Not marked or stated
Serial Number:	Not marked or stated

4. Operation and Monitoring of the EUT during Testing

4.1. Operating Modes

The EUT was tested in the following operating mode(s):

- The customer declared the worst case SISO and MIMO modes for testing which were:
 - o 802.11b: 1 Mbit/s / SISO on Port 2
 - o 802.11g: 6 Mbit/s / SISO on Port 2
 - o 802.11n HT20: MCS0 / SISO on Port 2
 - o 802.11n HT20: MCS0 / MIMO (2Tx CDD) on Ports 2 & 3
 - o 802.11n HT20: MCS0 / MIMO (3Tx CDD) on Ports 1, 2 & 3
 - o 802.11n HT20: MCS0 / MIMO (2Tx CDD with TxBF) on Ports 2 & 3
 - o 802.11n HT20: MCS0 / MIMO (3Tx CDD with TxBF) on Ports 1, 2 & 3
- All the above listed modes were tested on the EUT. The beamforming (TxBF) modes were found to have the same power or lesser than the equivalent non-TxBF modes and have therefore been excluded from this report. All plots are archived securely on the UL VS IT server and are available for inspection upon request.
- Non-TxBF modes: Continuously transmitting (100% duty cycle) a modulated carrier at target power levels in the above modes and on channels given in section 3.4.
- TxBF modes: Transmitting a modulated carrier with maximum possible duty cycle at target power levels in the above modes and on channels given in section 3.4.
- For the Transmitter Minimum 6 dB Bandwidth test, only SISO modes were tested since the bandwidth does not change depending on chains used.

4.2. Configuration and Peripherals

The EUT was tested in the following configuration(s):

- For continuous transmit tests, the EUT's WLAN radio was controlled directly by using the supplied chipset manufacturer's 'wl' commands. These were run from within a terminal window on the EUT. The commands used could enable continuous transmission and allowed the selection of test channels, antennas, modes, data rates and modulation schemes as required.
- For TxBF modes, the EUT was communicating via a conducted RF link with an identical device. The EUT ran iPerf bandwidth testing application in client mode to produce maximum throughput.
- The customer supplied U.FL RF cables with the EUT in order to perform conducted measurements. This measured additional path loss was measured and included in any path loss calculations.
- Radiated Emissions testing was performed with the EUT in normal position and whilst charging through its power supply. All ports on the EUT were populated with applicable cables and terminations during the test.

5. Measurements, Examinations and Derived Results

5.1. General Comments

Measurement uncertainties are evaluated in accordance with current best practice. Our reported expanded uncertainties are based on standard uncertainties, which are multiplied by an appropriate coverage factor to provide a statistical confidence level of approximately 95%. Please refer to *Section 6. Measurement Uncertainty* for details.

In accordance with UKAS requirements all the measurement equipment is on a calibration schedule. All equipment was within the calibration period on the date of testing.

5.2. Test Results

5.2.1. Transmitter Minimum 6 dB Bandwidth

Test Summary:

Test Engineer:	Sandeep Bharat	Test Dates:	02 September 2016 & 05 September 2016
Test Sample Serial Number:	C02S200CHH5Q		

FCC Reference:	Part 15.247(a)(2)
Test Method Used:	FCC KDB 558074 Section 8.1

Environmental Conditions:

Temperature (°C):	23 to 24
Relative Humidity (%):	45 to 53

Note(s):

- For the Transmitter Minimum 6 dB Bandwidth test, only the following SISO modes were tested since the bandwidth does not change depending on chains used:
 - 802.11b – 1 Mbit/s / SISO on Port 2
 - 802.11g – 6 Mbit/s / SISO on Port 2
 - 802.11n HT20 – MCS0 / SISO on Port 2
- Final measurements were performed using the above configurations on the bottom, middle and top channels in accordance with KDB 558074 Section 8.1 Option 1 measurement procedure. Additional channels were tested as requested by the customer. The signal analyser resolution bandwidth was set to 100 kHz and video bandwidth 300 kHz. A peak detector was used, sweep time was set to auto and the trace mode was Max Hold. The span was set to 30 MHz. The DTS bandwidth was measured at 6 dB down from the peak of the signal.
- The signal analyser was connected to the RF port on the EUT using suitable attenuation and RF cable.

Test setup:

Transmitter Minimum 6 dB Bandwidth (continued)**Results: 802.11b / 20 MHz / DBPSK / 1 Mbit/s / Port 2**

5.2.2. Transmitter Power Spectral Density**Test Summary:**

Test Engineer:	Sandeep Bharat	Test Dates:	02 September 2016 to 05 September 2016
Test Sample Serial Number:	C02S200CHH5Q		

FCC Reference:	Part 15.247(e)
Test Method Used:	FCC KDB 558074 Section 10.3

Environmental Conditions:

Temperature (°C):	23 to 24
Relative Humidity (%):	45 to 53

Note(s):

- The customer declared the following data rates to be used for all measurements:
 - o 802.11b – 1 Mbit/s / SISO on Port 2
 - o 802.11g – 6 Mbit/s / SISO on Port 2
 - o 802.11n HT20 – MCS0 / SISO on Port 2
 - o 802.11n HT20 – MCS0 / MIMO (2Tx CDD) on Ports 2 & 3
 - o 802.11n HT20 – MCS0 / MIMO (3Tx CDD) on Ports 1, 2 & 3
- Final measurements were performed using the above configurations on the bottom, middle and top channels. Additional channels were tested as requested by the customer.
- Testing was performed in accordance with KDB 558074 Section 10.3 Method AVGPSSD-1. The signal analyser resolution bandwidth was set to 100 kHz and video bandwidth to 300 kHz. An RMS detector was used and sweep time set manually to perform trace averaging over 300 traces. The span was set to at least 1.5 times the 99% occupied emission bandwidth (see Appendix 1 for reference plots). The highest peak of the measured signal was recorded.
- For 802.11n MIMO, PSD was measured on both ports and then combined using the *measure and sum spectral maxima across the outputs* technique, stated in FCC KDB 662911 D01 Section E)2)a).
- The signal analyser was connected to the RF port on the EUT using suitable attenuation and RF cable. An RF level offset was entered on the signal analyser to compensate for the loss of the attenuator and RF cable.

5.2.3. Transmitter Maximum (Average) Output Power**Test Summary:**

Test Engineer:	Sandeep Bharat	Test Dates:	05 September 2016 to 23 September 2016
Test Sample Serial Number:	C02S200CHH5Q		

FCC Reference:	Part 15.247(b)(3)
Test Method Used:	FCC KDB 558074 Section 9.2.2.2

Environmental Conditions:

Temperature (°C):	23 to 25
Relative Humidity (%):	45 to 57

Note(s):

1. The customer declared the following data rates to be used for all measurements:
 - o 802.11b – 1 Mbit/s / SISO on Port 2
 - o 802.11g – 6 Mbit/s / SISO on Port 2
 - o 802.11n HT20 – MCS0 / SISO on Port 2
 - o 802.11n HT20 – MCS0 / MIMO (2Tx CDD) on Ports 2 & 3
 - o 802.11n HT20 – MCS0 / MIMO (3Tx CDD) on Ports 1, 2 & 3
2. Final measurements were performed using the above configurations on the bottom, middle and top channels. Additional channels were tested as requested by the customer.
3. The power has been integrated over the 99% occupied bandwidth (OBW) see Appendix 1 for reference plots.
4. The EUT was transmitting at 100% duty cycle and testing was performed in accordance with KDB 558074 Section 9.2.2.2 Method AVGSA-1. The signal analyser's integration function was used to integrate across the OBW. The signal analyser resolution bandwidth was set to 1-5% of the OBW and video bandwidth to at least 3 times the resolution bandwidth. An RMS detector was used and sweep time set manually to perform trace averaging over 300 traces. The span was set to at least 1.5 times the 99% occupied emission bandwidth.
5. For 802.11n MIMO, conducted power was measured on all ports and then combined using the measure-and-sum technique stated in FCC KDB 662911 D01 Section E)1). For EIRP, the directional antenna gain as calculated in FCC KDB 662911 D01 Section 2)f)(ii) was added to the conducted output power. Detailed calculations can be found in Appendix 2 (Directional Antenna Gain Calculations).
6. The signal analyser was connected to the RF ports on the EUT using suitable attenuation and RF cables. An RF level offset was entered on the signal analyser to compensate for the loss of the attenuator and RF cables.
7. For MIMO (3Tx CDD) modes, the limit for conducted output power has been reduced by the same amount in dB that the directional gain of the antennas exceeds 6 dBi, in accordance with 15.247(b)(4).

Transmitter Maximum (Average) Output Power (continued)**Test setup:****Results: 802.11b / 20 MHz / DBPSK / 1 Mbit/s / Port 2****Conducted Peak Limit Comparison**

5.2.4. Transmitter Radiated Emissions**Test Summary:**

Test Engineers:	Stuart Martin, Nick Steele & Georgios Vrezas	Test Dates:	28 August 2016 to 04 September 2016
Test Sample Serial Number:	C02S2003HH5Y		

FCC Reference:	Parts 15.247(d) & 15.209(a)
Test Method Used:	ANSI C63.10 Sections 6.3 and 6.5
Frequency Range	30 MHz to 1000 MHz

Environmental Conditions:

Temperature (°C):	20 to 25
Relative Humidity (%):	35 to 55

Note(s):

1. The final measured value, for the given emission, in the table below incorporates the calibrated antenna factor and cable loss.
2. Although all the modes listed in Section 4.1 of this report were tested, only the middle channel plots for the worst case mode with respect to power have been included in this section. Other channels and modes were seen to produce similar results and have therefore been excluded from this report. All plots are archived securely on the UL VS IT server and are available for inspection upon request.
3. All emissions shown on the pre-scan plots were investigated and found to be ambient, or >20 dB below the applicable limit or below the measurement system noise floor. Therefore the highest peak noise floor reading of the measuring receiver was recorded in the table below.
4. Measurements below 1 GHz were performed in a semi-anechoic chamber (Asset Number K0017) at a distance of 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.
5. Pre-scans were performed and markers placed on the highest measured levels. The test receiver resolution bandwidth was set to 100 kHz and video bandwidth 300 kHz. A peak detector was used, sweep time was set to auto and trace mode was Max Hold.

Transmitter Radiated Emissions (continued)**Test Summary:**

Test Engineers:	Stuart Martin, Nick Steele & Georgios Vrezas	Test Dates:	28 August 2016 to 04 September 2016
Test Sample Serial Numbers:	C02S2003HH5Y, C02S200EHH5Q & C02S200CHH5W		

FCC Reference:	Parts 15.247(d) & 15.209(a)
Test Method Used:	ANSI C63.10 Sections 6.3 and 6.6
Frequency Range	1 GHz to 25 GHz

Environmental Conditions:

Temperature (°C):	20 to 25
Relative Humidity (%):	35 to 55

Note(s):

- Although all the modes listed in Section 4.1 of this report were tested, only the middle channel plots for the worst case mode with respect to power have been included in this section. Other channels and modes were seen to produce similar results and have therefore been excluded from this report. All plots are archived securely on the UL VS IT server and are available for inspection upon request.
- The final measured value, for the given emission, in the table below incorporates the calibrated antenna factor and cable loss.
- No spurious emissions were detected above the noise floor of the measuring receiver therefore the highest peak and average noise floor readings of the measuring receiver were recorded as shown in the tables below.
- The emission shown approximately at 2437 MHz on the 1 GHz to 4 GHz plot is the EUT fundamental.
- Measurements were performed in an anechoic chamber (Asset Number K0017) at a distance of 3 metres. The EUT was placed at a height of 1.5 metres above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.
- Pre-scans were performed and a marker placed on the highest measured level of the appropriate plot. The test receiver resolution bandwidth was set to 1 MHz and video bandwidth 3 MHz. The sweep time was set to auto.

Results: Peak / Middle Channel / 802.11n / HT20 / MCS0 / MIMO (3Tx CDD) on Ports 1, 2 & 3

5.2.5. Transmitter Band Edge Radiated Emissions**Test Summary:**

Test Engineers:	Stuart Martin, Andrew Edwards, Nick Steele & Georgios Vrezas	Test Dates:	08 August 2016 to 27 September 2016
Test Sample Serial Numbers:	C02S2003HH5Y, C02S200EHH5Q & C02S200CHH5W		

FCC Reference:	Parts 15.247(d) & 15.209(a)
Test Method Used:	ANSI C63.10 Section 6.10 & FCC KDB 558074 Sections 11 & 12

Environmental Conditions:

Temperature (°C):	20 to 25
Relative Humidity (%):	35 to 55

Note(s):

- The customer declared the following data rates to be used for all measurements as:

- o 802.11b – 1 Mbit/s / SISO on Port 2
- o 802.11g – 6 Mbit/s / SISO on Port 2
- o 802.11n HT20 – MCS0 / SISO on Port 2
- o 802.11n HT20 – MCS0 / MIMO (2Tx CDD) on Ports 2 & 3
- o 802.11n HT20 – MCS0 / MIMO (3Tx CDD) on Ports 1, 2 & 3

Final measurements were performed with the above configurations.

- The final measured value, for the given emission, in the table below incorporates the calibrated antenna factor and cable loss.
- As the lower band edge falls within a non-restricted band, only peak measurements are required. In accordance with FCC KDB 558074 Section 11.1, the test method in Section 11.3 was followed: the test receiver resolution bandwidth was set to 100 kHz and video bandwidth 300 kHz. A peak detector was used, sweep time was set to auto and trace mode was Max Hold. The test receiver was left to sweep for a sufficient length of time in order to maximise the carrier level and out-of-band emissions. A marker and corresponding reference level line were placed on the peak of the carrier. As the maximum conducted (average) output power was measured using an RMS detector in accordance with FCC KDB 558074 Section 9.2.2.4 an out-of-band limit line was placed 30 dB (FCC KDB 558074 Section 11.1(b)) below the peak level. A marker was placed on the band edge spot frequencies and a second marker placed on the highest emission level in the adjacent non-restricted band of operation (where a higher level emission was present). Marker frequencies and levels were recorded.
- As the upper band edge falls within a restricted band both peak and average measurements were recorded by placing a marker at the edge of the band. For peak measurements the test receiver resolution bandwidth was set to 1 MHz and the video bandwidth 3 MHz. A peak detector was used, sweep time was set to auto and 100 traces performed. For average measurements the test receiver resolution bandwidth was set to 1 MHz and the video bandwidth 3 MHz. An RMS detector was used, sweep time was set to auto and 100 traces performed. A marker was placed on the band edge spot frequencies and a second marker placed on the highest emission level in the adjacent restricted band of operation (where a higher level emission was present). Marker frequencies and levels were recorded.
- There is a restricted band 10 MHz below the lower band edge. The test receiver was set up as follows: the RBW set to 1 MHz, the VBW set to 3 MHz, with the sweep time set to auto couple. Peak and average measurements were performed with their respective detectors. Markers were placed on the highest point on each trace.
