7.5 Peak-Average Ratio

§24.232(d) RSS-132(5.4) RSS-133(6.4) RSS-139(6.5)

Test Overview

A peak to average ratio measurement is performed at the conducted port of the EUT. The spectrum analyzers Complementary Cumulative Distribution Function (CCDF) measurement profile is used to determine the largest deviation between the average and the peak power of the EUT in a given bandwidth. The CCDF curve shows how much time the peak waveform spends at or above a given average power level. The percent of time the signal spends at or above the level defines the probability for that particular power level.

Test Procedure Used

KDB 971168 D01 v03 – Sections 5.7.1, 5.7.2
ANSI C63.26-2015 – Section 5.2.3, 5.2.4, 5.2.6

Test Settings

Emission Band Width $\leq$ 10MHz:

1. The signal analyzer's CCDF measurement profile is enabled
2. Frequency = carrier center frequency
3. Measurement BW > Emission bandwidth of signal
4. The signal analyzer was set to collect one million samples to generate the CCDF curve
5. The measurement interval was set depending on the type of signal analyzed. For continuous signals (>98% duty cycle), the measurement interval was set to 1ms. For burst transmissions, the spectrum analyzer is set to use an internal "RF Burst" trigger that is synced with an incoming pulse and the measurement interval is set to less than the duration of the "on time" of one burst to ensure that energy is only captured during a time in which the transmitter is operating at maximum power

Emission Band Width $\geq$ 10MHz

Some regulatory requirements specify a Peak-to-Average Power Ratio limit when the output power limits are specified in terms of average power. If it becomes necessary to provide measurement data to demonstrate compliance to a Peak-to-Average Power Ratio limit, then the appropriate procedures were followed described in ANSI C63.26 to determine the Peak PSD and the Average PSD). The data from these measurements is then used in the following equation,

$$\text{Peak-to-Average Power Ratio (dB)} = \text{PPk (dBm)} - \text{PAvg (dBm)}$$

Where,

PPk = peak PSD level (dBm)

PAvg= average PSD level (dBm)
