

All-new Photos tab. View your new photos and memories by day, month, or year. It's easier than ever to relive a specific moment by finding photos from that day—or click All Photos to quickly view your entire collection.

Relive meaningful moments. New Live Photos and videos that begin playing as you scroll bring your memories to life. Animations and transitions keep your place in the timeline switching between views, so you can switch between any view—like Days and All Photos—without losing your place.

People and Places. Photos understands your photos—who's in them and what's happening—to highlight important moments like birthdays, anniversaries, and trips. Make someone a favorite by clicking the Favorite button ♥ that appears on their photo, and they'll always appear at the top of the album. Use the Places album to view all your photos with location data on an interactive map. Zoom in on the map to reveal more photos from a specific location.

 **Tip:** You can add location info to any photo. While viewing the photo, click the Information button ⓘ, click Assign a Location, then start typing. Choose your location from the list, or type it and press Return.

Find the perfect shot. Search your photos based on what's in them, the date they were taken, people you've named in them, and their location—if provided. Photos identifies objects, scenes, and people, so you don't have to use keywords to tag each photo.

Best shots. Photos intelligently showcases the best shots in your library, removing duplicates and clutter.

Memory Movies. Now you can view Memory Movies on your Mac, and edit the duration, mood, and title. Edits sync to your other devices using iCloud Photos. Memory titles add additional fonts and avoid overlapping faces.

Get lively. With Live Photos, use the new Loop effect to continuously loop the action, or use Bounce to play the animation forward and backward. You can also use Long Exposure to blur motion in your Live Photos.

Podcasts

Use Apple Podcasts to browse, subscribe, and listen to favorite podcasts on your Mac.

Get started with Listen Now. Any podcasts you're in the middle of will be saved in Listen Now, even if you started listening from another device. You'll also see new episodes for the podcasts you're subscribed to, as well as personalized recommendations for podcasts you might be interested in.

 **Ask Siri.** Say something like "Continue playing the last podcast."

Save episodes to your library. To save a single episode to your library, click **+**. To keep up with new episodes for an entire podcast, click **Subscribe**. To download a podcast for offline listening, click .

Discover new podcasts. Find a curated feed of new podcasts in **Browse**, or see which shows are trending in **Top Charts**. If you see a show you like, subscribe to the podcast or add an episode to your library for later.

Search by host or guest. When you search for a specific topic or person, you can see results for shows they host, shows that they're a guest on, and even shows where they're mentioned or discussed.

 **Tip:** To play music or radio from a speaker using AirPlay, click the AirPlay icon  in the menu bar and select an available speaker.

Reminders

Reminders makes it easier than ever to keep track of all of your to-dos. Create and organize reminders for grocery lists, projects at work, or anything else you want to track. You can also choose when and where to receive reminders.

Keep track with smart lists. Smart lists automatically sort your upcoming reminders into four categories. Select Today to see all your reminders scheduled for today, as well as any overdue reminders. Select Scheduled to see your reminders with dates and times in one chronological view. Select Flagged to see reminders you've marked as important. Select All to see all your reminders in one place.

Work quickly with edit buttons. When you type, edit buttons appear below the reminder. Add dates, times, and locations so you can be reminded when and where you want. Click the flag icon  to mark a reminder as important.

Add attachments. Make your reminders more useful by attaching photos, document scans, or links. To add an attachment, click the Edit Details button , then choose Add image or Add URL. Or drag attachments from other apps, like an event from Calendar.

Organize with subtasks and groups. To turn a reminder into a subtask, press Command-], or drag it on top of another reminder. The parent reminder becomes bold, and the subtask is indented underneath it. You can collapse or expand your subtasks to keep your view uncluttered.

To group reminders together, choose File > New Group. Name the group whatever you'd like. Add more lists by dragging them into the group, or remove them by dragging them out.

Customize list appearance. Double-click the icon of the list you want to customize. Click the icon in the info menu, then pick your preferred colors and symbols.

Use Siri to create reminders. You can ask Siri to schedule a reminder for you. For example, say "Remind me to call mom at eight."

Siri also works great when you're typing. Just type your reminder, and Siri understands more detailed sentences and provides relevant suggestions for when to remind you. For example, write "Take Amy to soccer every Wednesday at 5PM" to create a repeating reminder on that day and time.

Be reminded when you text. Click the Edit Details button ⓘ, select When Messaging a Person, and enter someone's name. The next time you chat with them in Messages, you'll be reminded that now might be a good time to talk.

Safari

Safari is the fastest and most efficient way to surf the web on your Mac. An updated start page includes Favorites, frequently and recently visited websites, Siri Suggestions for relevant websites in your browsing history, bookmarks, Reading List, iCloud tabs, and links sent to you in Messages.

Start searching. Click the Smart Search field at the top of the window to see websites you've added as favorites. Or start typing a word or website address—Safari shows you matching websites, as well as Safari Suggestions.

Type what you're looking for or click a favorite.

View multiple websites in one window. Click **+** at the far right of the tab bar or press Command-T to open a new tab, then enter an address. To keep a website handy, drag its tab left to pin it, and it stays in the tab bar.

Drag a tab to the left to pin it in the tab bar.

See what's open on each of your devices. You can see open webpages on all your devices that are signed in to the same Apple ID. Just click the Show All Tabs button  at the top of the window and scroll down if necessary.

Browse the web safely and privately. Safari warns you when you visit a website that's not secure, or that may be trying to trick you into sharing your personal data. Safari also protects you automatically from cross-site tracking, by identifying and removing the data that trackers leave behind. Safari asks your permission before allowing a social network to see what you're doing on third-party sites. For example, if you click a Facebook button to share an article to Facebook, Safari asks if you want to let Facebook see your activity on the site. And Safari defends you against web tracking by making your Mac harder to identify uniquely.

When you sign up for a new account on the web, Safari automatically creates and autofills a new strong password for you. If you choose Use Strong Password, the password is saved to your iCloud Keychain and will autofill on all the devices you log in to with the same Apple ID. You can ask Siri to show you your saved passwords, which you can see after entering the authentication password for your Mac, or go to Safari > Preferences and then click Passwords. Reused passwords are flagged in the passwords list, so you can easily replace them with strong passwords.

Note: Siri may not be available in all languages or in all areas, and features may vary by area.

Set up preferences for your favorite sites. If you often adjust settings for certain websites, you can use Safari preferences to save those settings. You can turn on your content blocker, enable Reader mode, allow notifications, set a specific page zoom, and more—just for the websites you choose. When you're visiting a website, choose Safari > Settings for This Website, or secondary click (that is, right-click) on the URL in the Smart Search field.

Open Picture in Picture. When you're playing a video, click and hold the Audio button  on the tab and choose Enter Picture in Picture from the submenu. Your video appears in a floating window that you can drag and resize, so you can watch while doing other things on your Mac. You can also set autoplay options in this submenu. To mute the sound from a video, click  once.

Stocks

The Stocks app is the best way to track the market on your Mac. View prices in the custom watchlist, click a stock to see more details and an interactive chart, and read about what's driving the market, with stories from Apple News.

The screenshot shows the 'Stocks' app interface. On the left is a 'Business News' section with a search bar and a list of stocks. The main area on the right is titled 'Top Stories' and features a large article about housing affordability, several smaller news snippets from CNN Business and Yahoo Finance, and a 'Dow Jones' section at the bottom.

Business News	From News
Dow Jones	26,029.52
Dow Jones Industrial Av...	+311.78
S&P 500	2,881.77
S&P 500	+37.03
AXP	122.55
American Express Comp...	+1.83
DIS	141.87
The Walt Disney Company	+3.57
GE	9.57
General Electric Company	-0.09
NKE	81.30
NIKE, Inc.	+2.33
SBUX	95.34
Starbucks Corporation	+1.64
WBA	51.45
Walgreens Boots Allianc...	-0.42
WMT	107.27
Walmart Inc.	+1.45
HD	208.80
The Home Depot, Inc.	+3.86
BA	208.80
The Boeing Company	+3.86

Note: Apple News stories and Top Stories are available in the U.S., Canada, the UK, and Australia. News stories in other countries and regions are provided by Yahoo.

Customize your watchlist. Click the edit button at the bottom of the list to customize stocks, indexes, currencies, and more. While viewing your watchlist, click the green or red button below each price to cycle between price change, percentage change, and market capitalization. The watchlist also includes color-coded sparklines that track performance throughout the day.

Read articles related to the companies you follow. Click a stock in your watchlist to see an interactive chart and additional details, and read the latest news about that company.

Get a deeper view. Want to see what the market was doing last week, last month, or last year? Click the buttons above the chart to switch timeframes and see prices in the view you like best.

Your watchlist on all your devices. Keep your watchlist consistent across all your devices when you sign in with the same Apple ID.

Tip: Click the Top Stories section in the watchlist to see a collection of timely business articles, curated by Apple News editors.
