Part 15.207	Transmitter AC Conducted Emissions	Complied

Note(s):

1. There are two vendors of the WiFi/*Bluetooth* radio modules, Vendor 1 and Vendor 2.

The WiFi/*Bluetooth* radio modules have the same mechanical outline (i.e. the same packaging dimension and pin layout), use the same on-board antenna matching circuit, have an identical antenna structure and are built and tested to conform to the same specification and to operate within the same tolerances.

Baseline testing was performed on the two vendors to determine the worst case.

1.4. Deviations from the Test Specification

For the measurements contained within this test report, there were no deviations from, additions to, or exclusions from the test specification identified above.

2. Summary of Testing

2.1. Facilities and Accreditation

The test site and measurement facilities used to collect data are located at Unit 3 Horizon, Wade Road, Kingsland Business Park, Basingstoke, Hampshire, RG24 8AH, United Kingdom.

UL VS LTD is accredited by UKAS. The tests reported herein have been performed in accordance with its terms of accreditation.

2.2. Methods and Procedures

2.3. Calibration and Uncertainty

Measuring Instrument Calibration

In accordance with UKAS requirements all the measurement equipment is on a calibration schedule. All equipment was within the calibration period on the date of testing.

Measurement Uncertainty

No measurement or test can ever be perfect and the imperfections give rise to error of measurement in the results. Consequently the result of a measurement is only an approximation to the value measured (the specific quantity subject to measurement) and is only complete when accompanied by a statement of the uncertainty of the approximation.

The expression of uncertainty of a measurement result allows realistic comparison of results with reference values and limits given in specifications and standards.

The uncertainty of the result may need to be taken into account when interpreting the measurement results.

The reported expanded uncertainties below are based on a standard uncertainty multiplied by an appropriate coverage factor such that a confidence level of approximately 95% is maintained. For the purposes of this document "approximately" is interpreted as meaning "effectively" or "for most practical purposes".

Measurement Type	Range	Confidence Level (%)	Calculated Uncertainty
AC Conducted Spurious Emissions	0.15 MHz to 30 MHz	95%	±1.96 dB

The methods used to calculate the above uncertainties are in line with those recommended within the various measurement specifications. Where measurement specifications do not include guidelines for the evaluation of measurement uncertainty the published guidance of the appropriate accreditation body is followed.

- The EUT was tested in the following operating mode(s): Pre-scans were performed with the EUT transmitting in *Bluetooth* EDR, *Bluetooth* LE, 2.4 GHz WLAN and 5.0 GHz WLAN modes individually or simultaneously. The worst case mode was found to be 2.4 GHz WLAN transmitting individually. Final measurements were performed in this configuration.

Configuration and Peripherals

The EUT was tested in the following configuration(s):

- Final measurements were performed with the EUT configured to transmit at maximum output power using 2.4 GHz WLAN on channel 7.
- Pre-scan plots for all configurations tested are archived on the UL VS LTD IT server and available for inspection if required.
- Controlled in test mode using a software application on the EUT 'MAC_WIFI.sh' supplied by the customer. The application was used to enable a continuous transmission and to select the test channels as required, The customer also supplied a document containing the setup instructions 'MAC_WIFI_SOP.docx'.
- The EUT was powered from a 120 VAC 60 Hz single phase mains supply unless otherwise stated.
- All the unused USB C ports were terminated into a USB hub.

Test Summary:

Test Engineer:	Nick Tye	Test Dates:	31 December 2019 & 03 January 2020
Test Sample Serial Number:	C02ZH002P1YX		

FCC Reference:	Part 15.207
Test Method Used:	ANSI C63.10 Section 6.2 / FCC KDB 174176 and notes below

Environmental Conditions:

Temperature (°C):	22 to 24
Relative Humidity (%):	36 to 42

Note(s):

1. The EUT was connected to a 120 VAC 60 Hz single phase supply via a LISN.
2. In accordance with FCC KDB 174176 Q4, tests were performed with a 240 VAC 60 Hz single phase supply as this was within the voltage range marked on the power supply.
3. A pulse limiter was fitted between the LISN and the test receiver.
4. Pre-scans were performed with the EUT transmitting *Bluetooth* EDR, *Bluetooth* LE, 2.4 GHz WLAN and 5 GHz WLAN modes individually, along with *Bluetooth* technology transmitting in combination with 5 GHz WLAN and 2.4 GHz WLAN transmitting in combination with 5 GHz WLAN.
5. The worst case mode observed during pre-scans was found to be the EUT with Vendor 2 radio modules when transmitting 2.4 GHz WLAN only. The final measurements were performed in this mode only. Pre-scan result plots for Vendor 1 modules / other modes are archived on the UL VS LTD IT server and available for inspection if required.
