Hi Mark,

1.

In response to your questions about this device being tested to the Part 15 Subpart B Class A limits for the digital device and justification as to how marketing and sales of this device are limited to commercial applications only and not sold to general consumers who would use this device in a residential environment, here is the applicant's response:

The device is an Apple proprietary network adaptor, intending to be used in factories, worldwide offices, including Apple Stores, only. It will not be sold to consumers. This device, along with its firmware is customized for specific use case and will optimize recognition or addition of a trusted device for security purpose. It has no use outside Apple including Apple stores and factories.

Thank you
