Internal photos

High power

A photograph showing the internal components of a microwave oven. The main components visible are the magnetron (a cylindrical metal component on the left), the waveguide (a metal duct connecting the magnetron to the cooking chamber), and the control panel (a white plastic unit on the right). The components are mounted on a metal chassis. Various wires and connectors are visible, including a red wire connected to the magnetron. The microwave is placed on a wooden surface.
