

The image shows the interior of a chassis door, which is a rectangular metal plate with a black border. It is mounted on a white surface. The door is secured with several screws around its perimeter. Two main components are visible: a 'Final PA' (Power Amplifier) module in the upper half and a 'Power Supply' module in the lower half. Both modules are silver-colored metal plates with various connectors and labels. The 'Final PA' module has a large copper-colored heat sink on its top left corner. The 'Power Supply' module has a label with technical specifications. Several cables, including blue, green, and black ones, are connected to the modules and run along the right side of the door. The entire assembly is held in place by a black frame.
