Subject: Follow-up Questions Regarding FCC ID: BEJGS500G 2-1-10

Dear Ms. Kim,

Thank you for your email.

In the revised SAR report, an incorrect BT SAR level is listed on p.22/109. Please revise to show the actual max stand-alone BT SAR measured in the PCTEST 2450 MHz SAR report (0.026 W/kg, and not 0.00106 W/kg).

If you have any questions, please do not hesitate to contact us. Thank you.

Sincerely,
PCTEST TCB

Subject: Request for additional information

In regards to your recent TCB application referenced above, we kindly request that you provide the following additional information.

1. Please correct the following typo: p.23/61 of the PCE EMC report, the top of the page lists WCDMA850 as the modulation signal instead of WCDMA1900.
→ [Please find the attachment.](#)
2. Please correct the following typo: p.3 of the JBP (15B) report lists an incorrect WCDMA1900 transmit frequency range (in 2 places).
→ [Please find the attachment.](#)
3. Page 23 of the SAR report lists the antenna separation distance as 1.0 cm, while the antenna location photo shows 0.7 cm. Please reconcile.
→ [Please find the attachment.](#)
4. Please provide 2450 MHz System Verification SAR results using the dominant tissue type (muscle) for the test dates. Please note that this is the same issue as in previous applications- we are waiting for you to submit the FCC's response to the SAR lab's request for relief from this requirement.
→ [PCTEST was planned to have a meeting with FCC regarding this issue. Please let me know the result of the meeting.](#)
5. FYI: regarding the 15B testing, ANSI C63.4 requires that all devices located at the back of the test stand be flush with the back edge of the table. In the future, please be sure that this is the case.

The item indicated above must be submitted before processing can continue on the above referenced application.

Sincerely,

Gregory Czumak
