

LETTER OF REQUEST

PERMISSIVE CHANGE

19 August 2020

We, as a manufacturer of following equipment, hereby submit Class 2/3 Permissive Change application for the FCC and the ISED to change components in the filings.

MODEL	FCC		ISED	
GEN11NAN	FCC ID	BEJTTAG11NE	Certification Number	2703H-TTAG11NE
	Original Grant Date	11 November 2017	Original Grant Date	11 November 2017
	Equipment Class	PCS Licensed Transmitter	HVIN/ PMN	TTA19ANEBN TTA19ANENN
			C2PC Grant Date	06 June 2018
			HVIN/ PMN	TTA20ANEBN TTA20ANENN TTA20BNEBN TTA20BNENN

A. Change Note against the FCC / ISED C2PC grants issued in 11/27/2017

The single modular [BEJGEN11NAN/2703H-GEN11NAN] in Host equipment get C2PC approval on 17 August 2020.

1. C2PC on 26 May 2020
 - a. Added Antenna Information in the grant
 - b. Power Reduction [GSM850, GSM1900]
 - c. Modified tune up by modified target & tolerance
 - d. Modified EIRP & ERP
 - e. Modified MPE by antenna information, modified target & tolerance, and power reduction
2. C2PC on 17 August 2020
 - a. FEM change [B4, B5 Duplexer]
 - b. RF Filter change
 - c. Removing or Changing some of components which are not related to RF part, are related to Digital part

B. Test Requirements

When the single modular was performed on C2PC test, the jig board was same as main PCB of BEJTTAG11NE.

The only difference of test configuration between BEJTTAG11NE and BEJGEN11NAN is BEJTTAG11NE has enclosure covering main PCB and plug-in type module (BEJGEN11NAN)

Therefore, we performed Radiated Spurious for GSM850 and LTE Band4 which were worst bands in GEN11NAN. The result is almost same as BEJGEN11NAN data.

The purpose of C2PC that concluded on 27 November 2017 had modification in single modular BEJGEN11NAN and those modification are applied on the new host equipment too.

Therefore, We confirmed that Host equipment BEJTTAG11NE contains a single modular BEJGEN11NAN without any modification.

Declaration

Based on the statement above, we hereby request permissive change for both FCC and ISED certification.
