RE: LG Electronics

FCC ID: BEJU8500

I have a few comments on this Application. Depending on your responses, kindly understand there may be additional comments.

- 1.) Please provide test setup photos – both SAR and Bluetooth EMC test – to the ATCB website.
- 2.) Are there any additional modulations besides GSM/GPRS which are used by this equipment for USA? If so, then this test data must be uploaded in addition to the GSM/GPRS information. Please provide as soon as possible.
- 3.) The band edge emission plots seem unusually low. If you view the plots on page 11 using the 3KHz RBW and compare them with the plots on page 9 using the 10KHz RBW, you will see over a 10dB difference between the trace elements and the +30dBm spectrum analyzer reference level. This makes me suspect that there might be some error in the test setup: either the equipment may not be set to the highest conducted power, or some error in accounting for attenuation has occurred. Please review your test setup and re-confirm your readings.

William H. Graff
President and Director of Engineering

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
