Report of Measurements for 39 – 50 MHz Transmitter

8LB.1 RF Power Output §2.1046

For each applicable frequency band of operation the RF power output into a 50 ohm dummy load was measured, as was the DC voltage and current input to the amplifying stage. The results are shown below.

RF Power Output						
Frequency Band	Test frequency	Channel Spacing (kHz)	Measured RF Power Output (W)	Measured DC Voltage (V)	Measured DC Current (A)	Note
39.0 - 50.0 MHz	44.5 MHz	25	100	13.6	22.0	

8LB.2 Modulation Characteristics §2.1047(a)

Not Applicable to Low Band modes (all digital)

8LB.3 Occupied Bandwidth §2.1049

Applicable modes: See chart under Results.

Results: The following plots demonstrate the UUT emissions are confined to the respective emission mask limits.
