TEST METHODOLOGY SEE DATA FOR 4.4, ESPECIALLY TEST
METHODOLOGY AS DESCRIBED IN 4.4.3

EH, TT

ce

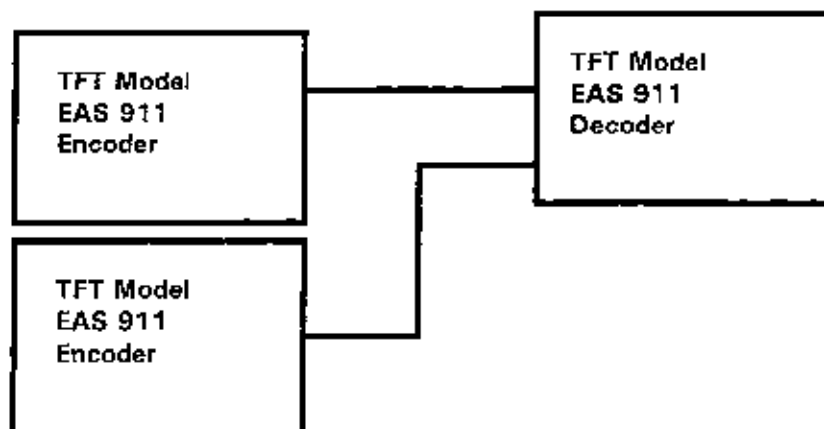

4.12.1 Test Objective

The objective of this test is to verify that EAN event override:

§11.33(a)(11)

A header code with the EAN Event code specified in §11.31(c) of this part that is received through either of the two audio inputs must override all other EAS messages.

4.12.2 Test Block Diagram

4.12.3 Test Methodology

The test message ZCZC-EAN-EAN-026000-026111+0015-0101700-WAAA/FM - is sent on channel 1 three seconds after a non-EAN message is sent on channel 2. It is confirmed that the channel 2 message is pre-empted and the EAN overrides and automatically engages forwarding. The channel 2 message is buffered and printed after the EAN has terminated with an EOM.

TESTED BY Shal DATE 10/31/95

5.1 Encoder Operating Temperature and Humidity Verification

5.1.1 Test Objective

The objective of this test is to verify that both the encoder and decoder meet operating temperature and humidity requirements:

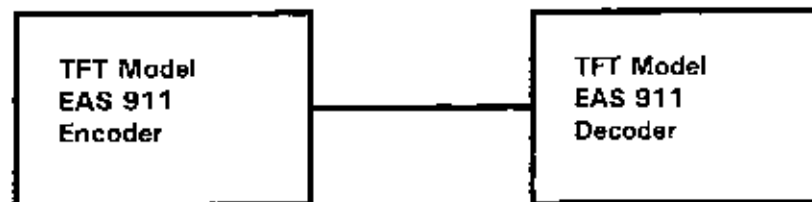

§11.32(b)

Operating Temperature and Humidity. Encoders shall have the ability to operate with the above specifications within an ambient temperature range of 0 to +50 degrees C and a range of relative humidity of up to 95%.

§11.33(b)

Decoders shall be capable of operation within the tolerances specified in this section as well as those in §§ 11.32(b), (c), and (d).

5.1.2 Test Block Diagram

5.1.3 Test Methodology

The test message ZCZC-EAN-EAN-026000-026111+0015-0101700-WAAA/TM - is sent through from the encoder to decoder through audio channel 1. Successful decode and encode is verified at 0 and 50 degrees C. Each test temperature is stabilized for 1 hour prior to running message transfer. Humidity is then increased to 95% at 50 degree C, and successful decode and encode is again verified.
