GENERAL REPORT SUMMARY

This electromagnetic emission test report is generated by Compatible Electronics Inc., which is an independent testing and consulting firm. The test report is based on testing performed by Compatible Electronics personnel according to the measurement procedures described in the test specifications given below and in the "Test Procedures" section of this report.

The measurement data and conclusions appearing herein relate only to the sample tested and this report may not be reproduced in any form unless done so in full with the written permission of Compatible Electronics.

This report must not be used to claim product endorsement by NVLAP or any other agency of the U.S. Government.

Device Tested: V-Link II
Model: DT-5100
S/N: N/A

Modifications: The EUT was not modified during the testing.

Manufacturer: Vitalcom, Inc.
15222 Del Amo Ave.
Tustin, California 92780

Test Date: March 30, 1999

Test Specifications: EMI requirements
FCC Title 47, Part 15 Subpart B and Subpart C Sections 15.205, 15.207, and 15.242

Test Procedure: ANSI C63.4: 1992

Test Deviations: The test procedure was not deviated from during the testing.

SUMMARY OF TEST RESULTS

TEST	DESCRIPTION	RESULTS
1	Conducted RF Emissions, 450 kHz - 30 MHz	Complies with the limits of section 15.207 of FCC Title 47, Part 15, Subpart C.
2	Radiated RF Emissions, 10 kHz - 2152 MHz	Complies with FCC Title 47, Part 15 Subpart C, sections 15.205, 15.209, and 15.242

1. PURPOSE

This document is a qualification test report based on the Electromagnetic Interference (EMI) test performed on the V-Link Model: DT-5001. The EMI measurements were performed according to the measurement procedure described in ANSI C63.4: 1992. The tests were performed in order to determine whether the electromagnetic emissions from the equipment under test, referred to as EUT hereafter, are within the limits of sections 15.205, 15.207, and 15.242 of FCC Title 47, Part 15, Subpart C; and the Class B limits of FCC Title 47, Part 15, Subpart B.

2. ADMINISTRATIVE DATA

2.1 Location of Testing

The EMI tests described herein were performed at the test facility of Compatible Electronics, 114 Olinda Drive, Brea, California 92823.

2.2 Traceability Statement

The calibration certificates of all test equipment used during the test are on file at the location of the test. The calibration is traceable to the National Institute of Standards and Technology (NIST).

2.3 Cognizant Personnel

Vitalcom, Inc.

Gus Testa Engineer

Compatible Electronics Inc.

Kyle Fujimoto Test Engineer

Scott McCutchan Lab Manager

2.4 Date Test Sample was Received

The test sample was received on March 30, 1999

2.5 Disposition of the Test Sample

The test sample was returned to Vitalcom, Inc. on April 2, 1999.

2.6 Abbreviations and Acronyms

The following abbreviations and acronyms may be used in this document.

RF	Radio Frequency
EMI	Electromagnetic Interference
EUT	Equipment Under Test
P/N	Part Number
S/N	Serial Number
HP	Hewlett Packard
ITE	Information Technology Equipment
CML	Corrected Meter Limit
LISN	Line Impedance Stabilization Network

3. APPLICABLE DOCUMENTS

The following documents are referenced or used in the preparation of this EMI Test Report.

SPEC	TITLE
FCC Title 47, Subpart C.	FCC Rules - Radio frequency devices (including digital devices) – Intentional Radiators.
ANSI C63.4 1992	Methods of measurement of radio-noise emissions from low-voltage electrical and electronic equipment in the range of 9 kHz to 40 GHz.

4. DESCRIPTION OF TEST CONFIGURATION

4.1 Description of Test Configuration - EMI

Setup and operation of the equipment under test.

The EUT was tested in two different modes:

Ethernet Mode: The antenna is mounted to the EUT by a right angle star & lock washer and nut. The right angle star & lock washer is then soldered on to the RF Module. The EUT was connected to the class two transformer and a loopback ethernet cable via its DC IN and ethernet ports, respectively. The EUT was looping back data from the EUT and then transmitting the data on a continuous basis.

RS-232 Mode: The antenna is mounted to the EUT by a right angle star & lock washer and nut. The right angle star & lock washer is then soldered on to the RF Module. The EUT was connected to the class two transformer and laptop via its DC IN and serial ports, respectively. The laptop is connected to the printer and AC Adapter via its parallel and DC IN ports, respectively. The EUT was receiving patient data from the laptop and then transmitting the data on a continuous basis.

The V-Link II Model: DT-5100 was tested in three orthogonal axis. The worst case Axis for the vertical polarization was when the EUT was placed in the Y-Axis. The worst case Axis for the horizontal polarization was when the EUT was placed in the Z-Axis. The spurious emissions coming from the clock oscillators were also found to be the highest when the EUT was operating in the RS-232 mode above. For the fundamental and harmonics, data was taken for both the Ethernet and RS-232 modes, with the low, medium, and high channels (175.08 MHz, 195.10 MHz, and 215.0 MHz, respectively) being tested. The final radiated data was taken in the worst case Axis as described above. The final conducted data was taken while the EUT was operating in the RS-232 mode (worst case) described above. All initial investigations were performed with the EMI receiver in manual mode scanning the frequency range continuously.

4.1.1 Cable Construction and Termination

RS-232 Mode

- Cable 1 This is a 6 foot unshielded cable connecting the EUT to the laptop. It has an RJ-11 connector at the EUT end and a D-9 pin connector at the laptop end. The cable was bundled to a length of 1 meter.
- Cable 2 This is a 6 foot unshielded cable connecting the laptop to the AC Adapter. It has a 1/8 inch power connector at the laptop end and is hard wired into the AC Adapter.
- Cable 3 This is a 6 foot braid and foil shielded cable connecting the printer to the laptop. It has a Centronics metallic type connector at the printer end and a D-25 pin metallic connector at the laptop end. The cable was bundled to a length of 1 meter. The shield of the cable was grounded to the chassis via the connectors.
- Cable 4 This is a 6 foot unshielded cable connecting the EUT to the class 2 transformer. It has a 1/8 inch power connector at the EUT end and is hard wired into the class 2 transformer.

Ethernet Mode

- Cable 1 This is a 6 foot unshielded loopback cable connected to the EUT. It has an RJ-45 connector at the EUT end. The cable was bundled so that it was 40 centimeters above the ground plane.
- Cable 2 This is a 6 foot unshielded cable connecting the EUT to the class 2 transformer. It has a 1/8 inch power connector at the EUT end and is hard wired into the class 2 transformer.

6. TEST SITE DESCRIPTION

6.1 Test Facility Description

Please refer to section 2.1 and 7.2 of this report for EMI test location.

6.2 EUT Mounting, Bonding and Grounding

The EUT was mounted on a 1.0 by 1.5 meter non-conductive table 0.8 meters above the ground plane.

The EUT was not grounded.

7. TEST PROCEDURES

The following sections describe the test methods and the specifications for the tests. Test results are also included in this section.

7.1 Conducted Emissions Test

The HP 8566B spectrum analyzer was used as a measuring meter along with the HP 85650A quasi-peak adapter. The data was collected with the spectrum analyzer in the peak detect mode with the "Max Hold" feature activated. The quasi-peak detector was used only where indicated in the data sheets. A 10 dB attenuation pad was used for the protection of the spectrum analyzer input stage, and the spectrum analyzer offset was adjusted accordingly to read the actual data measured. The LISN output was read by the HP 8566B spectrum analyzer. The output of the second LISN was terminated by a 50 ohm termination. The effective measurement bandwidth used for the conducted emissions test was 9 kHz.

Please see section 6.2 of this report for mounting, bonding and grounding of the EUT. The EUT was powered through the LISN, which was bonded to the ground plane. The LISN power was filtered and the filter was bonded to the ground plane. The EUT was set up with the minimum distances from any conductive surfaces as specified in ANSI C63.4: 1992. The excess power cord was wrapped in a figure eight pattern to form a bundle not exceeding 0.4 meters in length.

The initial test data was taken in manual mode while scanning the frequency ranges of 0.45 MHz to 1.6 MHz, 1.6 MHz to 5 MHz and 5 MHz to 30 MHz. The conducted emissions from the EUT were maximized for operating mode as well as cable placement. Once a predominant frequency (within 12 dB of the limit) was found, it was more closely examined with the spectrum analyzer span adjusted to 1 MHz.

The final data was collected under program control by the HP 9000/300 in several overlapping sweeps by running the spectrum analyzer at a minimum scan rate of 10 seconds per octave.

7.2 Radiated Emissions (Spurious and Harmonics) Test

The spectrum analyzer was used as a measuring meter along with the quasi-peak adapter. Amplifiers were used to increase the sensitivity of the instrument. The Com Power Preamplifier Model: PA-102 was used for frequencies from 30 MHz to 1 GHz, and the Com Power Microwave Amplifier Model: PA-122 was used for frequencies above 1 GHz. The spectrum analyzer was used in the peak detect mode with the "Max Hold" feature activated. In this mode, the spectrum analyzer records the highest measured reading over all the sweeps. The quasi-peak adapter was used only for those readings which are marked accordingly on the data sheets. The frequencies above 1 GHz were averaged manually by narrowing the video filter down to 1 Hz and slowing the sweep time to keep the amplitude reading calibrated. The measurement bandwidths and transducers used for the radiated emissions test were:

FREQUENCY RANGE	EFFECTIVE MEASUREMENT BANDWIDTH	TRANSDUCER
10 kHz to 150 kHz	200 Hz	Active Loop Antenna
150 kHz to 30 MHz	9 kHz	Active Loop Antenna
30 MHz to 300 MHz	120 kHz	Biconical Antenna
300 MHz to 1 GHz	120 kHz	Log Periodic Antenna
1 GHz to 2152 GHz	1 MHz	Horn Antenna

The open field test site of Compatible Electronics, Inc. was used for radiated emission testing. This test site is set up according to ANSI C63.4: 1992. Please see section 6.2 of this report for mounting, bonding and grounding of the EUT. The turntable supporting the EUT is remote controlled using a motor. The turntable permits EUT rotation of 360 degrees in order to maximize emissions. Also, the antenna mast allows height variation of the antenna from 1 meter to 4 meters. Data was collected in the worst case (highest emission) configuration of the EUT. At each reading, the EUT was rotated 360 degrees and the antenna height was varied from 1 to 4 meters (for E field radiated field strength). The gunsight method was used when measuring with the horn antenna in order to ensure accurate results.

Radiated Emissions (Spurious and Harmonics) Test (con't)

The presence of ambient signals was verified by turning the EUT off. In case an ambient signal was detected, the measurement bandwidth was reduced temporarily and verification was made that an additional adjacent peak did not exist. This ensures that the ambient signal does not hide any emissions from the EUT. The EUT was tested at a 3 meter test distance to obtain final test data.

8. CONCLUSIONS

The V-Link II Model: DT-5100 meets all of the specification limits defined in FCC Title 47, Part 15, Subpart B; and Subpart C, sections 15.205, 15.207, 15.209, and 15.242.

MODIFICATIONS TO THE EUT

MODIFICATIONS TO THE EUT

The modifications listed below were made to the EUT to pass FCC 15.242 specifications.

All the rework described below was implemented during the test in a method that could be reproduced in all the units by the manufacturer.

Modifications:

No modifications were made to the EUT.

Test location: Compatible Electronics

Customer : VITALCOM, INC.

Date : 3/30/1999

Manufacturer : VITALCOM, INC.

Time : 13.28

EUT name : V-LINK II

Model: DT-5100

Specification: Fcc_B Test distance: 3.0 mtrs

Lab: D

Distance correction factor($20 \cdot \log(\text{test}/\text{spec})$)

: 0.00

Test Mode :

SERIAL MODE

TEMPERATURE 61 DEGREES F.

RELATIVE HUMIDITY 85%

TESTED BY:

Kyle Fujimoto
