1 General Information

The following Class II Permissive Change Report is prepared on behalf of **M/A-COM, Inc.** in accordance with the Federal Communications Commission and Industry Canada Rules and Regulations. The Equipment Under Test (EUT) was the **Model MCS-0001, OpenSky Cell Site Base Station; FCC ID: BV8MCS800A025, IC: 3670195674A**. The test results reported in this document relate only to the item that was tested.

All measurements contained in this application were conducted in accordance with FCC Rules and Regulations CFR 47, and ANSI C63.4 Methods of Measurement of Radio Noise Emissions, 2003. The instrumentation utilized for the measurements conforms to the ANSI C63.4 standard for EMI and Field Strength Instrumentation. Calibration checks are performed regularly on the instruments, and all accessories including high pass filter, coaxial attenuator, preamplifier and cables.

1.1 Test Facility

The open area test site and conducted measurement facility used to collect the radiated data is located on the parking lot of Rhein Tech Laboratories, Inc. 360 Herndon Parkway, Suite 1400, Herndon, Virginia 20170. This site has been fully described in a report submitted to and approved by the Federal Communications Commission to perform AC line conducted and radiated emissions testing (ANSI C63.4 2003).

1.2 Related Submittal(s)/Grant(s)

This is a Class II permissive change report for FCC ID: BV8MCS800A025, originally certified by the FCC on April 28, 2000, and by Industry Canada on May 23, 2000. Class II permissive changes were approved on May 26, 2006 and August 1, 2006.

1.3 Description of Change in Device

Duplexer changed from a low noise amplifier type to a passive type. Low noise amplifier moved to the BCX board.

2 Tested System Details

The test sample was received 12/5/2006. Listed below are the identifiers and descriptions of all equipment, cables, and internal devices used with the EUT for this test, as applicable.

Figure 2-1: Configuration of Tested System

3 FCC Rules and Regulations Part 2 §2.1033(C)(8) Voltages and Currents Through The Final Amplifying Stage

Nominal DC Voltage: 27.0 VDC

Current: 4.0 AMPS

4 FCC Rules and Regulations Part 2 §2.1046(a): RF Power Output: Conducted; RSS-119 §5.4: Output Power Test

4.1 Test Procedure

ANSI TIA-603-2004, Section 2.2.1.

The EUT was connected to a coaxial attenuator having a 50 Ω load impedance.

4.2 Test Data

The following channels (in MHz) were tested: 851.0125, 854.0125, 861.5000 and 868.9875.

Table 4-1: RF Power Output (High Power): Carrier Output Power (Unmodulated)

Channel	Frequency (MHz)	RF Power Measured (Watt)*
1	851.0125	25.7
2	854.0125	25.9
3	861.5000	25.5
4	868.9875	24.8

* Measurement accuracy: +/- .02 dB (logarithmic mode)

TEST PERSONNEL:

Daniel Biggs		December 11, 2006
Test Technician/Engineer	Signature	Date Of Test

5 FCC Rules and Regulations Part 2 §2.1051: Spurious Emissions at Antenna Terminals; RSS-119 §5.8: Transmitter Unwanted Emissions

5.1 Test Procedure

ANSI TIA-603-2004, Section 2.2.13.

The transmitter was interfaced with a spectrum analyzer through an appropriate 50 ohm attenuator and a notch filter. The transmitter was operated at maximum power. Attenuator and cable losses were accounted for.

Device with digital modulation: Modulated to its maximum extent using a pseudo random data sequence – 19,200 bps.

The system loss was measured by using a signal generator and reference cable. The attenuation was first measured with a reference cable, then measured in combination with the attenuators and notch filter.

Loss (reference cable/attenuators/notch filter) – Loss (reference cable) = System Loss

5.2 Test Data

Frequency range of measurement per Part 2.1057: 9 kHz to 10 x Fc.

Limits: Mask D (dBm): $P(\text{dBm}) - (43 + 10 \times \log P(\text{W}))$

The following channels (in MHz) were investigated: 851.0125, 854.0125, 861.5000 and 868.9875. The worst case (unwanted emissions) channels are shown. The magnitude of emissions attenuated more than 20 dB below the FCC limit need not be recorded.

Table 5-1: Conducted Spurious Emissions – 851.0125 MHz – High Power

6 FCC Rules and Regulations Part 2 §2.1049: Occupied Bandwidth; Part 90 §90.210(g): Emissions Masks; RSS-119 §5.8: Transmitter Unwanted Emissions

6.1 Test Procedure

ANSI TIA-603-2004, Section 2.2.11.

The transmitter was interfaced with a spectrum analyzer through an appropriate 50 ohm attenuator and a notch filter. The transmitter was operated at maximum power. Attenuator losses were accounted for.

Device with digital modulation: Modulated to its maximum extent using a pseudo random data sequence – 19,200 bps.

The system loss was measured by using a signal generator and reference cable. The attenuation was first measured with a reference cable, and then measured in combination with the attenuators.

Loss (reference cable/attenuators) – Loss (reference cable) = System loss

Limit Mask G:

- (1) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 5 kHz, but not more than 10KHz: At least **$83 \log (f_d/5)$ dB**;
- (2) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 10 kHz, but not more than 250%, of the authorized bandwidth: At least **$116 \log (f_d/6.1)$ dB or $50 + 10 \log (P)$ dB, or 70 dB**, whichever is the lesser attenuation;
- (3) On any frequency removed from the center of the authorized bandwidth by more than 250% of the authorized bandwidth: At least **$43 + 10 \log (P)$ dB**.

Limit Mask H:

- (1) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of 4 kHz or less, **Zero dB**;
- (2) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 4 kHz, but not more than 8.5 kHz: At least **$107 \log (f_d/4)$ dB**;
- (3) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 8.5 kHz, but not more than 15 kHz: At least **$40.5 \log (f_d/1.16)$ dB**;
- (4) On any frequency removed from the center of the authorized bandwidth by a displacement frequency (f_d in kHz) of more than 15 kHz, but not more than 25 kHz: At least **$116 \log (f_d/6.1)$ dB**;
- (5) On any frequency removed from the center of the authorized bandwidth by more than 25 kHz: At least **$43 + 10 \log (P)$ dB**.

Test Technician/Engineer	Signature	Date Of Test

7 FCC Rules and Regulations Part 2 §2.1053(a): Field Strength of Spurious Radiation; RSS-119 §5.8: Unwanted Emissions

7.1 Test Procedure

ANSI TIA-603-C-2004, Section 2.2.12

Digital Modulation: Modulated to its maximum extent using a pseudo random data sequence – 9600 bps.

The spurious emissions levels were measured and the device under test was replaced by a substitution antenna connected to a signal generator. This signal generator level was then corrected by subtracting the cable loss from the substitution antenna to the signal generator, and the gain of the antenna was further corrected to a half wave dipole.

$$P_d(\text{dBm}) = P_g(\text{dBm}) - \text{cable loss (dB)} + \text{antenna gain (dB)}$$

where:

P_d is the dipole equivalent power

P_g is the generator output power into the substitution antenna

7.2 Test Data

The worst case emissions test data are shown. The magnitude of emissions attenuated more than 20 dB below the FCC limit need not be recorded.

Table 7-1: Field Strength of Spurious Radiation – 854.0 MHz; Wide Band; High Power

Limit = $43 + 10 \log P = 57.1 \text{ dBc}$

Conducted Power = $44.1 \text{ dBm} = 25.9 \text{ W}$

Frequency (MHz)	Spectrum Analyzer Level (dBuV)	Signal Generator Level (dBm)	Cable Loss* (dB)	Antenna Gain (dBd)	Corrected Signal Generator Level (dBc)	Margin (dB)
1708.03	43.5	-57.8	4.6	4.9	101.6	-44.5
2562.04	34.6	-65.2	4.6	6.9	107.0	-49.9
3416.05	33.4	-64.7	5.6	7.3	107.1	-50.0

8 Conclusion

The data in this measurement report shows that the **M/A-COM, Inc. Model MCS-0001, OpenSky Cell Site Base Station; FCC ID: BV8MCS800A025, IC: 3670195674A**, complies with applicable requirements of Parts 90, 15 and 2 of the FCC Rules, and Industry Canada RSS-119.
