Date of Test: January 30-31, 2003

1.0 INTRODUCTION

This is an Addendum report to the report #30236223.

The M/A-COM, Inc., device, model # P800, FCC ID: BV8P800 was originally tested for SAR on June 15-22, 2002 in accordance with the requirements for compliance testing defined in FCC OET Bulletin 65, Supplement C (Edition 01-01). Testing was performed at the Intertek Testing Services facility in Menlo Park, California. For the evaluation, the dosimetric assessment system DASY3 was used. The phantom employed was the "Generic Twin Phantom" from SPEAG.

As per FCC request (correspondence ref. Number 24608), additional tests were performed on January 31, 2003. The phantom employed was the "SAM Twin Phantom" from SPEAG. The device with the same output power and the same Duty Factor (50%) was tested at 2.5cm from the phantom. The scans of entire device on 3 frequencies were performed.

As the size of the device (33.5 cm including antenna) is more than the length of the flat section of the phantom (31 cm), the test was performed in two steps (in two positions) as described in the section 2.0. The test results clearly indicate the worst case SAR is within the boundaries of the measuring grid.

The maximum spatial peak SAR value for the device averaged over 1g for was found to be:

Position	Frequency (MHz)	SAR _{1g} (mW/g)
2.5 cm from flat phantom	806	1.14

M/A-COM, Inc., Model No: P800
FCC ID: BV8P800

Date of Test: January 30-31, 2003

2.0 TEST POSITION

Test Position 1

Test Position 2

For details, see the setup photographs in section 3.2.

M/A-COM, Inc., Model No: P800
FCC ID: BV8P800

Date of Test: January 30-31, 2003

3.0 SAR EVALUATION

3.1 SAR Limits

The following FCC limits for SAR apply to devices operate in General Population/Uncontrolled Exposure environment:

EXPOSURE (General Population/Uncontrolled Exposure environment)	SAR (W/kg)
Average over the whole body	0.08
Spatial Peak (1g)	1.60
Spatial Peak for hands, wrists, feet and ankles (10g)	4.00

M/A-COM, Inc., Model No: P800
FCC ID: BV8P800

Date of Test: January 30-31, 2003

3.2 Configuration Photographs

SAR Measurement Test Setup

Test Position 1 25mm from Phantom

M/A-COM, Inc., Model No: P800
FCC ID: BV8P800

Date of Test: January 30-31, 2003

SAR Measurement Test Setup

Test Position 2 25mm from Phantom

M/A-COM, Inc., Model No: P800
FCC ID: BV8P800

Date of Test: January 30-31, 2003

3.3 System Verification

Prior to the assessment, the system was verified to the $\pm 10\%$ of the specifications by using the system validation kit. The validation was performed at 900 MHz.

Validation kit	Targeted SAR _{1g} (mW/g)	Measured SAR _{1g} (mW/g)	Plot #
D900V2, S/N #: 013	2.66	2.89	8

3.4 Evaluation Procedures

The SAR evaluation was performed with the following procedures:

- a. SAR was measured at a fixed location above the reference point and used as a reference value for the assessing the power drop.
- b. The SAR distribution at the exposed side of the flat Phantom was measured at a distance of 30 mm from the inner surface of the shell. The area covered the entire dimension of the head and the horizontal grid spacing was 20 mm x 20 mm. Based on this data, the area of the maximum absorption was determined by spline interpolation.
- c. Around this point, a volume of 32 mm x 32 mm x 34 mm was assessed by measuring 5 x 5 x 7 points. On the basis of this data set, the spatial peak SAR value was evaluated with the following procedure:
 - i) The data at the surface were extrapolated, since the center of the dipoles is 2.7 mm away from the tip of the probe and the distance between the surface and the lowest measurement point is 1.6 mm. The extrapolation was based on a least square algorithm. A polynomial of the fourth order was calculated through the points in Z-axes. This polynomial was then used to evaluate the points between the surface and the probe tip.
 - ii) The maximum interpolated value was searched with a straightforward algorithm. Around this maximum, the SAR values averaged over the spatial volumes (1g or 10g) were computed using the 3-D spline interpolation algorithm. The 3-D spline is composed of three one-dimensional splines with the "Not a knot" condition (in x, y and z directions). The volume was integrated with the trapezoidal algorithm. 1000 points (10 x 10 x 10) were interpolated to calculate the average.
 - iii) All neighboring volumes were evaluated until no neighboring volume with a higher average value was found.
- d. Re-measurements of the SAR value at the same location as in step a. above. If the value changed by more than 5 %, the evaluation was repeated.

M/A-COM, Inc., Model No: P800
FCC ID: BV8P800

Date of Test: January 30-31, 2003

3.5 Test Results

The results on the following page(s) were obtained when the device was tested in the condition described in this report. Detail measurement data and plots, which reveal information about the location of the maximum SAR with respect to the device, are reported in Appendix A.

M/A-COM, Inc., Model No: P800
 FCC ID: BV8P800

Date of Test: January 30-31, 2003

Measurement Results

Trade Name:	M/A-COM	Model No.:	P800
Serial No.:	Not Labeled	Test Engineer:	Suresh Kondapalli

Brain 900 MHz Band					
Ambient Temperature		23.5 °C	Relative Humidity		55 %
Liquid Temperature		22°C ± 0.5 °C	Liquid depth		14.8 cm
Test Signal Source		Test Mode	Signal Modulation		50% duty cycle *
			Output Power Changes		Within ±0.2dB
Test Duration		45 Min. each scan	Number of Battery Change		New battery for every scan
Plot No	Frequency MHz	Operating Mode	Crest Factor	Position	Measured SAR _{1g} (mW/g)
1	806	See Note	2	2.5 cm From Phantom, Position 1	0.773
2	806	See Note	2	2.5 cm From Phantom, Position 2	1.14
3	816	See Note	2	2.5 cm From Phantom, Position 1	0.929
4	816	See Note	2	2.5 cm From Phantom, Position 2	1.08
5	824	See Note	2	2.5 cm From Phantom, Position 1	0.949
6	824	See Note	2	2.5 cm From Phantom, Position 2	1.03

* EUT was programmed to transmit 50% of the time, which simulates actual usage conditions. The duty cycle is shown on the plots #8 and #9.

Dipole, System Verification					
Frequency MHz	Operating Mode	Crest Factor	Measured SAR _{1g} (mW/g)	Measured SAR _{10g} (mW/g)	Plot Number
900	CW	1	2.89	1.85	7

Note: a) Worst case data were reported
 b) Duty cycle factor included in the measured SAR data
 c) Uncertainty of the system is not included

4.0 TEST EQUIPMENT

4.1 Equipment List

The Specific Absorption Rate (SAR) tests were performed with the SPEAG model DASY 3 automated near-field scanning system, which is a package, optimized for dosimetric evaluation of mobile radios [3].

The following major equipment/components were used for the SAR evaluations:

SAR Measurement System			
EQUIPMENT	SPECIFICATIONS	S/N #	Last cal. date
Robot	Stäubi RX60L	597412-01	N/A
	Repeatability: ± 0.025 mm Accuracy: 0.806×10^{-3} degree Number of Axes: 6		
E-Field Probe	ET3DV6	1576	02/27/02
	Dynamic Range: 5 μ W/g to >100 mW/g Tip diameter: 6.8 mm Probe Linearity: ± 0.2 dB (30 MHz to 3 GHz) Axial isotropy: ± 0.2 dB Spherical isotropy: ± 0.4 dB Length: 34.5 cm Distance between the probe tip and the dipole center: 2.7 mm Calibration: 835/900 MHz and 1800/1900 MHz for head & body simulating liquid		
Data Acquisition	DAE3	317	N/A
	Measurement Range: 1 μ V to >200mV Input offset Voltage: < 1 μ V (with auto zero) Input Resistance: 200 M		
Phantom	SAM Twin V4.0	TP-1243	QD000P40CA
	Type: SAM Twin, Homogenous Shell Material: Fiberglass Thickness: 2 ± 0.2 mm Capacity: 20 liter		
Device holder	Non-conductive holder supplied with DASY3, dielectric constant less than 5.0	N/A	N/A
Simulated Tissue	Mixture	N/A	01/30/03
	Please see section 6.2 for details		
Power Meter	HP 8900D w/ 84811A sensor	3607U00673	08/27/02
	Frequency Range: 100kHz to 18 GHz Power Range: 300 μ W to 3W		

M/A-COM, Inc., Model No: P800
FCC ID: BV8P800

Date of Test: January 30-31, 2003

4.2 Tissue Simulating Liquid

Solution	Ingredients for Brain simulation Frequency (835 MHz)
Water	41.05 %
Sugar	56.5 %
Salt	1.35%
Bactericide	0.1%
HEC	1.0 %

The dielectric parameters were verified prior to assessment using the HP 85070A dielectric probe kit and the HP 8753C network Analyzer. The dielectric parameters were:

Frequency (MHz)	Simulation	ϵ_r^*	$\sigma^*(\text{mho/m})$	$\rho^{**}(\text{kg/m}^3)$
816	Brain	42.7	0.90	1000

* Worst case uncertainty of the HP 85070A dielectric probe kit

** Worst case assumption

M/A-COM, Inc., Model No: P800
FCC ID: BV8P800

Date of Test: January 30-31, 2003

4.3 E-Field Probe Calibration

Probes were calibrated by the manufacturer in the TEM cell ifi 110. To ensure consistency, a strict protocol was followed. The conversion factor (ConF) between this calibration and the measurement in the tissue simulation solution was performed by comparison with temperature measurement and computer simulations. Probe calibration factors are included in Appendix C.

M/A-COM, Inc., Model No: P800
FCC ID: BV8P800

Date of Test: January 30-31, 2003

4.4 Measurement Uncertainty

The Table below includes the uncertainty budget suggested by the IEEE Std 1528-200X and determined by SPEAG for the DASY3 measurement System.

The extended uncertainty (K=2) was assessed to be 27.8 %

M/A-COM, Inc., Model No: P800

FCC ID: BV8P800

Date of Test: January 30-31, 2003

Notes.

1. The Divisor is a function of the probability distribution and degrees of freedom (v_i and v_{eff}). See NIST Technical Note TN1297, NIS 81 and NIS 3003.
2. c_i is the sensitivity coefficient that should be applied to convert the variability of the uncertainty component into a variability of SAR.

4.5 Measurement Tractability

All measurements described in this report are traceable to National Institute of Standards and Technology (NIST) standards or appropriate national standards.

APPENDIX A - SAR Evaluation Data

Please note that the graphical visualization of the phone position onto the SAR distribution gives only limited information on the current distribution of the device, since the curvature of the head results in graphical distortion. Full information can only be obtained either by H-field scans in free space or SAR evaluation with a flat phantom.

Power drift is the measurement of power drift of the device over one complete SAR scan.
