2.6.2 Test Conditions

The Frequency Stability “Temperature” tests were performed with the OpenSky P801T Portable Radio placed inside a Temperature/Humidity Chamber.

The Frequency Stability “Voltage” tests were performed with the OpenSky P801T Portable Radio placed on top of a wooden turntable. The ambient temperature was 20°C

The OpenSky P801T Portable Radio was configured to operate at the middle channel OCF mode.

2.6.3 Test Method**Frequency Stability-Temperature**

The OpenSky P801T Portable Radio was placed inside a temperature/humidity chamber. The ambient temperature inside the chamber is computer controlled and varied from –30°C to +50° in 10° steps for this test. The temperature was initially set to 20°C and a reference measurement was taken. The ambient temperature was then dropped to –30°C and stepped up to +50°C in 10°C intervals. A measurement was taken every 10°C. The output of the OpenSky P801T Portable Radio was connected to a frequency counter via two 20dB attenuators and a N-Type coax cable. The P801T Radio was set to 816.3625 MHz (Channel 415) OCF Mode. See Figure 6 for test set-up. The temperature was measured by placing a thermal couple on the outside chassis of the P801T Radio. The P801T Portable Radio was turned off between each 10° step.

Frequency Stability-Voltage

The OpenSky P801T Portable Radio was placed on top of a wooden table connected to a modified battery pack enclosure. The battery pack enclosure with exposed terminals (no cells) was connected to a DC supply. Testing was performed at 8VDC (above nominal), 7.3VDC (nominal), and 6.093VDC (battery end-point). The voltage variation test was performed at the high, middle, and low channels in the OCF Mode.

The modes of operation and frequencies tested are as follows:

OCF Mode	
Ch# 1	806.0125MHz
Ch# 415	816.3625MHz
Ch# 830	823.9875MHz

2.6.4 Results

The M/A-Com OpenSky P801T Portable Radio meets the Frequency Stability requirements of FCC Part 90.213 and Part 2.995.

2.7.2 Test Conditions

The OpenSky P801T Portable Radio was set up on a wooden table 3 meters from the receiving antenna within Open Area Test Site A.

The OpenSky P801T Portable Radio was configured to operate in the OCF mode of operation to maximize the emissions. The EUT was set up and powered by a fully charged battery for radiated emission tests. The worst case signals detected were recorded.

The OpenSky P801T Portable Radio was tested in two different configurations.

1. Standalone with $\frac{1}{2}$ wave antenna.
2. Standalone with $\frac{1}{4}$ wave antenna.

2.7.3 Test Method

The test method of ANSI-C63.4 was followed for Class B equipment. For the radiated emission measurements, a manual scan was performed from 30MHz to 10GHz. During this scan, the antenna, turntable and EUT's cable positions were manipulated to maximize the emission levels in a given frequency band displayed on the spectrum analyzer.

2.7.4 Results

The M/A-Com OpenSky P801T Portable Radio meets the requirements for Radiated Emissions as required by FCC Part 15 Subpart B for Class B equipment.
