1 GENERAL INFORMATION

The following certification report is prepared on behalf of **M/A-COM, Inc.** in accordance with the Federal Communications Commission Rules and Regulations. The Equipment Under Test (EUT) was the **OpenSky M-803 V-TAC (Vehicular Tactical Network) 800 MHz Mobile Radio; FCC ID: BV8VTAC800, IC: 3670A-VTAC**. The test results reported in this document relate only to the item that was tested.

All measurements contained in this application were conducted in accordance with FCC Rules and Regulations CFR 47, Part 90, and ANSI/TIA/EIA 603-2002, Land Mobile FM or PM Communications Equipment Measurement and Performance Standards. Calibration checks are performed regularly on the instruments, and all accessories including high pass filter, coaxial attenuator, preamplifier and cables.

Please note that portions of the EUT are subject to Part 15 DoC testing. A DoC report is on file for this product.

1.1 TEST FACILITY

The open area test site and conducted measurement facility used to collect the radiated data is located on the parking lot of Rhein Tech Laboratories, Inc. 360 Herndon Parkway, Suite 1400, Herndon, Virginia 20170. This site has been fully described in a report dated March 3, 1994, submitted to and approved by the Federal Communications Commission to perform AC line conducted and radiated emissions testing.

1.2 RELATED SUBMITTAL(S)/GRANT(S)

This is a new certification application.

1.3 DESCRIPTION OF CHANGE IN DEVICE

No changes were made to the EUT to achieve compliance.

1.4 PRODUCT DESCRIPTION

The M-803 Vehicular Tactical (V-TAC) unit is a voice and data radio designed for a mobile environment. It operates in the 800 MHz SMR and NPSPAC frequency bands. The rated RF output power is continuously variable between 0.25 – 24 W. The MAMROS0016 configuration, consisting of a trunk mount transceiver (VRM), vehicular repeater base (VRB), RF combiner, control head, and 10 dB power attenuator, was tested. OpenSky digital and conventional modulation software was provided for testing.

TABLE 1-1: PRODUCT DESCRIPTION

Trade Name	OpenSky V-TAC (Vehicular Tactical Network) 800 MHz Mobile Radio
Use of Product	Voice and data communication
FCC Identifier	BV8VTAC800
Type Modulation	GFSK, FM
Bit Rate	9600, 19200 bps
Baud Rate	9600
RF Output	Continuously variable between 0.25 - 24W
Frequency Range	806-824 MHz and 851-869 MHz
Max. Number of Channels	830 normal, 830 talkaround
Antenna Gain	3 dBd
External Input	Audio and digital

The M-803 Vehicular Tactical Unit (V-TAC) consists of a Full Duplex Trunk Mount M-803 Mobile Radio Unit (MRU) with GPS, an M-803 Vehicular Repeater Base Unit (VRB), and an 800 MHz RF Combiner; see Figure 1.

FIGURE 1-1: M-803 VEHICULAR TACTICAL UNIT (VTAC) MAJOR COMPONENTS

1.4.1 M-803 VTAC FREQUENCY RANGE

The M-803 VTAC can operate as a MRU, as a local base station in Scene of Incident (SOI) coverage, and as a Vehicular Repeater for Coverage Extension (CE). When the VTAC operates as a MRU, the frequency range is described in Table 1-2. When the VTAC operates in SOI or CE, the frequency range is described in Table 1-3.

TABLE 1-2: VTAC FREQUENCY RANGE (MRU)

Emission Protocol	OTP	OCF	TA (OCF & P25)	P25
Receive Range	851.0125 MHz to 868.9875 MHz	851.0125 MHz to 868.9875 MHz	851.0125 MHz to 868.9875 MHz	851.0125 MHz to 868.9875 MHz
Transmit Range	806.0125 MHz to 823.9875 MHz	806.0125 MHz to 823.9875 MHz	851.0125 MHz to 868.9875 MHz	806.0125 MHz to 823.9875 MHz
Receive to Transmit Offset Frequency	45 MHz	45 MHz	0 Hz	45 Hz
Number of Channels	830	830	830	830
Channel Spacing	25 kHz	25 kHz	25 kHz	25 kHz

TABLE 1-3: VTAC FREQUENCY RANGE (SOI OR CE)

Emission Protocol	OTP Scene of Incident	OTP/ORP Coverage Extension
Receive Range	806.0125 MHz to 823.9875 MHz	806.0125 MHz to 823.9875 MHz and 851.0125 MHz to 868.9875 MHz
Transmit Range	851.0125 MHz to 868.9875 MHz	806.0125 MHz to 823.9875 MHz and 851.0125 MHz to 868.9875 MHz
Receive to Transmit Offset Frequency	45 MHz	45 MHz
Number of Channels	830	830
Channel Spacing	25 kHz	25 kHz

1.4.2 M-803 VEHICULAR TACTICAL UNIT TYPES OF EMISSIONS

The M-803 VTAC can operate as a MRU, as a local base station in Scene of Incident (SOI) coverage, and as a Vehicular Repeater for Coverage Extension (CE). When the VTAC operates as a MRU, the emission types are OTP, OCF, TA and P25. When the VTAC operates in SOI or CE, the emission types are OTP and ORP. All emissions are listed in Table 1-4.

- **OpenSky® Trunked Protocol (OTP):** OTP supports burst transfers of voice and data over a single channel. The information is transmitted through a 4 level Gaussian frequency shift keyed (GFSK) signal. The signal symbol rate is 9600 baud that corresponds to a 19.2 Kbps data rate. The symbols are Gaussian filtered with a BBT = 0.7 and then frequency modulated with a modulation index of 1/3.
- **OpenSky® Conventional FM (OCF):** OCF is based on TIA/EIA-603, which provides standard FM radio capabilities over separate transmit and receive frequencies. The audio transmit path consists of a microphone level input which is audio leveled, high pass filtered, low pass filtered, and pre-emphasis. A CTCSS tone is added and the peak deviation limited. The resulting signal is then FM modulated.
- **Talk Around (TA):** TA is based on TIA/EIA-603, which provides standard FM radio capabilities over the same transmit and receive frequency. The audio transmit path consists of a microphone level input which is audio leveled, high pass filtered, low pass filtered, and pre-emphasis. A CTCSS tone is added and the peak deviation limited. The resulting signal is then FM modulated.
- **P25® Common Air Interface (CAI):** P25 supports continuous transfers of voice and data over a single frequency division multiplex channel (FDM). The information is transmitted through a 4 level Frequency shift keyed (FSK) signal where the symbol deviations are at 0.6KHz, 1.8KHz-0.6KHz-1.8KHz. The signal symbol rate is 4800 baud that corresponds to a 9.6 Kbps data rate. The symbols are Raised Cosine filtered with an excess bandwidth (alpha) of 0.2 to the frequency response specified in TSB1002.BAA. The filtered signal is then further shaped with an Inverse Sinc filter also to the frequency response described in TSB1002.BAA.
- **OpenSky® Trunked Protocol (OTP):** When the VTAC is operating in SOI, the emission type will be the forward path of OTP. Forward path OTP supports continuous transmission for the transfers of voice and data over a single channel. The information is transmitted through a 4 level Gaussian frequency shift keyed (GFSK) signal. The signal symbol rate is 9600 baud that corresponds to a 19.2 Kbps data rate. The symbols are Gaussian filtered with a BBT = 0.7 and then frequency modulated with a modulation index of 1/3.
- **OpenSky® Repeater Protocol (ORP):** When the VTAC is operating in CE, the emission type will be ORP that is a modified forward path OTP. ORP supports burst transmission of voice and data over a single channel. The information is transmitted through a 4 level Gaussian frequency shift keyed (GFSK) signal. The signal symbol rate is 9600 baud that corresponds to a 19.2 Kbps data rate. The symbols are Gaussian filtered with a BBT = 0.7 and then frequency modulated with a modulation index of 1/3.

TABLE 1-4: M-803 VTAC TYPES OF EMISSIONS

Emission Protocol	Type of Modulation	Nature of Signal	Type of Information
OTP	Frequency Modulation	A single channel burst transmission containing digital information without the use of a modulating sub-carrier.	• Data transmission, telemetry, telecommand • Telephony
OCF	Frequency Modulation	A single channel burst transmission containing analogue information	• Telephony
TA	Frequency Modulation	A single channel burst transmission containing analogue information	• Telephony
P25	Frequency Modulation	A single channel burst transmission containing digital information without the use of a modulating sub-carrier.	• Data transmission, telemetry, telecommand • Telephony
OTP (SOI)	Frequency Modulation	A single channel of continuous transmission containing digital information without the use of a modulating sub-carrier.	• Data transmission, telemetry, telecommand • Telephony
ORP (CE)	Frequency Modulation	Two channels of burst transmission containing digital information without the use of a modulating sub-carrier.	• Data transmission, telemetry, telecommand • Telephony

We, the undersigned, hereby declare that the equipment tested and referenced in this report conforms to the identified standard(s) as described in this attached test record. No modifications were made to the equipment during testing in order to achieve compliance with these standards.

Furthermore, there was no deviation from, additions to, or exclusions from, the above standards for certification methodology.

3 TESTED SYSTEM DETAILS

The EUT test sample was received on February 8, 2005. Listed below are the identifiers and descriptions of all equipment, cables, and internal devices used with the EUT for this test, as applicable.

The system consists of an 800 MHz transceiver (VRM), a repeater (VRB), an RF combiner, and is controlled by a control head/microphone. The system was tested in a duplex operating mode.

The EUT consists of two transceivers that can transmit simultaneously, which connect to a single antenna through a combiner. Since both transceivers can transmit simultaneously, simultaneous transmission was determined to be the worst case mode of operation for power measurements and spurious measurements. During these tests, the power from one of the transceivers was investigated with the other transceiver set to the channel which generated the highest power.

Nominal DC Voltage: 13.8 VDC

Current: 4 Amps RX Mode; 12 Amps TX Mode

5 FCC RULES AND REGULATIONS PART 2 §2.1046 (A): RF POWER OUTPUT: CONDUCTED; RSS-119 §6.2: OUTPUT POWER TEST

5.1 TEST PROCEDURE

ANSI/TIA/EIA-603-2002, Section 2.2.1.

The EUT was connected to a coaxial attenuator having a 50Ω load impedance. The EUT was tested with both the VRM and VRB units transmitting simultaneously on separate frequencies. The power measurements reported in Tables 5-1 and 5-2 are a combined power reading from the antenna RF port of the combiner.

5.2 TEST DATA

6 FCC RULES AND REGULATIONS PART 2 §2.1051: SPURIOUS EMISSIONS AT ANTENNA TERMINALS; RSS-119 §6.3: UNWANTED EMISSIONS

6.1 TEST PROCEDURE

ANSI/TIA/EIA-603-2002, Section 2.2.13.

The transmitter is terminated with a 50 Ω load and interfaced with a spectrum analyzer.

Device with digital modulation: Modulated to its maximum extent using a pseudo random data sequence – 19,200 bps. The system was tested with both the VRM and VRB transmitting on separate frequencies. The plots represent the VRB set to a power of 39 dBm (high power) or 34 dBm (low power). The VRM was set to 41 dBm for all tests.

6.2 TEST DATA

Frequency range of measurement per Part 2.1057: 9 kHz to 10 x Fc.

Limits: $P(\text{dBm}) - (43 + 10 \times \text{LOG } P(\text{W}))$

The worst case (unwanted emissions) channels are shown. The magnitude of emissions attenuated more than 20 dB below the FCC limit need not be recorded.

7 FCC RULES AND REGULATIONS PART 2 §2.1053 (A): FIELD STRENGTH OF SPURIOUS RADIATION; RSS-119 §6.3: UNWANTED EMISSIONS

7.1 TEST PROCEDURE

ANSI/TIA/EIA-603-2002, Section 2.2.12.

Device with digital modulation: Modulated to its maximum extent using a pseudo random data sequence – 19,200 bps.

The spurious emissions levels were measured and the device under test was replaced by a substitution antenna connected to a signal generator. This signal generator level was then corrected by subtracting the cable loss from the substitution antenna to the signal generator, and the gain of the antenna was further corrected to a half-wave dipole.

7.2 TEST DATA

7.2.1 CFR 47 PART 90.210 REQUIREMENTS

The worst-case emissions test data are shown. The magnitude of emissions attenuated more than 20 dB below the FCC limit need not be recorded.

The VRM power was set to 15W and the VRB was set to 8W. Both transmitters were transmitting simultaneously.

9 FCC RULES AND REGULATION PART 2 §2.1055: FREQUENCY STABILITY; PART 90 §90.213: FREQUENCY STABILITY; RSS-119 §7: FREQUENCY STABILITY

9.1 TEST PROCEDURE

ANSI/TIA/EIA-603-2002, section 2.2.2.

The carrier frequency stability is the ability of the transmitter to maintain an assigned carrier frequency.

The EUT was evaluated over the temperature range -30°C to +60°C.

The temperature was initially set to -30°C and a 2-hour period was observed for stabilization of the EUT. The frequency stability was measured within one minute after application of primary power to the transmitter. The temperature was raised at intervals of 10 degrees centigrade through the range. A ½ hour period was observed to stabilize the EUT at each measurement step and the frequency stability was measured within one minute after application of primary power to the transmitter. Additionally, the power supply voltage of the EUT was varied +/-15% nominal input voltage.

The worst-case test data are shown below in Table 9-1 and Table 9-3.

9.2 TEST DATA

9.2.1 FREQUENCY STABILITY/TEMPERATURE VARIATION

Limit is 1.5 ppm for a mobile device from 821-824 MHz. Worst-case deviation was found to be -.89 ppm at -10°C.

10 FCC PART 2 §2.1047 (A): MODULATION CHARACTERISTICS - AUDIO FREQUENCY RESPONSE

10.1 TEST PROCEDURE

ANSI/TIA/EIA-603-2002, section 2.2.6

The audio frequency response is the degree of closeness to which the frequency deviation of the transmitter follows a prescribed characteristic.

The input audio level at 1000 Hz was set to produce 20% of the rated system deviation. This point is shown as the 0 dB reference level, noted DEVref. The audio signal generator was varied from 100 Hz to 5 kHz with the input level held constant. The deviation in kHz was recorded using a modulation analyzer as DEVfreq. The response in dB relative to 1 kHz was calculated as follows:

$$\text{Audio Frequency Response} = 20 \text{ LOG (DEVfreq/DEVref)}$$

10.2 TEST DATA

12 FCC RULES AND REGULATIONS PART 2 §2.1047 (B): MODULATION CHARACTERISTICS - MODULATION LIMITING; RSS-119 §6.6: FM MODULATION LIMITING AND AUDIO LOW-PASS FILTER

12.1 TEST PROCEDURE

ANSI/TIA/EIA-603-2002, section 2.2.3

The transmitter was adjusted for full rated system deviation. The audio input level was adjusted for 60% of rated system deviation at 1000 Hz. Using this level as a reference (0dB) the audio input level was varied from the reference +/-20 dB for modulation frequencies of 300 Hz, 1,000 Hz, and 2,500 Hz. The system deviation obtained as a function of the input level was recorded. Both positive and negative peak deviations were recorded.

13 FCC RULES AND REGULATIONS PART 2 §2.202: NECESSARY BANDWIDTH AND EMISSION BANDWIDTH; PART 90 §2.210: TYPES OF EMISSIONS

Type of Emission: F3E, F7D, F7E

Voice – SMR - 25 kHz channel separation

Calculation:

Max modulation (M) in kHz: 3.0

Max deviation (D) in kHz: 5.0

Constant factor (K): 1 (assumed)

$B_n = 2 \times M + 2 \times D \times K = 16.0 \text{ kHz}$

Emission designator: 16K0F3E

Voice – NPSPAC - 25 kHz channel separation

Calculation:

Max modulation (M) in kHz: 3.0

Max deviation (D) in kHz: 4.0

Constant factor (K): 1 (assumed)

$B_n = 2 \times M + 2 \times D \times K = 14.0 \text{ kHz}$

Emission designator: 14K0F3E

OTP/ORP – SMR - 19200 bps

Calculation:

Data rate in bps (R) = 19200

Peak deviation of carrier (D) = 4000 Hz

$B_n = [R / \log_2(4) + 2(D)(1)] = 17.6 \text{ kHz}$

Emission designator: 17K6F7D, 17K6F7E

OTP/ORP – NPSPAC - 19200 bps

Calculation:

Data rate in bps (R) = 19200

Peak deviation of carrier (D) = 4000 Hz

$B_n = [R / \log_2(4) + 2(D)(1)] = 17.6 \text{ kHz}$

Emission designator: 17K6F7D, 17K6F7E

P25 – SMR - 9600 bps

Calculation:

Data rate in bps (R) = 9600

Peak deviation of carrier (D) = 1800 Hz

$B_n = [R / \log_2(4) + 2(D)(1)] = 8.4 \text{ kHz}$

Emission designator: 8K4F1D, 8K4F1E

P25 – NPSPAC - 9600 bps

Calculation:

Data rate in bps (R) = 9600

Peak deviation of carrier (D) = 1800 Hz

$B_n = [R / \log_2(4) + 2(D)(1)] = 8.4 \text{ kHz}$

Emission designator: 8K4F1D, 8K4F1E

14 CONCLUSION

The data in this measurement report shows that the **M/A-COM, Inc. Model OpenSky M-803 V-TAC Mobile Radio; FCC ID: BV8VTAC800, IC: 3670A-VTAC**, complies with the applicable requirements of Parts 90 and 2 of the FCC Rules, and Industry Canada RSS-119.
