

Similarities between BS6000 and BS200

The **BS6000** is one of two models certified within the COM6000 Family Certification **1860A-COM6000**. The **BS200** is a new model intended to for a different market area.

The BS200 is the base station for the HME DX200 wireless intercom intended for theatre, churches, and other similar small venues with communication requirements. The portable used with the BS200 is the BP200, which is under a separate application to be added to the above mentioned family certification. The BS200 and BS6000 differ in their physical interface, baseband audio processing boards and enclosures, but share a common radio/antenna section as shown below:

The user operable switches and indicators have been moved to the front panel in the BS200. All RF frequency components remain unchanged.
