PAGE: TABLE OF CONTENTS

GENERAL INFORMATION REQUIRED
FOR TYPE ACCEPTANCE

2.1033 (C)(1)(2) AZDEN CORPORATION will manufacture the
BZB32BTH in quantity, for use under FCC
RULES PART 74.801, LOW POWER AUXILIARY STATIONS.

2.1033 (C)(1) TECHNICAL DESCRIPTION

(4) Type of Emission: 50K0F3E

Bn = 2M + 2DK

M = 1000

D = 10.0KHz (Peak Deviation)

K = 1

Bn = 2(1K) + 2(10.0K)(1) = 2K + 20.0K = 22.0KHz

M = 15,000

D = 10KHz

K = 1

Bn = 2(15K) + 2(10K) = 30 + 20 = 50KHz

74.861(e)(5) ALLOWED AUTHORIZED BANDWIDTH = 200KHz.

(5) Frequency Range: Part 74: 161.625-161.775MHz &
174-216MHz

TEST FREQ = 184.020MHz.

(6) Power Range and Controls: UNIT has no power controls.

(7) Maximum Output Power Rating: 1.0 MilliWatts ERP.

(8) DC Voltages and Current into Final Amplifier:

FINAL AMPLIFIER ONLY

9.0V BATTERY

Vce = 8.9 Volts

Ice = 5.9mA.

Pce = 53.14mW

(9) Tune-up procedure. The tune-up procedure is given
in EXHIBIT #: 8.

2.1033(C) (10) Complete Circuit Diagrams: The circuit diagram is
included as EXHIBIT 6. The block diagram
is included as EXHIBIT 5.

(11) The equipment label is included at exhibit 2 and the
sketch of the label location is Exhibit #3.

(12) Photographs of the equipment are included as exhibit
#4.

(13) Digital modulation. This unit does not use digital
modulation.

FCC ID: BZB32BTH

DATE: APRIL 7, 2000

REPORT #: T:\CUS\A\AZDEN\AZD59A0\59A0.RPT

PAGE: 1

2.1033(C)(14) The data required by 2.1046 through 2.1057 is submitted below.

2.1046 RF_power_output.

ERP was measured by the method described later in this report. The input power to the final stage was measured with a 9.0V supply connected in place of the 1.5V battery.

INPUT POWER: FOR 9.0 V OPERATION
(8.9V)(0.0059A) = 53.14MilliWatts

OUTPUT POWER: FOR 9.0 V OPERATION
15.0 mWATTS ERP

R.F. POWER OUTPUT

Equipment placed 1 meter above ground on a rotatable platform. The center of the Dipole antenna at the center of the platform and the output of the signal generator adjusted to produce the same meter reading as measured for the fundamental in the radiated emissions test.

APPLICANT: AZDEN CORPORATION

REPORT #: T:\CUS\A\AZDEN\AZD59A0\59A0.RPT

PAGE: 2

2.1047 Modulation characteristics:

(a) AUDIO_FREQUENCY_RESPONSE

The audio frequency response was measured in accordance with TIA/EIA Specification 603 S2.2.6.2.1. with the following exceptions;

Constant Deviation Test

1. The test receiver audio bandwidth was <50Hz to >20,000Hz.
2. Apply a 1000Hz tone and adjust the audio generator to produce 10% of the rated system deviation.
3. Measure frequency response over the frequency range from 100Hz to 20,000Hz.

The audio frequency response curve is shown in EXHIBIT # 10.

(b) MODULATION LIMITING

2.1049 (c) Occupied bandwidth: Using TIA/EIA 2.2.10 Accoustic Microphone Sensitivity test procedure to determine if the UUT could be put into modulation limiting and limiting could not be reached, the maximum deviation was only +40KHz. Using this test procedure the frequency of maximum sensitivity was determined to be 500Hz.

a.

Test procedure diagram
OCCUPIED BANDWIDTH MEASUREMENT

2.1049 Occupied Bandwidth (cont)

b. Since the UUT could not be put into modulation limiting with an acoustic coupling a dummy microphone was used to connect to the UUT and a test procedure similar to TIA/EIA-603 S2.2.11 was used to measure the occupied bandwidth. Plots were made of the frequency of maximum sensitivity, at 10KHz and at the highest frequency for the UUT. Data in the plots show that all sidebands beyond the authorized bandwidth are less than 0.5% of the unmodulated carrier. The plot show the transmitter modulated with 10,000 Hz(the highest modulation frequency), adjusted for 50% modulation plus 16 dB. The spectrum analyzer was set with the unmodulated carrier at the top of the screen. The test procedure diagram and occupied bandwidth plots follow.

Test procedure diagram

OCCUPIED BANDWIDTH MEASUREMENT

REQUIREMENT: PART 74: 200kHz EMISSION BANDWIDTH.

2.1051 Spurious Emissions at antenna Terminals.

APPLICANT: AZDEN CORPORATION

FCC ID: BZB32BTH

DATE: APRIL 7, 2000

REPORT #: T:\CUS\A\AZDEN\AZD59A0\59A0.RPT

PAGE: 4

2.1053(a)(b) Field strength of spurious emissions:

NAME OF TEST: RADIATED SPURIOUS EMISSIONS

REQUIREMENTS: Emissions must be $43 + 10\log(P_o)$ dB below the mean power output of the transmitter.

$$43 + 10 \log(0.015) = 43 - 18.2 = 25.0 \text{ dB}$$

TEST DATA:

EMISSION FREQUENCY MHZ	ATT. LEVEL dBuV/m	MARGIN dB
184.02	0.00	00.00
368.00	55.15	30.15
552.10	57.30	32.30
736.10	55.23	30.23
920.10	56.80	31.80
1104.10	70.80	45.80
1288.20	74.37	49.37
1472.20	73.43	48.43

METHOD OF MEASUREMENT: The procedure used was TIA/EIA 603 paragraph 2.2.12. The spectrum was scanned from 30 to at least the tenth harmonic of the fundamental using a HP model 8566B spectrum analyzer, an Eaton model 94455-1 Biconical Antenna, ElectroMetrics antennas models TDA, TDS-25-1, TDS-25-2 RGA 180. Measurements were made at the open field test site of TIMCO ENGINEERING INC. located at 849 NW SR 45 ROAD, NEWBERRY, FL. 32669.

2.1055(a)(b)(d) Frequency stability:

Temperature and voltage tests were performed to verify that the frequency remains within the .0050%, (50 ppm) specification limit.

The test was conducted as follows: The transmitter was placed in the temperature chamber at 25 degrees C and allowed to stabilize for one hour. The transmitter was keyed ON for one minute during which four frequency readings were recorded at 15 second intervals. The worse case number was taken for temperature plotting. The assigned channel frequency was considered to be the reference frequency. The temperature was then reduced to -30 degrees C after which the transmitter was again allowed to stabilize for one hour. The transmitter was keyed ON for one minute, and again frequency readings were noted at 15 second intervals. The worst case number was recorded for temperature plotting. This procedure was repeated in 10 degree increments up to + 50 degrees C.

MEASUREMENT DATA:

Assigned Frequency (Ref. Frequency): 184.025 100MHz

TEMPERATURE_C	FREQUENCY_MHz	PPM
-30	184.027 147	+11.10
-20	184.027 413	+12.55
-10	184.027 458	+12.79
0	184.027 231	+11.56
10	184.026 781	+ 9.11
20	184.026 035	+ 5.06
30	184.025 120	+ 1.17
40	184.024 512	- 3.22
50	184.023 610	- 8.12

25c END BATT. Volt(9.0)= 7.65VDC 184.025 117 + 0.07

RESULTS OF MEASUREMENTS: The maximum frequency variation over the temperature range was - 8.12 to +12.79 ppm. The maximum frequency variation at the battery end-point was +0.07 ppm.
