Swift Pair

When you first turn on the keyboard, it will go into pairing mode. For PCs that support Swift Pair¹, a notification will pop up in the lower right corner saying that your keyboard has been found. Select **Connect**.

Pairing manually

- 1 Press and hold the pair key for 3 seconds. The light will blink when it's ready to pair.
- 2 Open the Windows 10 **Start** menu, then select **Settings** > **Devices** > **Bluetooth & other devices** > **Add Bluetooth or other device** > **Bluetooth**.

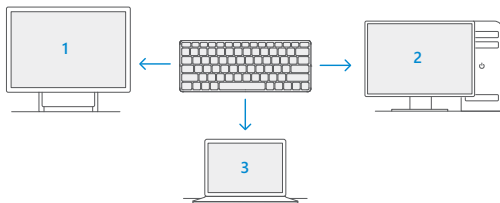

Select **Designer Compact Keyboard**.

¹ Swift Pair is available on Windows 10 with the latest updates. For information about how to install the latest updates to Windows 10, visit **aka.ms/updatewindows**.

Pair up to 3 devices

The lights on the pair key indicate which device is active. Press the pair key quickly to select a different device. Repeat the pairing steps from the previous page for each device.

Stay healthy

Important safety information for your keyboard, including information about musculoskeletal disorders (MSDs), is available at **aka.ms/KeyboardSafety**.

Special keys and customizations

The Expressive Input key can be used to quickly insert emojis, symbols, and more.¹

The Snipping key allows you to quickly take a rectangular, freeform, or full-screen clipping that can easily be shared.¹

To customize hot keys, install the Microsoft Mouse and Keyboard Center² at **aka.ms/MouseAndKeyboard**.

¹ Only compatible with Windows 10 with the latest updates.

² Microsoft Mouse and Keyboard Center is not compatible with Windows 10 in S mode.
