SUBJECT: Class II Permissive Change for FCC ID: C3K2107, Model: 2107

The certified module (FCC ID: C3K2107) has been integrated into the Microsoft Portable Computing Device/ Model: 2107 with the approval date of 01/27/2025 (DSS, DTS, NII, 6CD). Compared to the previous filing for the dedicated host, the changes filed under this application are:

1. Changing the host labeling method to e-label.
2. Enabling the host 6GHz Very Low-Power capability via embedded software, based on the original module grant date 01/27/2026 (6VL).

The module installed into host platform mentioned above is electronically and mechanically identical to the original certified module. Software security remains unchanged from the original application. The Original FCC testing on module under FCC ID: C3K2107 was performed with an antenna of higher gain, and the antenna was connected to the module in an open environment. The current host platform under application uses an antenna of the same type but of lower gain and is installed inside the host platform enclosure. The physical restraints introduced by the host platform should have resulted in equal or lower level of radiated emission. Therefore, additional Radiated emission testing is not necessary.

Best Regards,
