5.3 Operation Mode

Connect the EUT to personal computer via a 1.5 meter length USB cable. The EUT transmitted continuously during all the tests.

5.4 Documentation of test device

Documentation of the tested device has been reviewed by Hyper Corporation Engineers and found to be in compliance with applicable test specifications. All documentation is kept at Hyper Corporation's Quality Department in the Microsoft Cyan EMC Test Folder.

5.5 General and Special Conditions

The EUT was tested using a fully charged battery. Battery voltages were checked often and changed if not at full capacity. All testing was done in an indoor controlled environment with an average temperature of 24° C and relative humidity of 40%.

5.6 Equipment and Cable Configurations

The EUT was tested in a stand-alone configuration that is representative of typical use. As a stand-alone device there are no cabling considerations.

6. Test Setup

6.1 Carrier Frequency Separation

6.1.1 Operation Environment

Temperature: 25.8°C

Relative Humidity: 45%

6.1.2 Test procedure

The carrier frequency separation per FCC 15.247(a)(1)/IC RSS210 6.2.2(o)(a1) was measured using a spectrum analyzer with the resolution (or IF) bandwidth (RBW) $\geq 1\%$ of the span, the span should be wide enough to capture the peaks of two adjacent channels, and the video (or average) bandwidth (VBW) should be $\geq$ RBW. The carrier frequency separation result is described as below:

6.1.3 Measured data

Channel	Frequency (MHz)	Measurement Frequency Separation (MHz)
1	2440.010	
2	2441.015	1.005
3	2442.000	0.085

6.2 Number of Hopping Frequencies

6.2.1 Operation Environment

Temperature: 25.8°C

Relative Humidity: 45%

6.2.2 Test procedure

The carrier frequency separation per FCC 15.247(a)(1)(ii)/ IC RSS210 6.2.2(o)(a3) was measured using a spectrum analyzer with $RBW \geq 1\%$ of the span. The VBW is $\geq RBW$ and the span shall be equal to the frequency band of operation. The number of hopping frequencies measured data is shown below.

6.2.3 Measured data of test results

Frequency Range (GHz)	Number of hopping frequencies	Total hopping channels
2.400 ~ 2.430	28	79
2.430 ~ 2.460	30	
2.460 ~ 2.480	21

6.3 Time of Occupancy (Dwell Time)

6.3.1 Operation Environment

Temperature: 25.8°C

Relative Humidity: 46%

6.3.2 Test procedure

The Time of Occupancy test case per FCC 15.247(a)(1)(ii)/ IC RSS210 6.2.2(o)(a3) was measured using a spectrum analyzer with RBW = 1 MHz. The VBW $\geq$ RBW and the zero span function of spectrum analyzer was enabled.

The time of occupancy (Dwell Time) is (7 X 2.914 ms) (dwell time in 2 sec) X 15 = 305.97 ms = 0.30597 sec < 0.4s in 30 sec.

Relative Humidity: 40%

6.4.2 Test procedure

The 20dB bandwidth per FCC 15.247(a)(1)(ii)/ IC RSS210 6.2.2(o)(a1) was measured using spectrum analyzer with the resolution bandwidth set at 100 kHz.
