2.3 Traceability

All measurement equipment calibrations are traceable to NML(Taiwan)/NIST(USA) or where calibration is performed outside Taiwan, to equivalent nationally recognized standards organizations.

2.4 Calibration

Equipment requiring calibration is calibrated periodically by the manufacturer or according to manufacturer's specifications. Additionally all equipment is verified for proper performance on a regular basis using in house standards or comparisons.

2.5 Measurement Uncertainty

The estimated combined standard uncertainty for radiated emissions and conducted emissions measurements are $\pm 3\text{dB}$.

3. General Product Information

3.1 Product Function and Intended Use

"The EUT is a multi-purpose solution for reading RFID activated library items on 13.56 MHz. The product can be used as a desktop solution or can be mounted under a (non-metal) table. The reader and antenna terminals are both based on the 50 Ω standard, which allows for the length of the cable between the antenna and the reader to be altered."

For details refer to the User Guide, Data Sheet and Circuit Diagram.

The EUT was tested with the Antenna MidRange 50 Ohm, Model No.: 9564918

For more details refer to the User Guide, Data Sheet and Circuit Diagram.

5.1 Transmitter Requirement & Test Suites

5.1.1 Antenna Requirement

RESULT:**Passed**

Standard : FCC Part 15.203 and RSS-Gen 7.1.4

Requirement : use of approved antennas only

The antenna is connected with a SMA connector. However, the system will always be professionally installed, thus there is no possibility of replacement with a non-approved antenna by the end-user of the system. Therefore, the EUT is considered to comply with this provision.
