2 Technical test

2.1 Summary of test results

The antenna gain measurement was performed by the difference between conducted and radiated output measurement.

All measurement settings were according to FCC 15.35, 15.209, 15.247 and the „Guidance on measurement for DSSS systems“.

The settings for RBW, VBW and sweep time are according to FCC requirements.

The radiated measurements were performed with a Toshiba Laptop Satellite 1800, the conducted and extreme tests were performed with an extender card in a Desktop PC.
For processing gain see separate paper provided by LUCENT.

FREQUENCY STABILITY

SUBCLAUSE §15.231 (d)

Method of Measurement:

In order to measure the carrier frequency of the MINI PCI Module under extreme conditions, it is necessary to make measurements with the use of a R&S FSIQ26 SIGNAL ANALYZER.

1. Measure the carrier frequency at room temperature.
2. Subject the card in an adapter connected to a desktop PC at + 20 degrees C.
3. With the card, powered via an external power supply at 3.135 Volt, connected to the FSIQ26 and in a continuous TX-mode at channel 7 (center channel), measure the carrier frequency. These measurements should be made within 2 minutes of powering up the card, to prevent significant self warming.
4. Repeat the measurement with a voltage variation of 0.05 Volt up to 3.465 Volt. (3.3 Volt $\pm$ 5%)
5. Repeat the above measurements at 5 C increments from +5 degrees C to +35 degrees C and a power voltage of 3.3V DC. Allow at least 1/2 hours at each temperature, unpowered, before making measurements.
6. At all temperature levels hold the temperature to +/- 0.5 C during the measurement procedure.

Measurement Limit:

According to the FCC 15.231 standard the frequency stability of the carrier shall be $\pm 0.01\%$ (244.2 kHz). This minipci card is specified to operate with an input voltage of between 3.135 Vdc and 3.465 Vdc, with a nominal voltage of 3.3 Vdc.. Operation above or below these voltage limits is prohibited. For the purposes of measuring frequency stability these voltage limits are to be used.
