1.5 Test item

Type of equipment : Laptop with integrated Bluetooth module
Type designation : Portege 4000
Manufacturer : - applicant -
Street :
City :
Country :
Serial number :
Additional informations: :
Frequency : 2402 – 2480 MHz
Type of modulation : 1M00FXD (FHSS) Ch.Sep. : 1 MHz
Number of channels : 79
Antenna : integral antenna
Power supply : 5.0 DC powered by USB port
Output power cond. : 1 mW
Type of equipment : Class B
Temperature range : +5°C - +35°C

1.6 Test standards: FCC Part 15 §15.247

Equipment under test : Portege 4000**Ambient temperature : 25°C****Relative humidity : 47%****2 Technical test****2.1 Summary of test results**

The radiated measurements were performed with the antenna inside the laptop.

The radiated measurements were performed vertical, horizontal results are about 6 dB lower over the complete frequency range.

The antenna gain measurement was performed by the difference between conducted and radiated output measurement.

The conducted power measurement was performed by a temporary added coax adapter.

All measurement settings are according to FCC 15.35, 15.205, 15.209, 15.247 and the „Measurement guidelines for FHSS systems“.

No deviations from the technical specification(s) were ascertained in the course of the tests performed.

The product fullfills also the requirements for CANADA RSS-210.

TEST REPORT

Testreport no. : 2-2509-I/01

Equipment under test : Portege 4000**Ambient temperature : 25°C****Relative humidity : 47%****TEST REPORT REFERENCE****LIST OF MEASUREMENTS**

Paragraph	PARAMETER TO BE MEASURED	PAGE
	Transmitter parameters	
§ 15.204	Antenna gain	7
§ 15.247 (a)	Carrier frequency separation	8
§ 15.247 (a)	Number of hopping channels	9
§ 15.247 (a)	Time of occupancy (dwell time)	13
§ 15.247 (a)(1)	Spectrum bandwidth of a FHSS System	18
§ 15.247 (b)(2)	Maximum peak output power	23
§15.247	Band edge compliance	28
§ 15.247 (c)(1)	Emission limitations	32
§ 15.107/207	low frequency emissions	58
	Receiver parameters	
§ 15.209	Spurious radiations - Radiated	60
	Test equipment listing	67
	Photographs of the equipment	69

Equipment under test : Portege 4000**Ambient temperature : 25°C****Relative humidity : 47%****Antenna Gain****SUBCLAUSE § 15.204**

The antenna gain of the complete system is calculated by the difference of conducted power of the module and the radiated power in EIRP.

	low channel	mid channel	high channel
Conducted power	-2.99 dBm	-3.19 dBm	-2.7dBm
Radiated power (antenna inside laptop)	-6.2 dBm	-6.3 dBm	-6.5 dBm
Gain	-3.21 dB	-3.11 dB	-3.8 dB

The calculated antenna gain is between –3.11 and –3.8 dB for the build-in antenna.

Equipment under test : Portege 4000

Ambient temperature : 25°C

Relative humidity : 47%

Time of occupancy (dwell time) for DH1

§15.247(a)

The system makes worst case 1600 hops per second or 1 time slot has a length of 625µs with 79 channels. A DH1 Packet need 1 time slot for transmitting and 1 time slot for receiving. Then the system makes worst case 800 hops per second with 79 channels. So you have each channel 10.13 times per second and so for 30 seconds you have 303.9 times of appearance .

Each tx-time per appearance is 475 µs.

So we have $303.9 * 420 \mu s = 127.6ms$ per 30 seconds.

Date: 24 JUL.2001 08:02:26

Equipment under test : Portege 4000

Ambient temperature : 25°C

Relative humidity : 47%

Time of occupancy (dwell time) for DH3

§15.247(a)

A DH3 Packets need 3 time slots for transmit and 1 for receicing, then the system makes worst case 400 hops per second with 79 channels. So you have each channel 5.1 times per second and so for 30 seconds you have 153 times of appearance .

Each tx-time per appearance is 1.67 ms.

So we have $153 * 1.67 \text{ ms} = 25551 \text{ ms}$ per 30 seconds.

Date: 24.JUL.2001 09:38:49

Equipment under test : Portege 4000

Ambient temperature : 25°C

Relative humidity : 47%

Time of occupancy (dwell time) for DH5

§15.247(a)

At DH5 Packets you need 5 time slots for transmit and 1 for receicing,then the system makes worst case 266,7 hops per second with 79 channels. So you have each channel 3.36 times per second and so for 30 seconds you have 100,8 times of appearance .

Each tx-time per appearance is 3.7 ms.

So we have $100,8 * 3.76\text{ms} = 379 \text{ ms}$ per 30 seconds.

Date: 24.JUL.2001 09:40:55

Equipment under test : Portege 4000

Ambient temperature : 25°C

Relative humidity : 47%

Time of occupancy (dwell time) for page and inquiry mode

§15.247(a)

At this mode the system makes first hopping with 16 channels. One sequence(called train A) lasts 10 ms. Every 1.28s frequencies change and a second train A starts with different frequencies. After max $7 \cdot 1.28$ s 16 new more distance frequencies (Train B) are used.

So we have in the worst case (same frequency is in every train) the following time scedule.

First: $7 \cdot 128 \cdot 10$ ms. For the next 7 seconds train B with other frequencies.

Then train A and B changes frequently.

⇒ so we have $7 \cdot 112 \cdot 180 \mu$ s, then 8.96 s other frequencies, then again $7 \cdot 112 \cdot 180 \mu$ s

⇒ together in 30 s maximal 2 sequences => maximal 0,282 s per 30 second period.

Page mode/Inquiry mode (TX-on time)

Equipment under test : Portege 4000

Ambient temperature : 25°C

Relative humidity : 47%

EMISSION LIMITATIONS- Conducted

§ 15.247 (c) (1)

Receiver 12-25 GHz average

Equipment under test : Portege 4000

Ambient temperature : 25°C

Relative humidity : 47%

EMISSION LIMITATIONS- Radiated

Receiver

§ 15.247 (c) (1)

Equipment under test : Portege 4000

Ambient temperature : 25°C

Relative humidity : 47%

EMISSION LIMITATIONS- Radiated

Receiver

§ 15.247 (c) (1)

The measurements were performed up to 25 GHz.

There were no peaks found.

Equipment under test : Portege 4000

Ambient temperature : 25°C

Relative humidity : 47%

TEST EQUIPMENT AND ANCILLARIES USED FOR TESTS

To simplify the identification on each page of the test equipment used, on each page of the test report, each item of test equipment and ancillaries such as cables are identified (numbered) by the Test Laboratory, below.

No	Instrument/Ancillary	Type	Manufacturer	Serial No.
01	Spectrum Analyzer	8566 A	Hewlett-Packard	1925A00257
02	Analyzer Display	8566 A	Hewlett-Packard	1925A00860
03	Oscilloscope	7633	Tektronix	230054
04	Radio Analyzer	CMTA 54	Rohde & Schwarz	894 043/010
05	System Power Supply	6038 A	Hewlett-Packard	2848A07027
06	Signal Generator	8111 A	Hewlett-Packard	2215G00867
07	Signal Generator	8662 A	Hewlett-Packard	2224A01012
08	Funktionsgenerator	AFGU	Rohde & Schwarz	862 480/032
09	Regeltrenntrafo	MPL	Erfi	91350
10	Netznachbildung	NNLA 8120	Schwarzbeck	8120331
11	Relais-Matrix	PSU	Rohde & Schwarz	893 285/020
12	Power-Meter	436 A	Hewlett-Packard	2101A12378
