

TOSHIBA

TOSHIBA CORPORATION OME OPERATIONS
DIGITAL MEDIA NETWORK COMPANY
2-9, SUEHIRO-CHO, OME, TOKYO 198-8710, JAPAN

To whom it may concern:

In reference to Satellite 1800 testreport 2-2509-A/01, and 2-2509-C/01, issued by
CETECOM ICT Services GmbH

We,

Toshiba Corporation Digital Media Network Company
2-9, SUEHIRO-CHO, OME,
TOKYO 198-8710
Japan

hereby declare and ensure the following:

Any Wi-Fi compatible devices (Wireless Lan) that bears FCC ID:CJ6PS180WL
that are sold in the United State will keep the following technical data as
a Maximum:

Conducted Output Power $\leq$ 20dBm

This data can be ensured depending on:

- Our OEM supplier (Agere, formerly Lucent) does warrant that all modules that Toshiba uses are measured by 100% before shipment takes place to Toshiba. All relevant data is stored at Agere side and can be provided on request.
- Toshiba itself on it's manufacturing lines performs tests according to the international recognised so called AQL (Acceptable Quality Level) system.

By utilising this system, plus the pre-testing at Agere we can ensure that we as Toshiba keep the specified data as above for worldwide product shipments.

Furthermore, the Toshiba computer manufacturing facility is certified according to the rules and standards of the ISO 900X system, which ensures in terms of quality assurance procedures a sufficient level.

Kind regards

Date: 4. June 01
