The image shows the reverse side of a Raspberry Pi Zero W PCB. Key features include:

- Connectors:** A USB-C port at the top center and a micro-USB port below it.
- Microcontroller:** The BCM2837 SoC is visible near the bottom center.
- Memory:** An 8MB eMMC chip is located near the top right.
- Antenna:** A small antenna is mounted near the top right corner.
- Labels:** Various labels are present, including "RESET_N", "SM_PWR", "I2C_CLK", "I2C_DATA", "I2C_RST", "DBG_TX", "DBG_RX", "EXT_I2C", "OL_OAD", "DC_M_L1", "VIBUS", "USB_DM", "USB_DP", and "GND".
- Ruler:** A metric ruler is placed vertically along the left edge, indicating dimensions from 0 to 100 mm.

A close-up photograph of a green printed circuit board (PCB) with various electronic components. The central focus is a black integrated circuit (IC) with the text 'RTL8192ES' and '151F0G1 G124' printed on it. Above the text is a logo featuring a stylized bird or wing design. The IC is surrounded by numerous surface-mount components, including capacitors, resistors, and smaller ICs. The PCB has white silkscreen markings, including 'DC' and 'DIV'. The overall image is slightly blurred, suggesting it was taken with a camera.
