0 Summary

0.1 Technical Report Summary

Type of Authorization:

Certification for an Intentional Radiator (Periodic operation in the band above 70 MHz)

Applicable FCC Rules:

Prepared in accordance with the requirements of FCC Rules and Regulations as listed in 47 CFR Ch.1 Parts 0 to 19 (10-1-98 Edition). The following subparts are applicable to the results in this test report.

Part 2, Subpart J - Equipment Authorization Procedures, Certification Sections

Part 15, Subpart C - Intentional Radiators

§ 15.201 Equipment authorization requirement

§ 15.207 Conducted limits (not applicable for battery powered equipment)

§ 15.209 Radiated emission limits; general requirements

§ 15.231 Periodic operation in the band 40.66-40.70 MHz, above 70 MHz

Note:
none

Summary Test Results:

The EUT complied with all the applicable FCC rules as listed above.

0.2 Measurement Summary

FCC Part 15, Subpart C,231 § 15.231(b)

Spurious Radiated Emissions

The measurement was performed according to ANSI C63.4 1992

OP-Mode	Setup	Port	Final Result
op-mode 2	setup 1	enclosure	passed

FCC Part 15, Subpart C,231

Dwell Time measurement to determine the duty cycle

The measurement was performed according to FCC §15.31 10-1-1998

OP-Mode	Setup	Port	Final Result
op-mode 1	setup 1	enclosure	

FCC Part 15, Subpart C,231 § 15.231(a)

Occupied Bandwidth

The measurement was performed according to ANSI C63.4 1992

OP-Mode	Setup	Port	Final Result
op-mode 1	setup 1	enclosure	passed

1. Administrative Data

1.1 Testing Laboratory

Company Name: 7 Layers AG
Address: Borsigstr. 11
40880 Ratingen
Germany

This facility has been fully described in a report submitted to the FCC and accepted in a letter dated February 07, 2000 under the registration number 96716.

The test facility is also accredited by the following accreditation organisation:

- Deutscher Akkreditierungs Rat DAR-Registration no. TTI-P-G 178/99

Responsible for Accreditation Scope: Dipl.-Ing Bernhard Retka
Dipl.-Ing Arndt Stöcker

1.2 Project Data

Responsible for testing and report: Robert Machulec
Receipt of EUT: 05.09.2002
Date of Test(s): 12.09.2002-16.09.2002
Date of Report: 17.09.2002

1.3 Applicant Data

Company Name: ALPS Automotive Inc.
Address: 1500 Atlantic Boulevard

48326 Auburn, Michigan
USA
Contact Person: Mr. Don Clark

1.4 Manufacturer Data

Company Name: please see Applicant data
Address:

Contact Person:

2.0 Product Labeling

2.1 FCC ID Label:

At the time of the test report there was no FCC label available

2.2 Location of Label on the EUT:

see above

3. Testobject Data

3.1 General EUT Description

Equipment under Test:	vehicle remote keyless entry transmitter
Type Designation:	4F2T-15K601-A
Kind of Device: (optional)	315 MHz transmitter
Voltage Type:	DC
Voltage level:	3.0 V

General product description:

The vehicle remote keyless entry transmitter 4F2T-15K601-A is a wireless handheld remote control unit.

(Transmitter only, periodic operation in the band above 70 MHz)

the operating frequency is 315 MHz.

The transmitter is activated manually by a switch and is deactivated automatically within 5 seconds after release of the switch.

The vehicle remote keyless entry transmitter 3L7T-15K601-A and 3F2T-15K601-A are identical built except of the push button configuration.

The EUT provides the following ports:

Ports

enclosure

The main components of EUT are listed and described in Chapter 3.2

3.2 EUT Main components:

Type, S/N, Short Descriptions etc. used in this Test Report

Short Description	Equipment under Test	Type Designation	Serial No.	HW Status	SW Status	Date of Receipt
EUT A	vehicle remote keyless entry transmitter	4F2T-15K601-A	-	-	-	05.09.2002

wireless handheld remote control unit, transmitter only

NOTE: The short description is used to simplify the identification of the EUT in this test report

3.3 Ancillary Equipment

For the purposes of this test report, ancillary equipment is defined as equipment which is used in conjunction with the EUT to provide operational and control features to the EUT. It is necessary to configure the system in a typical fashion, as a customer would normally use it. But never the less Ancillary Equipment can influence the test results.

Short Description	Equipment under Test	Type Designation	HW Status	SW Status	Serial No.	FCC Id
-------------------	----------------------	------------------	-----------	-----------	------------	--------

3.4 EUT Setups

This chapter describes the combination of EUT's and ancillary equipment used for testing.

Setup No.	Combination of EUTs	Description
setup 1	EUT A	

3.5 Operating Modes

This chapter describes the operating modes of the EUT's used for testing.

Op. Mode	Description of Operating Modes	Remarks
op-mode 1	periodic operation	Transmitter is sending a pulse coded singnal (periodic operation)
op-mode 2	continues operation	Transmitter is sending a CW singnal. (continues operation)

4. Test Results

4.1 Spurious Radiated Emissions

Standard FCC Part 15, 10-1-98
Subpart C,231

The test was performed according to: ANSI C63.4 1992

4.1.1 Test Description

The test set-up was made in accordance to the general provisions of ANSI C63.4-1992.

The Equipment Under Test (EUT) was set up on a non-conductive table 1.0 x 2.0 m in the semi-anechoic chamber. The test was performed at an EUT to receiving antenna distance of 3m.

The radiated emissions measurements was made in a typical installation configuration.

The measurement procedure consists of four steps. It is implemented into EMI test software ES-K1 from R&S.

Step 1: Preliminary scan

Preliminary test to identify the highest amplitudes relative to the limit.

Settings for step 1:

- Detector: Peak-Maxhold
- Frequency range: 30 – 1000 MHz
- Frequency steps: 60 kHz
- IF-Bandwidth: 120 kHz
- Measuring time / Frequency step: 100 µs
- Turntable angle range: –180 to 180 °
- Turntable stepsize: 90°
- Height variation range: 1 – 3m
- Height variation stepsize: 2m
- Polarisation: Horizontal + Vertical

Intention of this step is, to determine the radiated EMI-profile of the EUT. With this data, the test system performs (to reduce the number of final measurements) a data reduction with the following parameters:

- Offset for acceptance analysis: Limit line – 10 dB
- Maximum number of final measurements: 12

Step 2:

With the frequencies determined in step 1, an additional measurement with the following settings will be performed. Intention of this step is, to find out the approximate turntable angle and antenna height for each frequency.

Settings for step 2:

- Detector: Peak – Maxhold
- Measured frequencies: in step 1 determined frequencies
- IF – Bandwidth: 120 kHz
- Measuring time: 100ms
- Turntable angle range: –180 to 180 °
- Turntable stepsize: 45°

- Height variation range: 1 – 4m
- Height variation stepsize: 0,5m
- Polarisation: horizontal + vertical

After this step the EMI test system has determined the following values for each frequency (of step 1):

- Frequency
- Azimuth value (of turntable)
- Antenna height

The last two values have now the following accuracy:

- Azimuth value (of turntable): 45°
- Antenna height: 0,5m

Step 3:

In this step the accuracy of the turntable azimuth and antenna height will be improved. This is necessary to find out the maximum value of every frequency.

For each frequency the turntable azimuth and antenna height, which was determined in step 3, will be adjusted.

The turntable azimuth will be slowly varied by +/- 22,5° around this value. During this action the value of emission is continuously measured. The turntable azimuth at the highest emission will be recorded and adjusted. In this position the antenna height is also slowly varied by +/- 25 cm around the antenna height determined in step 3. During this action the value of emission is also continuously measured. The antenna height of the highest emission will also be recorded and adjusted.

Settings for step 3:

- Detector: Peak – Maxhold
- Measured frequencies: in step 1 determined frequencies
- IF – Bandwidth: 120 kHz
- Measuring time: 100ms
- Turntable angle range: -22,5° to + 22,5 ° around the value determined in step 2
- Height variation range: -0,25m to + 0,25m around the value determined in step 2

Step 4:

With the settings determined in step 3, the final measurement will be performed:

EMI receiver settings for step 4:

- Detector: Quasi-Peak(< 1GHz)
- Measured frequencies: in step 1 determined frequencies
- IF – Bandwidth: 120 kHz
- Measuring time: 1s

The following modifications apply to the measurement procedure for the frequency range

above 1 GHz:

The measurement distance was reduced to 1m. The results were extrapolated by the extrapolation factor of 20 dB/decade (invers linear-distance for field strength measurements, invers linear-distance squared for the power reference level measurements). Due to the fact that in this frequency range a double ridged wave guided horn antenna (up to 18 GHz) and a horn antenna (18-25 GHz) are used, the steps 2-4 are omitted. Step 1 was performed with one height of the receiving antenna only.

Detector: Peak, Average
RBW = VBW = 1 MHz, above 7 GHz 100 kHz

After the measurement a plot will be generated which contains a diagram with the results of the preliminary scan and a chart with the frequencies and values of the results of the final measurement.

4.1.2 Test Limits

FCC Part 15, Subpart C, §15.231(b)

(1) A radiated emission test applies to the fundamental frequency.

Frequency Range (MHz):	Limit (dBµV/m)
40.66 – 40.70	67,04
70 – 130	67,04
130 – 174	67,04 – 71.48
174 – 260	71.48
260 – 470	71.48 – 81.93
above 470	81.93

(2) A radiated emission test applies to harmonic/spurs that fall in the restricted bands as listed in § 15.205(a). The maximum permitted QP (< 1GHz) and average (> 1GHz) field strength is listed in § 15.209(a).

(3) FCC Part 15, Subpart C, §15.209, Radiated Emission Limits

Frequency Range (MHz):	Class B Limit (dBµV/m)
30 – 88	40,0
88 – 216	43,5
216 – 960	46,0
above 960	54,0

§15.35(b)

..., there is also a limit on the radio frequency emissions, as measured using instrumentation with a peak detector function, corresponding to 20 dB above the maximum permitted average limit....

Used conversion factor: $\text{Limit (dBµV/m)} = 20 \log (\text{Limit (µV/m)}/1\mu\text{V/m})$

4.1.3 Test Protocol

Temperature: 27°C
Air Pressure: 1012 hPa
Humidity: 38%

Op. Mode	Setup	Port	Test Parameter
op-mode 2	setup 1	enclosure	

Polarisation	Frequency MHz	Corrected Value dBµV/m			Limit QP/AV dBµV/m	Limit Peak dBµV/m	Delta to AV/QP Limit/dB	Delta to Peak Limit dB
		QP	Peak	AV				
Vertical	315,00			74,00	75,60		1,60	
Vertical	630,00			55,20	55,60		0,40	
Vertical	945,00			47,40	55,60		8,20	
Vertical	1260,00			49,12	55,60		6,48	
Vertical	1575,00			37,75	54,00		16,25	
Vertical	1890,00			39,69	55,60		15,91	
Vertical	2205,00			47,29	54,00		6,71	
Vertical	2520,00			34,27	55,60		21,33	
Vertical	2835,00			34,81	54,00		19,19	
Vertical	3150,00			38,37	55,60		17,23	

Remark: The test was performed in the frequency range from 30MHz to 3.2GHz.
For this test a EUT sending a CW signal was used.
The valuelisted above includes the correction factor of the test system and the duty cycle of 1 /4 or -12 dB

4.1.3 Test result: Spurious Radiated Emissions

FCC Part 15, Subpart C,231		Op. Mode	Setup	Port	Result
		op-mode 2	setup 1	enclosure	passed

4.2 Dwell Time measurement to determine the duty cycle

Standard FCC Part 15, 10-1-98
Subpart C,231

The test was performed according to: FCC §15.31 10-1-1998

4.2.1 Test Description

The Equipment Under Test (EUT) was set up in a shielded room.

For analyzer settings please see measurement plots in annex.

4.2.2 Test Limits

Less than 5 seconds.

This test is also performed to determine the duty cycle of the transmitter and calculate the correction factor for pulse modulated transmitter.

This factor is used as a correction factor for the field strength measurement.

4.2.3 Test Protocol

Temperature: 25°C

Air Pressure: 1024 hPa

Humidity: 46 %

Op. Mode	Setup	Port	Test Parameter
op-mode 1	setup 1	enclosure	

Dwell time ms	Remarks
	DW-time measurement to determine the duty cycle. Please see annex for the measurement plot.

Remark: This test is performed to determine the duty cycle.

The on / off ratio within a cycle is 0.5.

The on / off ratio within a data word is 0.5.

The duty cycle is 0.25 or $20 \times \log(0.25) = -12\text{dB}$

4.2.3 Test result: Dwell Time measurement to determine the duty cycle

FCC Part 15, Subpart C,231	Op. Mode	Setup	Port	Result
	op-mode 1	setup 1	enclosure	

4.3 Occupied Bandwidth

Standard FCC Part 15, 10-1-98
Subpart C,231

The test was performed according to: ANSI C63.4 1992

4.3.1 Test Description

The Equipment Under Test (EUT) was set up in a shielded room.

For analyzer settings please see measurement plots in annex.

4.3.2 Test Limits

FCC Part 15, Subpart C, §15.231 (c)

The maximum 20 dB bandwidth of a transmitter operating at a frequency range:

70 MHz to 900 MHz is 0.25% of the center frequency

above 900 MHz : is 0.5% of the center frequency

4.3.3 Test Protocol

Temperature: 25°C

Air Pressure: 1024 hPa

Humidity: 46%

Op. Mode	Setup	Port	Test Parameter
op-mode 1	setup 1	enclosure	

20 dB Bandwidth MHz	Remarks
0,74	Please see annex for the measurement plot.

Remark: none

4.3.3 Test result: Occupied Bandwidth

FCC Part 15, Subpart C,231	Op. Mode	Setup	Port	Result
	op-mode 1	setup 1	enclosure	passed
