Important Product Information

LICENSING INFORMATION

Licensing: A ministerial license to operate this equipment may be required in certain areas. Consult your national authority for possible requirements. Changes or modifications not expressly approved by Shure Incorporated could void your authority to operate the equipment. Licensing of Shure wireless microphone equipment is the user’s responsibility, and licensability depends on the user’s classification and application, and on the selected frequency. Shure strongly urges the user to contact the appropriate telecommunications authority concerning proper licensing, and before choosing and ordering frequencies.

Information to the user

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Industry Canada licence-exempt RSS standard(s). Operation of this device is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation de cet appareil est autorisée aux deux conditions suivantes : (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

WARNING: Danger of explosion if battery incorrectly replaced. Operate only with Shure compatible batteries.

Note: Use only with the included power supply or a Shure-approved equivalent.

WARNING

- Battery packs may explode or release toxic materials. Risk of fire or burns. Do not open, crush, modify, disassemble, heat above 140°F (60°C), or incinerate.
- Follow instructions from manufacturer
- Only use Shure charger to recharge Shure rechargeable batteries
- WARNING: Danger of explosion if battery incorrectly replaced. Replace only with same or equivalent type.
- Never put batteries in mouth. If swallowed, contact your physician or local poison control center
- Do not short circuit; may cause burns or catch fire
- Do not charge or use battery packs other than Shure rechargeable batteries
- Dispose of battery packs properly. Check with local vendor for proper disposal of used battery packs.
- Batteries (battery pack or batteries installed) shall not be exposed to excessive heat such as sunshine, fire or the like

Australia Warning for Wireless

This device operates under an ACMA class licence and must comply with all the conditions of that licence including operating frequencies. Before 31 December 2014, this device will comply if it is operated in the 520-820 MHz frequency band.

WARNING: After 31 December 2014, in order to comply, this device must not be operated in the 694-820 MHz band.

Caution: Avoid operating mobile phones and mobile broadband devices near your wireless system to prevent the possibility of interference.

WARNING: This product contains a chemical known to the State of California to cause cancer and birth defects or other reproductive harm.
System Overview

QLX-D® Digital Wireless delivers defined, streamlined performance with transparent 24-bit digital audio. Combining professional features with simplified setup and operation, QLX-D offers outstanding wireless functionality for demanding live sound events and installations.

Shure digital wireless technology enables QLX-D to transmit clearly detailed audio with extended, virtually flat frequency response. Designed to be highly RF spectrum efficient, QLX-D can operate more than 60 compatible channels simultaneously in a single frequency band. Automatic channel scan and IR sync make finding and assigning an open frequency quick and easy. Ethernet connection provides networked channel scanning across multiple receivers and Shure Wireless Workbench® control software compatibility for advanced frequency coordination. AES-256 encryption comes standard and can be easily enabled for secure wireless transmission.

QLX-D also adds Shure rechargeable power options to provide dramatic long-term cost savings and extended transmitter battery life over alkaline batteries, and battery metering that reports remaining runtime in hours and minutes. With clearly defined performance and innovation, QLX-D delivers the very latest in digital wireless technology from Shure.

Features
- Transparent 24-bit digital audio
- Extended 20 Hz to 20 kHz frequency range (microphone dependent)
- 120 dB dynamic range
- Digital predictive switching diversity
- 64 MHz tuning bandwidth (region dependent)
- More than 60 available channels per frequency band (region dependent)
- Up to 17 compatible systems per 6 MHz TV band; 22 systems per 8 MHz band
- Easy pairing of transmitters and receivers over IR scan and sync
- Automatic channel scan
- Ethernet networking for multiple receiver systems
- Network channel scanning configures open frequencies for networked receivers
- Compatible with Shure Wireless Workbench® 6 control software
- Remote control from a mobile device or tablet via ShurePlus™ Channels app
- AES-256 encryption for secure wireless transmission
- Elegant and easy-to-use interface with high-contrast LCD menu
- Compatible with external control systems such as AMX or Crestron
- Professional-grade all-metal construction
- Transmitters use 2 AA batteries or Shure SB900 rechargeable battery

Full Manual Online
This guide is a quick reference covering the essential features and functions of the QLX-D system. A comprehensive version of the guide covering the following topics is available online by visiting www.shure.com
- Encryption
- Network Scan
- Networking
- Firmware Updates
- Wireless Workbench 6
- Setting IP Addresses and Subnet Masks
- Connecting to External Controls Systems (AMX/Creston)
- Transmitter RF Power
- Selecting Regional TV Bandwidth
- Combo Systems
- Custom Groups
- Optional Accessories

System Components

Model Variations
Model variations with additional components are available to meet specific performance situations.

QLXD2 Handheld Transmitter
Includes QLXD2 Handheld, available with any of the following microphone cartridges:
- SM58
- Beta 58A
- SM68
- Beta 87A
- SM87A
- Beta 87C
- KSM9
- KSM9HS (black)
  Microphone Clip
  Battery Contact Cover
  Zipper Bag

QLXD1 Bodypack Guitar System
Includes QLXD1 bodypack transmitter
WA305 Premium instrument cable
Zipper Bag

QLXD1 Bodypack Headworn or Lavaliier
Includes QLXD1 bodypack, available with any of the following microphone cartridges:
- Beta 98H/C
- WL93
- WL163
- WL184
- WL185
- MX150 (omni)
- MX150 (cardioid)
- MX153 (black or tan)
- SM35
  Zipper Bag

Bodypack and Handheld Combo System
- QLXD1 bodypack transmitter with WL185 Microflex cardioid lavalier microphone
- QLXD2 handhold transmitter with Shure SM58 microphone cartridge
- Battery Contact Cover
- Zipper Bag (2)
Quick Start

Step 1: Power and Antenna Connection
1. Connect an antenna to each of the antenna connectors.
2. Connect the power supply to the receiver and plug into an AC power source.
3. Connect the receiver audio output to a mixer or amplifier.
4. Press and hold the power button to turn on the receiver.

Step 2: Scanning for the Best Available Channel
1. Press the menu button on the receiver to access the scan function.
2. Press the enter button to start a frequency scan. The scan icon will flash while in scan mode. When the scan is complete, the selected group and channel appear on the display.

Step 3: Install Batteries into Transmitter
1. Accessing the Battery Compartment
   Press the side tabs on the bodypack or unscrew the cover on the handheld as shown to access the battery compartment.
2. Installing Batteries
   - AA Batteries: Place batteries (note polarity markings) and AA Adaptor as shown
   - Shure SB900 Battery: Place battery as shown (note polarity markings), remove AA Adaptor from bodypack transmitter, stow AA Adaptor in door for handheld transmitter

   Note: If using AA batteries, select a battery type from the transmitter menu to ensure accurate battery metering.

Step 4: IR Sync to Create an Audio Channel
1. Turn on the transmitter.
2. Press the sync button on the receiver. The red ir LED will blink indicating that sync mode is active.
3. Align the IR sync windows of the transmitter and receiver at a distance of <15 cm (6 in.). When the transmitter and receiver are aligned, the red ir LED remains on and the sync will automatically occur.
4. sync good appears on the display when IR sync is complete. The blue rf LED will illuminate indicating that the transmitter is within range of the receiver.

   Note: If the IR sync fails, repeat the IR sync procedure, carefully maintaining alignment between the IR windows of the transmitter and receiver.

Step 5: Sound Check and Gain Adjustment
1. Test the transmitter at performance levels while monitoring the audio meter and the audio LED. The audio meter should display at least 3 bars and the audio LED should be green. Reduce the gain if there is audible distortion of the audio.
2. Increase or decrease the gain if necessary by pressing the arrow buttons on the receiver front panel.
Hardware Interface

Receiver Front and Back Panels

- **Display**
  - Shows menu options, receiver and transmitter settings.
- **Arrow Buttons**
  - Adjust gain setting or change menu parameters.
- **Enter Button**
  - Press to save menu or parameter changes.
- **Sync Button**
  - Press to activate IR sync.
- **Power Switch**
  - Powers receiver on or off.
- **Audio LED**
  - Green = normal
  - Yellow = signal approaching limiter threshold
  - Red = limiter engaged to prevent clipping
- **Menu Button**
  - Press to access or select menu screens
  - Press to cancel pending changes
  - Press and hold to return to the home screen
- **RF LED**
  - Illuminates when RF link with transmitter is active.
- **IR Window**
  - Align with the transmitter IR window during an IR sync to automatically program transmitters.
- **Sync LED**
  - Blinking: IR sync mode is enabled
  - On: Receiver and transmitter aligned for IR sync
- **Power Cord Strain Relief**
  - Secures power cord.
- **Power Supply Jack**
  - Connection point for DC power supply.
- **Ethernet Port**
  - For network connection.
  - Amber LED (network speed): off = 10 Mbps, on = 100 Mbps
  - Green LED (network status): off = no network link, on = network link active
  - flashing = rate corresponds to traffic volume
- **Receiver Reset**
  - Press to restore receiver default settings.
- **Antenna Connectors**
  - BNC connector for receiver antennas
- **Mic/Line Switch**
  - Sets output level to microphone or line.
- **XLR Audio Output**
  - Balanced (1: ground, 2: audio +, 3: audio -)
  - 1/4" Instrument/Auxiliary Output
  - Impedance Balanced (Tip: audio, Ring: no audio, Sleeve: ground)
- **SB900 Battery Runtime**
  - Displays the number of TV channel components detected on the network.
  - Illuminates when additional Shure components are detected on the network.
  - Displays the number of hours minutes remaining runtime is displayed in.

Receiver Display

- **Group**
  - Displays group setting.
- **Channel**
  - Displays channel setting.
- **Active Antenna Indicator**
  - Illuminates to indicate which antenna is active.
- **RF Signal Meter**
  - Number of bars displayed corresponds to RF signal level - OL = overload.
- **Audio Meter**
  - Number of bars displayed corresponds to audio level.
  - OL = Illuminates when receiver audio limiter is active to prevent clipping
  - TxOL = Illuminates when transmitter input is overloaded. Reduce input from microphone or instrument to prevent clipping.
- **Gain Level**
  - Displays receiver gain setting in 1 dB increments.
- **Receiver Lock Status**
  - Lock icon and name of locked control:
    - menu
    - power
    - gain
- **Frequency Setting**
  - Selected frequency (MHz).
- **Encryption Status**
  - Illuminates when encryption is enabled.
- **Scan**
  - Displayed when scan function is active.
- **Network Scan**
  - Displayed when network scan function is active in multi-receiver systems.
- **Network Connection Indicator**
  - Displays additional Shure components are detected on the network.
- **TV Channel**
  - Displays network scan function is active in multi-receiver systems.
- **Transmitter Battery Icon**
  - Indicates remaining battery life.
- **Main Menu**
  - Press the menu button to access the menu. Each additional press of the menu button advances to the next menu screen in the following order:

Navigating the Receiver Menus

The receiver has a main menu for setup and configuration and an advanced menu to access additional receiver functions.

- **Scan**
  - Receiver automatically scans for the best available frequency
- **Network Scan**
  - Scans for frequencies for networked receivers operating in the same frequency band
- **Group**
  - Edit the receiver group settings
- **Channel**
  - Edit the receiver channel settings
- **Lock**
  - Choose a control lock option
- **Encryption**
  - Use the arrow buttons to enable encryption (on) or disable encryption (off)
- **Frequency**
  - Use the arrow buttons to edit the frequency value
Advanced Menu
Starting from the main menu home screen, press menu while holding the enter button to access the advanced menu. Each additional press of the menu button advances to the next menu screen in the following order.

1. Custom Groups
   Use to add channels and frequencies to Custom Groups

2. TV Channel Spacing
   Selects the regional bandwidth for TV channel display

3. Firmware Update
   Use to update the transmitter firmware

4. IP Settings
   Use to select and edit IP settings and subnet masks

5. Network Reset
   Returns network settings and IP address to default setting

6. Factory Reset
   Restores factory settings

   For application and configuration details, see the related guide topic for each advanced feature.

Tips for Editing Menu Parameters
• To increase, decrease or change a parameter, use the arrow buttons
• A menu setting will blink when editing is enabled
• To save a menu change, press enter
• To exit a menu without saving a change, press menu
• To access the advanced menu, press menu while holding the enter button from the home screen
• To return to the home screen from any menu without saving changes, press and hold the menu button.

Transmitters
1. Power LED
   - Green = unit is powered on
   - Red = low battery

2. On/Off Switch
   Powers the transmitter on or off.

3. Display:
   View menu screens and settings. Press any control button to activate the backlight.

4. IR window
   Align with the receiver IR window during an IR sync for automated transmitter programming.

5. Menu Navigation Buttons
   menu = Use to navigate between menu screens.
   ▼▲ = Use to select menu screens, edit menu parameters, or choose a home screen display option.
   enter = Press to confirm and save parameter changes.

   Tip: Press the menu button to exit without saving parameter changes.

6. Battery Compartment
   Requires 2 AA batteries or a Shure SB900 rechargeable battery.

7. AA Battery Adapter
   Secures batteries when powering transmitter with AA batteries instead of Shure SB900 battery.

8. Bodypack Antenna
   For RF signal transmission.

9. Handheld Integrated Antenna
   For RF signal transmission.

10. Microphone Cartridge
    See Optional Accessories for a list of compatible cartridges.

11. TA4M Input Jack
    Connects to a 4-Pin Mini Connector (TA4F) microphone or instrument cable.

12. Battery Contact Cover
    Align the cover as shown to prevent reflections from the battery contacts during broadcasts or performances.

Transmitter Display
1. Battery Indicator
   Bars displayed indicate remaining battery life.

2. Home Screen Display: Group and Channel/Frequency/SB900 Battery Runtime
   Use the arrow keys to select one of the following home screen displays:

   - Group and Frequency
   - SB900 battery runtime
   - Battery level

3. Encryption Status
   Icon displayed when encryption is enabled.

4. Lock
   Displayed when transmitter controls are locked.

5. RF Power
   RF power setting (Lo or Hi).

6. Mic Offset
   Displays mic offset level in 3 dB increments.

Transmitter controls
• To increase, decrease or change a parameter, use the ▼▲ buttons
• To save a menu change, press enter
• To exit a menu without saving a change, press the menu button
Transmitter Menu Options and Navigation

The transmitter features individual menu screens for setting up and adjusting the transmitter. To access the menu options from the home screen, press the menu button. Each additional press of the menu button advances to the next menu screen.

1 Home Screen
   - Use the arrow keys to select one of the following home screen displays:
     - Battery Icon/group and channel
     - Battery Icon/frequency
     - Battery Icon/Battery Runtime (SB900 installed)

2 group
   - Use the arrow buttons to scroll through the groups.

3 channel
   - Use the arrow buttons to scroll through the channels.

4 frequency
   - Use the arrow buttons to adjust the frequency. Press and hold for faster scrolling.

5 lock
   - Select a lock option:
     - On = controls locked
     - OFF = controls unlocked

6 rf power
   - Select an rf power setting:
     - Lo = 1 mW
     - Hi = 10 mW

7 mic offset dB
   - Use to match audio levels between two transmitters used in a combo system. Range is 0 to 21 dB (3 dB increments). Adjustments occur in realtime.

8 battery type
   - Use to set the battery type to match the installed AA battery type to ensure accurate battery metering. Menu is not displayed when Shure SB900 batteries are installed.

Tips for Editing Menu Parameters
- To access the menu options from the home screen, press the menu button. Each additional press of the menu button advances to the next menu screen.
- A menu parameter will blink when editing is enabled.
- To increase, decrease or change a parameter, use the arrow buttons.
- To save a menu change, press enter.
- To exit a menu without saving a change, press menu.

Battery Installation

1 Accessing the Battery Compartment
   - Press the side tabs on the bodypack or unscrew the cover on the handheld as shown to access the battery compartment.

2 Installing Batteries
   - AA Batteries: Place batteries (note polarity markings) and AA Adaptor as shown.
   - Shure SB900 Battery: Place battery as shown (note polarity markings), remove AA Adaptor from bodypack transmitter, stow AA Adaptor in door for handheld transmitter.

Note: If using AA batteries, set the battery type using the transmitter menu.

Setting the AA Battery Type
To ensure accurate display of transmitter runtime, set the battery type in the transmitter menu to match the installed AA battery type if a Shure SB900 rechargeable battery is installed, selecting a battery type is not necessary and the battery type menu will not be displayed.

1. Press the menu button to navigate to the battery icon.
2. Use the ▼▲ buttons to select the installed battery type:
   - AL = Alkaline
   - NiH = Nickel Metal Hydride
   - Li = Lithium Primary
3. Press enter to save.

AA Battery Installation
Fully insert the batteries as shown to ensure proper battery contact and to allow the door to latch securely.

Correct
Incorrect
Shure SB900 Rechargeable Battery

Shure SB900 lithium-ion batteries offer a rechargeable option for powering the QLX-D transmitters. Batteries quickly charge to 50% capacity in one hour and reach full charge within three hours. Single chargers and multiple bay chargers are available to recharge the Shure batteries.

Caution: Only charge Shure rechargeable batteries with a Shure battery charger.

Single Bay Charger

The single bay charger offers a compact charging solution.
1. Plug the charger into an AC power source or USB port.
2. Insert a battery into the charging bay.
3. Monitor the charging status LEDs until charging is complete.

Charging Status LED

<table>

<td>No battery in bay</td>
</tr>
</tbody>
</table>

Multiple Bay Chargers

Shure offers two models of multiple bay chargers:
- SBC-200 two bay charger
- SBC-800 eight bay charger

Multiple bay chargers can charge individual batteries or batteries installed in transmitters.

1. Plug the charger into an AC power source.
2. Insert batteries or transmitters into the charging bay.
3. Monitor the charging status LEDs until charging is complete.

Charging Status LED

Creating Audio Channels

A wireless audio channel is formed when a receiver and transmitter are tuned to the same frequency. To ease setup, frequencies available to the QLX-D system are organized into groups and channels. Each group contains a number of channels, and each channel is assigned to a specific preset frequency.

The QLX-D system provides 3 methods for tuning the receiver and transmitter to the same frequency:
- Scan and IR Sync: The receiver scans the RF spectrum for the best available frequency and an IR sync automatically tunes the transmitter to the receiver frequency
- Manual Group and Channel Assignment: Manually setting the receiver and transmitter to the same group and channel number forms an audio channel
- Manual Frequency Assignment: Manually setting the receiver and transmitter to the same frequency rather than using groups and channels forms an audio channel

Important: Before you begin a scan or frequency assignment:
- Turn off: All transmitters for system you are setting up to prevent interference with frequency scans.
- Turn on: The following potential sources of interference including other wireless systems, computers, CD players, large LED panels, and effects processors to prevent selection of occupied frequencies.

Scan and IR Sync

The simplest way to create an audio channel is to use the scan function to find the best available receiver channel, and then use the IR sync feature to automatically tune the transmitter to the receiver channel.

Step 1: Scanning to Find the Best Channel

The Scan function automatically selects the best available receiver channel.
1. Navigate to the Scan menu option.
2. Press enter to start the scan.
3. When the scan is complete, the channel will appear on the display.

Step 2: IR Sync for Automatic Transmitter Set Up

Performing an IR Sync automatically tunes the transmitter to match the receiver frequency, forming a wireless audio channel.
1. Turn on the transmitter.
2. Press the sync button on the receiver. The red IR LED will blink indicating that sync mode is active.
3. Align the IR sync windows of the transmitter and receiver at a distance of <15 cm (6 in.). When the transmitter and receiver are aligned, the red IR LED remains on and the sync will automatically occur.
4. Sync good appears on the display when IR sync is complete. The blue RF LED will illuminate indicating that the transmitter is within range of the receiver.

Note: If the IR sync fails, repeat the IR sync procedure, carefully maintaining alignment between the IR windows of the transmitter and receiver.

Manual Group and Channel Assignment

An audio channel can be manually created by simply setting the receiver and transmitter to the same group number and channel number. For example, a receiver set to Group 2, Channel 3 and a transmitter set to Group 2, Channel 3 would form an audio channel.

Use manual group and channel configuration to assign specific groups and channels to receivers and transmitters as an alternative method to automatically creating channels with IR sync.

Use the following steps to set the group and channel in the receiver and transmitter:
1. Navigate to the group setting.
2. Use the arrow buttons to scroll through the groups.
3. Press enter to select a group.
4. Next, use the arrow buttons to select a channel.
5. Press enter to save.
Manual Frequency Selection

Manual frequency selection can be used instead of groups and channels to set the transmitter and receiver to a specific frequency. For example, an audio channel can be created by setting the receiver and transmitter to same frequency.

Setting the Receiver Frequency

1. Press menu to navigate to the Frequency setting option.
2. Use the arrow buttons to adjust the frequency. Press and hold for faster scrolling.
3. Press enter to save.

Setting the Transmitter Frequency

1. Press menu to navigate to the Frequency setting option.
2. Use the arrow buttons to adjust the frequency. Press and hold for faster scrolling.
3. Press enter to save.

Receiver Gain Adjustment

The gain control sets the overall signal level for the system. The default gain level is 12 dB and the available gain range is -18 to 42 dB, in 1 dB increments.

Set the gain to a level where the audio LED appears green or yellow, with only the highest audio peaks causing the LED to occasionally turn red and engage the limiter. Reduce the gain if there is audible distortion of the audio.

From the receiver home screen, use the arrow buttons to increase or decrease the gain:
- A single button press adjusts the gain in 1 dB increments
- Press and hold the button for larger adjustments

Test the transmitter at performance levels when adjusting the gain. Monitor the audio meter and the audio LED to prevent overloads.

Control Lock Options for the Receiver and Transmitter

Control lock options are available for both the receiver and the transmitter to protect against accidental or unauthorized changes. Locks can be directly set from the component menu, or remotely set from WWB6. To maintain protection, controls remain locked when the transmitter is turned off and turned on.

Locking and Unlocking the Receiver Controls

The receiver has the following control lock options which can be used separately or in any combination:
- gain: locks the arrow buttons to prevent changes to the audio gain settings
- menu: prevents access to menu items and IR sync (gain controls and power switch remain active)
- power: disables power switch (gain and menu controls remain active)

To lock a receiver control:
1. Press the menu button to navigate to the lock settings.
2. Use the arrow buttons to add or remove the lock options shown next to the lock icon.
3. Press enter to save the lock settings.

To unlock the receiver:

Tip: To unlock the menu and clear all locks, press and hold the menu button while in the home screen until the unlock icon appears. Press enter to confirm and save changes.
1. To unlock gain or power settings, navigate to the lock settings by pressing the menu button.
2. Press the arrow buttons to de-select a lock option.
3. Press enter to confirm and save changes.

Locking and Unlocking Transmitter Controls

The transmitter controls can be locked or unlocked by selecting On (locked) or Off (unlocked) from the transmitter lock menu.

If an attempt is made to access a locked control, the lock icon will flash, indicating that the transmitter controls are locked.

To set a transmitter lock:
1. Press the menu button to navigate to the lock settings.
2. Use the arrow buttons to select on.
3. Press enter to save. The lock icon appears on the display to confirm that the control locks are enabled.

To unlock the transmitter:
1. Press and hold the menu button until Off and the unlock icon appear on the display.
2. Press enter to save changes.

Network Scan

The Network Scan feature automates frequency assignment by using a single receiver to scan and deploy frequencies to all networked receiver within the same frequency band.

Network Scanning and Frequency Deployment

1. Connect receivers to an active Ethernet network. All receivers must be on the same subnet.
2. Prior to performing a network scan, turn on all receivers and allow 60 seconds for all receivers to join the network.
3. Choose a group or custom group for deployment on the receiver that will be used to initiate the network scan.
4. To start a network scan, press the menu button and navigate to the network scan menu. Press enter.
5. When the scan is complete, the displays of receivers waiting for frequencies will flash.
6. Press enter to deploy the frequencies or press menu to cancel the deployment.
7. The front panel LEDs on each receiver will blink when a deployed frequency has been assigned.

Note: Full frequency deployment may not occur if the number of receivers in the network exceeds the number of available frequencies in the selected group. Try another group or rescan after turning off unused receivers.

</table>

Power
Make sure that the receiver and transmitter are receiving sufficient voltage. Check the battery indicators. Replace or recharge the batteries if necessary.

Gain
Adjust the system gain on the front of the receiver. Ensure the mic/line switch setting (XLR output only) on the back of the receiver corresponds to the input of the mixing console, amplifier, or processor.

Cables
Check that all cables and connectors are fully engaged or locked into position. Inspect cables for damage. Replace if necessary.

Interface Locks
The transmitter and the receiver can be locked to prevent accidental or unauthorized changes. If a locked control is accessed, the lock icon on the display will flash. Follow the instructions to unlock the receiver or transmitter.

Firmware Mismatch
Paired transmitters and receivers must have the same firmware version installed to ensure consistent operation. See Firmware Updates topic for firmware update procedure.

Encryption Mismatch
Indicates an encryption key mismatch has been detected. Perform an IR sync between the receiver and transmitter to clear the error.

Custom Group IR Sync
When using Custom Groups, always perform an IR sync from the Custom Groups menu in the receiver to ensure accurate display of group and channel information. See Custom Groups topic for additional details.

Radio Frequency (RF)
The blue RF LED will illuminate when a linked transmitter is within range of the receiver. Measure the transmitter range before a performance to avoid operating beyond the specified transmitter range.

The RF meter bars indicate amount of RF power being received. This signal could be from the transmitter, or it could be from an interfering source, such as a television broadcast. If the meter shows a signal level when the transmitter is off, then that channel may have interference. Check the surrounding area for sources of interference or change the receiver to a clear frequency.

A red RF LED indicates RF overload. Avoid operating multiple systems in close proximity.

Frequency Compatibility
- Perform a Scan and Sync to ensure the transmitter and receiver are set to the same channel or frequency
- Look at the label on the transmitter and receiver to make sure they are in the same band (G50, J50, L50, etc...).

Reducing Interference
- Perform a scan to find the best open frequency. Perform an IR sync to transfer the settings to the transmitter.
- For multiple systems, make sure that each receiver is assigned to a unique channel. Interference will occur if two transmitters are set to the same channel.
- Maintain a line of sight between transmitter and receiver antennas.
- Move receiver antennas away from metal objects or other sources of RF interference (such as CD players, computers, digital effects, network switches, network cables and Personal Stereo Monitor (PSM) wireless systems).
- Eliminate RF overload (see below).

Increasing Range
- Increase transmitter RF power level to HI
- Use an active directional antenna, antenna distribution system, or other antenna accessory to increase RF range

Eliminating RF Overload
If the RF OL icon appears on the RF meter, try the following:
- Reduce the transmitter RF power level from HI to Lo
- Move the transmitter further away from the receiver—at least 6 m (20 ft)
- If you are using active antennas, reduce antenna or amplifier gain.
- Use omnidirectional antennas

Error Codes and Solutions

<table>
<thead>
<tr>
<th>Error Code</th>
<th>Description</th>
<th>Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Err.001</td>
<td>Audio Compatibility</td>
<td>Update transmitter and receiver firmware to the latest version.</td>
</tr>
<tr>
<td>Err.002</td>
<td>Encryption Mismatch between Shure product lines</td>
<td>Set encryption to off for components from different Shure products lines, such as QLX-D and ULX-D.</td>
</tr>
<tr>
<td>Err.003</td>
<td>Encryption Mode Mismatch</td>
<td>Perform an IR sync between the transmitter and receiver to clear the error.</td>
</tr>
<tr>
<td>Err.004</td>
<td>Band Mismatch</td>
<td>Receiver and transmitter are operating in overlapping frequencies from different bands.</td>
</tr>
<tr>
<td>Err.005</td>
<td>Frequency Mismatch</td>
<td>Receiver and transmitter are from bands that do not share compatible frequencies.</td>
</tr>
<tr>
<td>Err.006</td>
<td>No Frequencies Found</td>
<td>Rescan, select a different group, or use WWB to find a frequency.</td>
</tr>
<tr>
<td>Err.007</td>
<td>Firmware Mismatch</td>
<td>Update firmware on the transmitter and receiver.</td>
</tr>
<tr>
<td>Err.008</td>
<td>Shure SB900 battery runtime does not appear on display</td>
<td>Check that battery is firmly installed into the battery compartment. If condition persists, replace the battery.</td>
</tr>
</tbody>
</table>
Specifications

RF Carrier Frequency Range
470–937.5 MHz, varies by region (See Frequency Range and Output Power table)

Working Range
100 m (328 ft)
Note: Actual range depends on RF signal absorption, reflection and interference.

RF Tuning Step Size
25 kHz, varies by region

Image Rejection
>-70 dB, typical

RF Sensitivity
-97 dBm at 10-5 BER

Latency
-2.9 ms

Audio Frequency Response
QLXD1 20 – 20 kHz (±1 dB)
QLXD2  Note: Dependent on microphone type

Audio Dynamic Range
System Gain @ +10
-120 dB, A-weighted, typical
Total Harmonic Distortion
-12 dBFS input, System Gain @ +10
-0.1%

System Audio Polarity
Positive pressure on microphone diaphragm produces positive voltage on pin 2 (with respect to pin 3 of XLR output) and the tip of the 6.35 mm (1/4-inch) output.

Operating Temperature Range
-18°C (0°F) to 50°C (122°F)
Note: Battery characteristics may limit this range.

Storage Temperature Range
-29°C (-20°F) to 74°C (165°F)
Note: Battery characteristics may limit this range.

QLXD4

Dimensions
41 mm x 197 mm x 151 mm (1.63 in. x 7.75 in. x 5.94 in.), H x W x D
Weight
777 g (1.71 lbs), without antennas
Housing
steel
Power Requirements
12 V DC @ 0.4 A, supplied by external power supply (tip positive)

RF Input
Spurious Rejection
>-80 dB, typical

Connector Type
BNC
Impedance
50 Ω

Audio Output
Gain Adjustment Range
-18 to +42 dB in 1 dB steps
Configuration
1/4" (6.35 mm) Impedance balanced (Tip=audio, Ring=no audio, Sleeve=ground)
XLR balanced (1=ground, 2=audio +, 3=audio −)

Impedance
1/4" (6.35 mm) 100 Ω (50 Ω Unbalanced)
XLR 100 Ω

Full Scale Output
1/4" (6.35 mm) +12 dBV
XLR LINE setting= +18 dBV, MIC setting= -12 dBV

Mic/Line Switch
30 dB pad
Phantom Power Protection
1/4" (6.35 mm) Yes
XLR Yes

Networking
Network Interface
Single Port Ethernet 10/100 Mbps
Network Addressing Capability
DHCP or Manual IP address
Maximum Cable Length
100 m (328 ft)

QLXD1
Mic Offset Range
0 to 21 dB (in 3 dB steps)
Battery Type
Shure SB900 Rechargeable Li-Ion or AA batteries 1.5 V
Dimensions
86 mm x 65 mm x 23 mm (3.38 in. x 2.57 in. x 0.92 in.) H x W x D, without antenna
Weight
138 g (4.9 oz.), without batteries
Housing
Cast aluminum

Audio Input
Connector
4-Pin male mini connector (TA4M), See drawing for details
Configuration
Unbalanced
Impedance
1 MΩ, See drawing for details
Maximum Input Level
8.5 dBV (7.5 Vpp)

Preamplifier Equivalent Input Noise (EIN)
System Gain Setting ≥ +20
-120 dBV, A-weighted, typical

RF Output
Connector
SMA
Antenna Type
Integrated Single Band Helical
Occupied Bandwidth
<200 kHz
Modulation Type
Shure proprietary digital
Power
1 mW or 10 mW
See Frequency Range and Output Power table, varies by region

QLXD2
Mic Offset Range
0 to 21 dB (in 3 dB steps)
Battery Type
Shure SB900 Rechargeable Li-Ion or AA batteries 1.5 V
Dimensions
269 mm x 51 mm (10.6 in. x 2.0 in.) L x Dia.
Weight
307 g (12.1 oz.), without batteries
Housing
Machined aluminum

Audio Input
Configuration
1/4" (6.35 mm) Impedance balanced (Tip=audio, Ring=no audio, Sleeve=ground)
XLR balanced (1=ground, 2=audio +, 3=audio −)

Impedance
1/4" (6.35 mm) 100 Ω (50 Ω Unbalanced)
XLR 100 Ω

<td>8:40 hours</td>
</tr>
</tbody>
</table>

The values in this table are typical of fresh, high quality batteries. Battery runtime varies depending on the manufacturer and age of the battery.

## Certifications

**QLXD1, QLXD2, QLXD4**

This product meets the Essential Requirements of all relevant European directives and is eligible for CE marking.

Industry Canada ICES-003 Compliance Label: CAN ICES-3 (B)/NMB-3(B)

**QLXD1, QLXD2**

Certified under FCC Part 74.

Certified by IC in Canada under RSS-102 and RSS-210.

FCC: DD4QLXD1G50, DD4QLXD1H50, DD4QLXD1J50, DD4QLXD1L50, DD4QLXD2G50, DD4QLXD2H50, DD4QLXD2J50, DD4QLXD2L50.

IC: 616A-QLXD1V50, 616A-QLXD2V50

FCC: DD4QLXD1V50, DD4QLXD2V50

Note: For transmitters operating in the V50 and V51 bands: nominal free space antenna gain at middle of the band is typically -6 dBi; and rolls off at the band edges an additional -4 dB.

**QLXD4**

Approved under the Declaration of Conformity (DoC) provision of FCC Part 15.

Conforms to electrical safety requirements based on IEC 60065.

The CE Declaration of Conformity can be obtained from: www.shure.com/europe/compliance

*NOTE:* This Radio equipment is intended for use in musical professional entertainment and similar applications. This Radio apparatus may be capable of operating on some frequencies not authorized in your region. Please contact your national authority to obtain information on authorized frequencies and RF power levels for wireless microphone products.

*REMARQUE:* Ce matériel radio est prévu pour une utilisation en spectacles musicaux professionnels et applications similaires. Il est possible que cet appareil radio soit capable de fonctionner sur certaines fréquences non autorisées localement. Se mettre en rapport avec les autorités compétentes pour obtenir les informations sur les fréquences et niveaux de puissance HF autorisés pour les systèmes de microphones sans fil.

*HINWEIS:* Diese Funkausrüstung ist zum Gebrauch bei professionellen Musikveranstaltungen und ähnlichen Anwendungen vorgesehen. Dieses Gerät kann möglicherweise auf einigen Funkfrequenzen arbeiten, die in Ihrem Gebiet nicht zugelassen sind. Wenden Sie sich bitte an die zuständige Behörde, um Informationen über zugelassene Frequenzen und erlaubte Sendeleistungen für drahtlose Mikrofonprodukte zu erhalten.

*NOTA:* Este equipo de radio está destinado para uso en presentaciones musicales profesionales y usos similares. Este aparato de radio puede ser capaz de funcionar en algunas frecuencias no autorizadas en su región. Por favor comuníquese con las autoridades nacionales para información sobre las frecuencias autorizadas y los niveles de potencia de radiofrecuencia para micrófonos inalámbricos.

*NOTA:* Questo apparecchio radio è concepito per l’intrattenimento musicale a livello professionale ed applicazioni simili. Questo apparecchio radio può essere in grado di funzionare a frequenze non autorizzate nel Paese in cui si trova l’utente. Rivolgetevi alle autorità competenti per ottenere le informazioni relative alle frequenze ed ai livelli di potenza RF autorizzati nella vostra regione per i prodotti radiomicrofonici.

*OPMERKING:* Deze radioapparatuur is bedoeld voor gebruik bij professionele muzikale amusementsproducties en soortgelijke toepassingen. Dit radioapparaat kan mogelijk werken op bepaalde frequenties die niet zijn toegestaan in uw regio. Raadpleeg de autoriteiten in uw land voor informatie over goedgekeurde frequenties en RF-vermogensniveaus voor draadloze microfoons.

*ПРИМЕЧАНИЕ.* Данная радиоаппаратура предназначена для использования в профессиональных музыкальных представлениях и аналогичных приложениях. Может оказаться, что эта радиоаппаратура в состоянии работать на некоторых частотах, не разрешенных в вашем регионе. За информацией о разрешенных частотах и уровнях РЧ мощности для беспроводных микрофонных систем обращайтесь в национальные органы власти.
