

The A/V WIRELESS RECEIVER, is intended for reception of video transmission. It modulates video signal to the standard out channel 3 or 4. And it can auto switch the input signals to TV, that is, when there is a AV signal coming into the AV terminal, it will auto switch to this terminal, otherwise, it will be at "antenna in" position.

The R-9000A sends the Sony Playstation Game's signal to the TV, when the game is on. And sends the antenna's signal to the TV when the game is off.
