Re: FCC ID: E2K24GBRL

Applicant:	Dell Computer Corporation
Correspondence Reference Number:	11679
731 Confirmation Number:	TC548020
Date of Original Email:	03/26/2004

Subject: audit

Answers to the FCC comments on the above referenced Application.

1) C2pc cover letter states:

For this submittal the INTEL PRO/Wireless 2200BG Network Connection (MN: WM3A2200BG) is not considered the EUT (Equipment Under Test). The EUT is the Dell notebook computer (MN: PP08L). Why does Internal Photos exhibit show only the card not laptop internal?

Refer to "Photographs - External". This shows where the INTEL PRO/Wireless 2200BG Network Connection is installed in the Dell notebook computer. This submittal is for the notebook computer with the INTEL PRO/Wireless 2200BG Network Connection installed, therefore only photographs were provided of the INTEL PRO/Wireless 2200BG Network Connection installed in the notebook computer. Detailed photographs of the notebook computer can be provided if required.

3) Exhibit with one-page CAD drawing seems to show antennas in keyboard section, such that bottom of laptop in contact test for lap-held position would be appropriate, yet SAR test seems to be done with back of display facing phantom - please explain, and/or re-test for lap-held if appropriate.

Refer to "Test Report - SAR". The antennas are indeed located in the base of the laptop. On pages 19 and 20 of the SAR Test Reports the photographs show and state that the DUT position being "Right hand side near LCD and Front right hand side near hinge". The photographs on pages 24, 26, 28, and 30 show where the hot spots of the antennas are and they are located in the base of the laptop.

4) In this and in future filings please include close-up photos of device at phantom, not only far-away photos showing whole test setup

In the future close-up photographs will be included in the test reports.
