ADMINISTRATIVE INFORMATION

DATE OF TEST: May 28 - June 17, 2003

DATE OF RECEIPT: May 28, 2003

PURPOSE OF TEST: To demonstrate the compliance of the Pass Thru System, LRP2000-26 with the requirements for FCC Part 15 Subpart C Sections 15.207, 15.209, 15.225 and RSS 210 devices.

TEST METHOD: ANSI C63.4 (1992) and RSS 212

MANUFACTURER: Escort Memory Systems
170 Technology Circle
Scotts Valley, CA 95066

REPRESENTATIVE: Russell Barber

TEST LOCATION: CKC Laboratories, Inc.
480 Los Viboras Road, Hollister, CA 95023
5473A Clouds Rest, Mariposa, CA 95338

SUMMARY OF RESULTS

As received, the Escort Memory Systems Pass Thru System, LRP2000-26 was found to be fully compliant with the following standards and specifications:

United States	Canada	
15.203	5.5	Antenna Requirements
NA	6.2.2(d)	Field Strength
15.207	6.6	AC Mains Conducted Emissions
15.209	6.2.1	General Field Strength Requirements (RSS 210 Table 3)
FCC 15.225	RSS 210	
15.225(a)	6.2.2(e)	Field Strength
15.225(b)	6.2.2(e)	Radiated Emissions
15.225(b)	6.2.2(e)	Bandedge Compliance
15.225(c)	6.2.2(e)	Frequency Tolerance
NA	6.2.2(e)	Emissions Mask
ANSI C63.4 (1992) method	RSS 212 method	
		Industry of Canada File No. IC 3171-D Industry of Canada File No. IC 3171-B Industry of Canada File No. IC 3082-B

CONDITIONS FOR COMPLIANCE

Note 1: Added Fair Rite ferrite P/N- 0443164151 to ethernet cable. Note 2: Shielded filtered power cord in use. Note 3: Ferrites added to both ends of DC power cord.

APPROVALS

QUALITY ASSURANCE:

Steve Behm, Director of Engineering Services and Quality Assurance

Joyce Walker, Quality Assurance Administrative Manager

Mike Wilkinson, Lab Manager

TEST PERSONNEL:

Randy Clark, EMC Engineer

Matthew Pettersen, EMC Test Engineer

Hosai Omarkhil, EMC Engineer

FCC 15.31(e) Voltage Variations

Antenna	FREQUENCY MHz	CORRECTED READING dBμV/m 85%	CORRECTED READING dBμV/m 100%	CORRECTED READING dBμV/m 115%	SPEC LIMIT dBμV/m
LRP-PT-ANT03	13.56	71.8	71.8	72.4	80.0
LRP-PT-ANT06	13.56	78.4	78.4	79.0	80.0

Test Method: ANSI C63.4 (1992)
Spec Limit: FCC Part 15 Subpart C Section 15.31(e)
Test Distance: 30 meters

FCC 15.31(m) Number Of Channels

This device operates on a single channel.

FCC 15.33(a) Frequency Ranges Tested

15.207 Conducted: 150 kHz – 30 MHz

15.209 Radiated: 30 MHz – 1 GHz

15.225 Radiated: 9 kHz – 30 MHz

FCC SECTION 15.35: ANALYZER BANDWIDTH SETTINGS PER FREQUENCY RANGE			
TEST	BEGINNING FREQUENCY	ENDING FREQUENCY	BANDWIDTH SETTING
CONDUCTED EMISSIONS	150 kHz	30 MHz	9 kHz
RADIATED EMISSIONS	9 kHz	150 kHz	200 Hz
RADIATED EMISSIONS	150 kHz	30 MHz	9 kHz
RADIATED EMISSIONS	30 MHz	1000 MHz	120 kHz

FCC 15.203 Antenna Requirements

This device must be professionally installed to comply with Section 15.203 of the FCC rules.

FCC 15.205 Restricted Bands

The fundamental operating frequency lies outside the restricted bands and therefore complies with the requirements of Section 15.205 of the FCC rules. Any spurious emission coming from the EUT was investigated to determine if any portion lies inside the restricted band. If any portion of a spurious emissions signal was found to be within a restricted band, investigation was performed to ensure compliance with Section 15.209.

Eut Operating Frequency

The EUT was operating at 13.56 MHz.

Temperature And Humidity During Testing

The temperature during testing was within +15°C and + 35°C.
The relative humidity was between 20% and 75%.

EQUIPMENT UNDER TEST (EUT) DESCRIPTION

The EUT tested by CKC Laboratories was a production unit.

EQUIPMENT UNDER TEST

The Pass Thru System, LRP2000-26 consists of:

FCC: Pending

Controller Box

Manuf: Escort Memory Systems
Model: LRP-PT-CTL20
Serial: 03D1879

Reader/Pass Thru Antenna

Manuf: Escort Memory Systems
Model: LRP-PT-ANT03
Serial: 03D1494

Power Supply

Manuf: Escort Memory Systems
Model: 00-1142
Serial: 03D1880

Reader/Pass Thru Antenna

Manuf: Escort Memory Systems
Model: LRP-PT-ANT06
Serial: 22N1697

PERIPHERAL DEVICES

The EUT was tested with the following peripheral device(s):

Laptop PC

Manuf: IBM
Model: Thinkpad 2645
Serial: Z9M8N100301TT326

RS422/RS232 Converter

Manuf: B&B Electronics
Model: 485COR
Serial: NA

REPORT OF MEASUREMENTS

The following tables report the worst case emissions levels recorded during the tests performed on the EUT. All readings taken were peak readings unless otherwise stated. The data sheets from which the emissions tables were compiled are contained in Appendix C.

Table 1: FCC 15.207 Six Highest Conducted Emission Levels

MEASUREMENT UNCERTAINTY

TEST	HIGHEST UNCERTAINTY
Radiated Emissions	+/- 2.94 dB
Conducted Emissions	+/- 1.56 dB

Note: Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k=2. Statements of compliance are based on the nominal values only.

EUT SETUP

The equipment under test (EUT) was set up in a manner that represented its normal use, as shown in the photographs in Appendix A. Any special conditions required for the EUT to operate normally are identified in the comments that accompany the emissions tables. The corrected data was then compared to the applicable emission limits to determine compliance.

The cables were routed consistent with the typical application by varying the configuration of the test sample. Interface cables were connected to the available I/O ports of the test unit. The effect of varying the position of the cables was investigated to find the configuration that produced maximum emissions. I/O cables were of the type and length specified in the individual requirements. The length of cable that produced maximum emissions was selected.

The radiated and conducted emissions data of the EUT was taken with the HP Spectrum Analyzer. Incorporating the applicable correction factors for distance, antenna, cable loss and amplifier gain, the data was reduced as shown in Table A.

Preliminary and final measurements were taken in order to ensure that all emissions from the EUT were found and maximized.

CORRECTION FACTORS

The basic spectrum analyzer reading was converted using correction factors as shown in the highest emissions readings in the tables. For radiated emissions in dB μ V/m, the spectrum analyzer reading in dB μ V was corrected by using the following formula in Table A. This reading was then compared to the applicable specification limit to determine compliance.

TABLE A: SAMPLE CALCULATIONS		
	Meter reading	(dB μ V)
+	Antenna Factor	(dB)
+	Cable Loss	(dB)
-	Distance Correction	(dB)
-	Preamplifier Gain	(dB)
=	Corrected Reading	(dB μ V/m)

TEST INSTRUMENTATION AND ANALYZER SETTINGS

The test instrumentation and equipment listed in Appendix B were used to collect both the radiated and conducted emissions data. For radiated measurements from 9 kHz to 30 MHz, the magnetic loop antenna was used. For frequencies from 30 to 1000 MHz, the biconilog antenna was used. Conducted emissions tests required the use of the FCC type LISNs.

The HP spectrum analyzer was used for all measurements. Table B shows the analyzer bandwidth settings that were used in designated frequency bands. For conducted emissions, an appropriate reference level and a vertical scale size of 10 dB per division were used. A 10 dB external attenuator was also used during conducted tests, with internal offset correction in the analyzer. During radiated testing, the measurements were made with 0 dB of attenuation, a reference level of 97 dBμV, and a vertical scale of 10 dB per division.

SPECTRUM ANALYZER DETECTOR FUNCTIONS

The notes that accompany the measurements contained in the Tables indicate the type of detector function used to obtain the given readings. Unless otherwise noted, all readings were made in the "Peak" mode. Whenever a "Quasi-Peak" or "Average" reading is listed as one of the six highest readings, this is indicated as a "Q" or an "A" in the appropriate table. The following paragraphs describe in more detail the detector functions and when they were used to obtain the emissions data.

Peak

In this mode, the Spectrum Analyzer or test engineer recorded all emissions at their peak value as the frequency band selected was scanned. By combining this function with another feature of the analyzer called "peak hold," the analyzer had the ability to measure transients or low duty cycle transient emission peak levels. In this mode the analyzer made a slow scan across the frequency band selected and measured the peak emission value found at each frequency across the band.

Quasi-Peak

When the true peak values exceeded or were within 2 dB of the specification limit, quasi-peak measurements were taken using the HP Quasi-Peak Adapter for the HP Spectrum Analyzer. The detailed procedure for making quasi peak measurements contained in the HP Quasi-Peak Adapter manual were followed.

Average

For certain frequencies, average measurements may be made using the spectrum analyzer. To make these measurements, the test engineer reduces the video bandwidth on the analyzer until the modulation of the signal is filtered out. At this point the analyzer is set into the linear mode and the scan time is reduced.

EUT TESTING

Mains Conducted Emissions

During conducted emissions testing, the EUT was located on a wooden table measuring approximately 80 cm high, 1 meter deep, and 1.5 meters in length. One wall of the room where the EUT was located has a minimum 2 meter by 2 meter conductive plane. The EUT was mounted on the wooden table 40 cm away from the conductive plane, and 80 cm from any other conductive surface.

The vertical metal plane used for conducted emissions was grounded to the earth. Power to the EUT was provided through a LISN. The LISN was grounded to the ground plane. All other objects were kept a minimum of 80 cm away from the EUT during the conducted test.

The LISNs used were 50 μ H/+50 ohms. Above 150 kHz, a 0.15 μ F series capacitor was added in-line prior to connecting the analyzer to restore the proper impedance for the range. A 30 to 50 second sweep time was used for automated measurements in the frequency bands of 150 kHz to 500 kHz, and 500 kHz to 30 MHz. All readings within 20 dB of the limit were recorded, and those within 6 dB of the limit were examined with additional measurements using a slower sweep time.

Radiated Emissions

The EUT was mounted on a nonconductive, rotating table 80 cm above the conductive grid. The nonconductive table dimensions were 1 meter by 1.5 meters.

During the preliminary radiated scan, the EUT was powered up and operating in its defined FCC test mode. For radiated measurements from 9 kHz to 30 MHz, the magnetic loop antenna was used. The frequency range of 30 MHz to 1000 MHz was scanned with the biconilog antenna located about 1.5 meter above the ground plane in the vertical polarity. During this scan, the turntable was rotated and all peaks at or near the limit were recorded. A scan of the FM band from 88 to 110 MHz was then made using a reduced resolution bandwidth and frequency span. The biconilog antenna was changed to the horizontal polarity and the above steps were repeated. Care was taken to ensure that no frequencies were missed within the FM and TV bands. An analysis was performed to determine if the signals that were at or near the limit were caused by an ambient transmission. If unable to determine by analysis, the equipment was powered down to make the final determination if the EUT was the source of the emission.

A thorough scan of all frequencies was made manually using a small frequency span, rotating the turntable as needed. The test engineer maximized the readings with respect to the table rotation, antenna height, and configuration of EUT. Maximizing of the EUT was achieved by monitoring the spectrum analyzer on a closed circuit television monitor.

APPENDIX C:
MEASUREMENT DATA SHEETS

Test Location: CKC Laboratories, Inc. • 480 Las Viboras Road, Site D • Hollister, CA 95023 • 831-637-8176

Customer: **Escort Memory Systems**
 Specification: **FCC 15.207 COND [AVE]**
 Work Order #: **80506**
 Test Type: **Conducted Emissions**
 Equipment: **Reader/Pass Thru Antenna**
 Manufacturer: Escort Memory Systems
 Model: LRP-PT-ANT03
 S/N: 03D1494

Date: 06/20/2003
 Time: 14:40:46
 Sequence#: 11
 Tested By: Randal Clark
 120V 60Hz

Equipment Under Test (* = EUT):

Function	Manufacturer	Model #	S/N
Controller Box	Escort Memory Systems	LRP-PT-CTL20	03D1879
Reader/Pass Thru Antenna*	Escort Memory Systems	LRP-PT-ANT03	03D1494
Power Supply	Escort Memory Systems	00-1142	03D1880

Support Devices:

Function	Manufacturer	Model #	S/N
Laptop PC	IBM	Thinkpad 2645	Z9M8N100301TT326
RS422/RS232 Converter	B&B Electronics	485COR	none

Test Conditions / Notes:

The loop antenna is placed at the center of the turntable. The transmitter and support equipment are placed behind the loop on top of the wooden table. Half High antenna loop coil area is 0.406m². Note 1: Standard Mode. Note 2: Added Fair Rite ferrite P/N- 0443164151 to ethernet cable. Note 3: Shielded filtered power cord in use. Note 4: Ferrites added to both ends of DC power cord. Conducted emissions 150kHz - 30MHz.

Transducer Legend:

Test Location: CKC Laboratories, Inc. • 480 Las Viboras Road, Site D • Hollister, CA 95023 • 831-637-8176

Customer: **Escort Memory Systems**
 Specification: **FCC 15.225(a) & (b) 30-meter**
 Work Order #: **80506**
 Test Type: **Radiated Scan**
 Equipment: **Reader/Pass Thru Antenna**
 Manufacturer: Escort Memory Systems
 Model: LRP-PT-ANT03
 S/N: 03D1494

Date: 06/06/2003
 Time: 11:24:18
 Sequence#: 16
 Tested By: Randal Clark

Equipment Under Test (* = EUT):

Function	Manufacturer	Model #	S/N
Controller Box	Escort Memory Systems	LRP-PT-CTL20	03D1879
Power Supply	Escort Memory Systems	00-1142	03D1880
Reader/Pass Thru Antenna*	Escort Memory Systems	LRP-PT-ANT03	03D1494

Support Devices:

Function	Manufacturer	Model #	S/N
Laptop PC	IBM	Thinkpad 2645	Z9M8N100301TT326
RS422/RS232 Converter	B&B Electronics	485COR	none

Test Conditions / Notes:

The loop antenna is placed at the center of the turntable. The transmitter and support equipment are placed behind the loop on top of the wooden table. Half High antenna loop coil area is 0.406m². The EUT loop coil antenna area is greater than 0.16m². Note 1: Standard Mode. Note 2: Added Fair Rite ferrite P/N- 0443164151 to ethernet cable. Note 3: Shielded filtered power cord in use. Note 4: Ferrites added to both ends of DC power cord. Fundamental & Spurious Measurements 9kHz - 30MHz.
