CERTIFICATE OF COMPLIANCE

EVEREX Systems, Inc.
5020 Brandin Court
Fremont, CA 94538
Attention: Henry Chan

Dates of Tests: July 01-02, 1998
Test Report S/ N: B2.980629452.E3E
Test Site: PCTEST Lab, Columbia MD
Job No.: HC#8011

FCC ID

E3EEX-2E000-000H

APPLICANT

EVEREX SYSTEMS, INC.

Rule Part(s):	FCC Part 15 Subpart B
Classification:	Class B Personal Computer (JBC)
Equipment EUT Type:	Pentium II PCI/ISA Bus ATX Mid-Tower PC
CPU / Frequencies:	Intel® Pentium® II 266/233 MHz
Trade Name / Model:	Everex EX-2E000-000H

This equipment has been shown to be capable of compliance with the applicable technical standards as indicated in the measurement report and was tested in accordance with the measurement procedures specified is ANSI C63.4-1992 (Note Codes: #37)

I attest to the accuracy of data. All measurements reported herein were performed by me or were made under my supervision and are correct to the best of my knowledge and belief. I assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

PCTEST certifies that no party to this application has been denied the FCC benefits pursuant to Section 5301 of the Anti-Drug Abuse Act of 1988, 21 U.S.C. 853(a)

Randy Ortanez
President & Chief Engineer

MEASUREMENT REPORT

Scope - Measurement and determination of electromagnetic emissions (EME) of radio frequency devices including intentional and/or unintentional radiators for compliance with the technical rules and regulations of the Federal Communications Commission.

Company Name:	EVEREX SYSTEMS, INC.
Address:	5020 Brandin Court Fremont, CA 94538
Attention:	Henry Chan – Manager, Compliance Group

- FCC ID: **E3EEX-2E000-000H**
- Class: B Digital Device / Personal Computer (JBC)
- EUT Type: Pentium II PCI/ISA ATX Mid-Tower PC
- Class II Change: Alternate Power Supply (ENHANCE 230W Model: ATX-723B)
- Original Grant Date: August 15, 1997
- CPU / Frequencies: Intel® Pentium® II – 266MHz or 233 MHz
- CPU Oscillator(s): 14.3 MHz Clock Generator
- Trade Name/Model: **Everex EX-2E000-000H**
- Power Cord: Unshielded
- Cable(s): Shielded
- Rule Part(s): FCC Part 15 Subpart B
- Test Procedure(s): ANSI C63.4 (1992)
- Dates of Tests: July 01-02, 1998
- Place of Tests: PCTEST Lab, Columbia, MD U.S.A.
- Test Report S/N: B2.980629452.E3E
- Job No.: HC#8011

NOTE: This is a Class II Permissive Change testing to determine continued compliance of the subject device with the use of an alternate power supply (ENHANCE 230W Model: ATX-723B).

NVLAP[®]
Lab Code 100431-0

1.1 INTRODUCTION

The measurement procedure described in American National Standard for Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9kHz to 40GHz (ANSI C63.4-1992) was used in determining radiated and conducted emissions emanating from **EVEREX Systems, Inc. Pentium II PCI/ISA Bus ATX Mid-Tower Computer FCC ID: E3EEX-2E000-000H** with the Class II Permissive change(s) described herein.

These measurement tests were conducted at **PCTEST Engineering Laboratory, Inc.** facility in New Concept Business Park, Guilford Industrial Park, Columbia, Maryland. The site address is 6660-B Dobbin Road, Columbia, MD 21045. The test site is one of the highest points in the Columbia area with an elevation of 390 feet above mean sea level. The site coordinates are 39° 11'15" N latitude and 76° 49'38" W longitude. The facility is 1.5 miles North of the FCC laboratory, and the ambient signal and ambient signal strength are approximately equal to those of the FCC laboratory. There are no FM or TV transmitters within 15 miles of the site. The detailed description of the measurement facility was found to be in compliance with the requirements of § 2.948 according to ANSI C63.4 on October 19, 1992.

1.2 PCTEST Location

The map at right shows the location of the PCTEST Lab, its proximity to the FCC Lab, the Columbia vicinity area, the Baltimore-Washington International (BWI) airport, and the city of Baltimore, and the Washington, D.C. area. (see Figure1).

Figure 1. Map of the Greater Baltimore and Metropolitan Washington, D.C. area.

2.1 Product Information

2.2 Equipment Description

The Equipment Under Test (EUT) is the **EVEREX Systems, Inc. FCC ID: E3EEX-2E000-000H Pentium II PCI/ISA Bus ATX Mid-Tower Computer with the Class II Permissive Change(s) of an alternate Power Supply (ENHANCE 230W Model: ATX-723B)**. The EUT is identical to the previously certified computer except for the change(s) described.

Microprocessor(s):	Intel® Pentium® II (MMX™)
Processor Clock Speed(s):	266MHz or 233MHz
CPU Crystal/Oscillators(s):	14.3 MHz (into IC Clock Generator)
Chipset(s):	Intel® i440TX Intel® PCIsset: FW82439TX, FW82371AB SMC Super I/O Controller: FDC37C669QF P
Port/Connector(s):	External: PS/2 Keyboard, PS/2 Mouse, USB1, USB2, LPT1, COM1, COM2 Internal: FDD, IDE-1, IDE-2, IR, ATX Power, Front Panel header connectors
Chassis:	Mid-Tower Case (MINMAW Model: F610)
Drive(s):	(1) 3.5" 1.44 MB FDD; (1) 1 GB HDD
New Power Supply:	ENHANCE 230W Model: ATX-723B
Original Power Supply:	SPARKLE 235W P/S Model: FSP235-60GT
	or: SPARKLE 235W P/S Model: SPI-235HA
Power Cord:	<i>Unshielded</i>
Cable(s):	<i>Shielded</i>

2.4 EMI Suppression Device(s)

EMI suppression device(s) installed in production:

- see schematics (Appendix B)

EMI suppression device(s) added and/or modified during testing:

- none

3.1 Description of Tests

3.2 Conducted Emissions

Figure 2. Shielded Enclosure
Line-Conducted Test Facility

Figure 3. Line Conducted
Emission Test Set-Up

Figure 4. Wooden Table &
Bonded LISNs

Figure 5. LISN Schematic
Diagram

The line-conducted facility is located inside a 16'x20'x10' shielded enclosure. It is manufactured by Ray Proof Series 81 (see Figure 2). The shielding effectiveness of the shielded room is in accordance with MIL-Std-285 or NSA 65-6. A 1m. x 1.5m. wooden table 80cm. high is placed 40cm. away from the vertical wall and 1.5m away from the side wall of the shielded room (see Figure 3). Solar Electronics and EMCO Model 3725/2 (10kHz-30MHz) 50Ω/50μH Line-Impedance Stabilization Networks (LISNs) are bonded to the shielded room (see Figure 4). The EUT is powered from the Solar LISN and the support equipment is powered from the EMCO LISN. Power to the LISNs are filtered by a high-current high-insertion loss Ray Proof power line filters (100dB 14kHz-10GHz). The purpose of the filter is to attenuate ambient signal interference and this filter is also bonded to the shielded enclosure. All electrical cables are shielded by braided tinned copper zipper tubing with inner diameter of 1/2". If the EUT is a DC-powered device, power will be derived from the source power supply it normally will be powered from and this supply lines will be connected to the Solar LISN. LISN schematic diagram is shown in Figure 5. All interconnecting cables more than 1 meter were shortened by non-inductive bundling (serpentine fashion) to a 1-meter length. Sufficient time for the EUT, support equipment, and test equipment was allowed in order for them to warm up to their normal operating condition. The RF output of the LISN was connected to the spectrum analyzer to determine the frequency producing the maximum EME from the EUT. The spectrum was scanned from 450kHz to 30MHz with 20 msec. sweep time. The frequency producing the maximum level was reexamined using EMI/ Field Intensity Meter and Quasi-Peak adapter. The detector function was set to CISPR quasi-peak mode. The bandwidth of the receiver was set to 10 kHz. The EUT, support equipment, and interconnecting cables were arranged and manipulated to maximize each EME emission. Each emission was maximized by: switching power lines; varying the mode of operation or resolution; clock or data exchange speed; scrolling H pattern to the EUT and/or support equipment, and powering the monitor from the floor mounted outlet box and the computer aux AC outlet, if applicable; whichever determined the worst-case emission. Photographs of the worst-case emission can be seen in Appendix C. Each EME reported was calibrated using the HP8640B signal generator.

3.1 Description of Tests (continued)

3.3 Radiated Emissions

Figure 6. 3-Meter Test Site

Figure 7. Dimensions of Outdoor Test Site

Figure 8. Turntable and System Setup

Figure 9. Normalized Site Attenuation Curves (H&V)

Preliminary measurements were made indoors at 1 meter using broadband antennas, broadband amplifier, and spectrum analyzer to determine the frequency producing the maximum EME. Appropriate precaution was taken to ensure that all EME from the EUT were maximized and investigated. The system configuration, clock speed, mode of operation or video resolution, turntable azimuth with respect to the antenna were noted for each frequency found. The spectrum was scanned from 30 to 200 MHz using biconical antenna and from 200 to 1000 MHz using log-spiral antenna. Above 1 GHz, linearly polarized double ridge horn antennas were used.

Final measurements were made outdoors at 3-meter test range using Roberts™ Dipole antennas or horn antenna (see Figure 6). The test equipment was placed on a wooden and plastic bench situated on a 1.5 x 2 meter area adjacent to the measurement area (see Figure 7). Sufficient time for the EUT, support equipment, and test equipment was allowed in order for them to warm up to their normal operating condition. Each frequency found during pre-scan measurements was re-examined and investigated using EMI/Field Intensity Meter and Quasi-Peak Adapter. The detector function was set to CISPR quasi-peak mode and the bandwidth of the receiver was set to 100kHz or 1 MHz depending on the frequency or type of signal.

The half-wave dipole antenna was tuned to the frequency found during preliminary radiated measurements. The EUT, support equipment and interconnecting cables were re-configured to the set-up producing the maximum emission for the frequency and were placed on top of a 0.8-meter high non-metallic 1 x 1.5 meter table (see Figure 8). The EUT, support equipment, and interconnecting cables were re-arranged and manipulated to maximize each EME emission. The turntable containing the system was rotated; the antenna height was varied 1 to 4 meters and stopped at the azimuth or height producing the maximum emission. Each emission was maximized by: varying the mode of operation or resolution; clock or data exchange speed; scrolling H pattern to the EUT and/or support equipment, and powering the monitor from the floor mounted outlet box and the computer aux AC outlet, if applicable; and changing the polarity of the antenna, whichever determined the worst-case emission. Photographs of the worst-case emission can be seen in Appendix C. Each EME reported was calibrated using the HP8640B signal generator. The Theoretical Normalized Site Attenuation Curves for both horizontal and vertical polarization are shown in Figure 9.

4.1 Support Equipment Used

1. EVEREX Mid-Tower PC (EUT) EVEREX PCI Video Card	FCC ID: E3EEX-2E000-000H 1.8 m. unshielded power cord (2) 1.0 m. shielded USB cables (unterminated) FCC ID: E3EEV-VGA-T64	S/N: Pre-production
2. NEC Monitor	FCC ID: A3DJC-1537VMA 1.8 m. unshielded AC power cord 1.0 m. shielded cable	S/N: AZ002
3. HP Printer	FCC ID: BS46XU2225C 1.8 m. unshielded AC adapter cord 1.0 m. shielded data cable	S/N: 26055S40027
4. CHIC TECH Mouse	FCC ID: IOWCM-100 1.5 m. shielded cable	S/N: 5003066
5. NEC Keyboard	FCC ID: AQ6-MTN4XZ15 1.6 m. shielded coiled cable	S/N: 52040470
6. EVEREX Modem (2)	FCC ID: E3E5UVEV-945 1.8 m. unshielded AC power adapter cords 1.0 m. shielded cables	S/N: PCT371,PCT372

(See "Test Set-Up Photographs" Attachment E for actual system setup.)

5.1 LINE-CONDUCTED TEST DATA

5.2 Conducted Emissions

(See Data Under Plots – Attachment D)

NOTES:

1. All modes of operation & CPU speeds were investigated and the worst-case emissions are reported.
2. Other CPU speeds were scanned, tested and found to be in compliance SeePlots.
3. The limit for Class B device is $250\mu\text{V}$ from 450kHz to 30MHz.
4. Line A = Phase; Line B = Neutral
5. Deviations to the Specifications: None.

* All readings are calibrated by HP8640B signal generator with accuracy traceable to the National Institute of Standards and Technology (formerly NBS).

** Measurements using CISPR quasi-peak mode.

6.1 RADIATED TEST DATA

6.3.1 Radiated Emissions

FREQ. (MHz)	Level* (dBm)	AFCL** (dB)	POL (H/V)	Height (m)	Azimuth (° angle)	F/S (μ V/m)	Margin*** (dB)
120.4	- 79.4	11.5	H	2.4	55	90.5	- 4.4
133.6	- 82.8	12.5	H	2.4	70	68.3	- 6.8
312.0	- 86.0	21.0	H	1.6	290	126.0	- 4.0
333.0	- 87.1	21.7	V	1.4	195	120.5	- 4.4
433.2	- 90.0	24.5	V	1.3	180	118.8	- 4.5
466.8	- 90.5	25.3	V	1.3	170	123.1	- 4.2
564.8	- 92.1	27.4	V	1.2	180	130.7	- 3.7

Table 1. Radiated Measurements at 3-meters.
Pentium II 266 MHz

NOTES:

1. All CPU speeds and modes of operation were investigated and the worst-case emissions are reported.
2. The radiated limits are shown on Figure 10. Above 1GHz the limit is 500 μ V/m.

Figure 10. Limits at 3 meters

* All readings are calibrated by HP8640B signal generator with accuracy traceable to the National Institute of Standards and Technology (formerly NBS).

** AFCL = Antenna Factor (Roberts dipole) and Cable Loss (30 ft. RG58C/U).

*** Measurements using CISPR quasi-peak mode. Above 1GHz, peak detector function mode is used using a resolution bandwidth of 1MHz and a video bandwidth of 1MHz. The peak level complies with the average limit. Peak mode is used with linearly polarized horn antenna and low-loss microwave cable.

7.1 Sample Calculations

$$\text{dB}\mu\text{V} = 20 \log_{10} (\mu\text{V}/\text{m})$$
$$\text{dB}\mu\text{V} = \text{dBm} + 107$$

7.2 Example 1:

@ 20.3 MHz

Class B limit	= 250 μV = 47.96 dB μV
Reading	= - 67.8 dBm (calibrated level)
Convert to dB μV	= - 67.8 + 107 = 39.2 dB μV
$10^{(39.2/20)}$	= 91.2 μV
Margin	= 39.2 - 47.96 = - 8.76
	= 8.8 dB below limit

7.3 Example 2:

@ 66.7 MHz

Class B limit	= 100 $\mu\text{V}/\text{m}$ = 47.96 dB $\mu\text{V}/\text{m}$
Reading	= - 76.0 dBm (calibrated level)
Convert to dB $\mu\text{V}/\text{m}$	= - 76.0 + 107 = 31.0 dB $\mu\text{V}/\text{m}$
Antenna Factor + Cable Loss	= 5.8 dB
Total	= 36.8 dB $\mu\text{V}/\text{m}$
Margin	= 36.8 - 40.0 = - 3.2
	= 3.2 dB below limit

8.1 Accuracy of Measurement

8.2 Measurement Uncertainty Calculations:

The measurement uncertainties stated were calculated in accordance with the requirements of NIST Technical Note 1297 and NIS 81 (1994).

Contribution (Line Conducted)	Probability Distribution	Uncertainty ($\pm$ dB)	
		9kHz-150MHz	150-30MHz
Receiver specification	Rectangular	1.5	1.5
LISN coupling specification	Rectangular	1.5	1.5
Cable and input attenuator calibration	Normal (k=2)	0.3	0.5
Mismatch: Receiver VRC $\Gamma_1 = 0.03$ LISN VRC $\Gamma_R = 0.8$ (9kHz) 0.2 (30MHz) Uncertainty limits $20\log(1 \pm \Gamma_1 \Gamma_R)$	U-Shaped	0.2	0.35
System repeatability	Std. deviation	0.2	0.05
Repeatability of EUT		-	-
Combined standard uncertainty	Normal	1.26	1.30
Expanded uncertainty	Normal (k=2)	2.5	2.6

Calculations for 150kHz to 30MHz:

$$u_c(y) = \sqrt{\sum_{i=1}^m u_i^2(y)} = \pm \sqrt{\frac{1.5^2 + 1.5^2}{3} + \left(\frac{0.5}{2}\right)^2 + 0.35} = \pm 1.298\text{dB}$$

$$U = 2U_c(y) = \pm 2.6\text{dB}$$

Contribution (Radiated Emissions)	Probability Distribution	Uncertainties ($\pm$ dB)	
		3 m	10 m
Ambient Signals		-	-
Antenna factor calibration	Normal (k=2)	± 1.0	± 1.0
Cable loss calibration	Normal (k=2)	± 0.5	± 0.5
Receiver specification	Rectangular	± 1.5	± 1.5
Antenna directivity	Rectangular	+ 0.5 / - 0	+ 0.5
Antenna factor variation with height	Rectangular	± 2.0	± 0.5
Antenna phase centre variation	Rectangular	0.0	± 0.2
Antenna factor frequency interpolation	Rectangular	± 0.25	± 0.25
Measurement distance variation	Rectangular	± 0.6	± 0.4
Site imperfections	Rectangular	± 2.0	± 2.0
Mismatch: Receiver VRC $\Gamma_1 = 0.2$ Antenna VRC $\Gamma_R = 0.67$ (Bi) 0.3 (Lp) Uncertainty limits $20\log(1 \pm \Gamma_1 \Gamma_R)$	U-Shaped	+ 1.1 - 1.25	± 0.5
System repeatability	Std. Deviation	± 0.5	± 0.5
Repeatability of EUT		-	-
Combined standard uncertainty	Normal	+ 2.19 / - 2.21	+ 1.74 / - 1.72
Expanded uncertainty U	Normal (k=2)	+ 4.38 / - 4.42	+ 3.48 / - 3.44

Calculations for 3m biconical antenna. Coverage factor of k=2 will ensure that the level of confidence will be approximately 95%, therefore:

$$U = 2u_c(y) = 2 \times \pm 2.19 = \pm 4.38\text{dB}$$

```

NOTE: This is a sample of the basic program used during the test. However, during testing a different software program may be used; whichever determines the worst-case condition. In addition, the program used also depends on the number and type of devices being tested.

11.1 Recommendation/Conclusion

The data collected shows that the **EVEREX Systems, Inc. Pentium II PCI/ISA Bus ATX Mid-Tower Computer FCC ID: E3EEX-2E000-000H, with the Class II Permissive Change(s) described (use of alternate Power Supply)**, complies with 15.107 and 15.109 of the FCC Rules. The highest emission observed with a minimum margin to the specifications was at 1.781 MHz for conducted emissions with a margin of 12.61dB below the limits; at 564.8 MHz for radiated emissions with a level of 3.7dB.
