SECTION 4: Operation of E.U.T. during testing

4.1 Operating Modes

The EUT exercise program used during radiated and conducted testing was designed to exercise the various system components in a manner similar to typical use.

The sequence is used: Communication(Transmitting) mode

To Access the data of tags, the user transmits the instruction from the host device to
The controller in the form of the command frame. According to the contents of the
Received frame, the controller communicates with tags through the antenna.

Justification : The system was configured in typical fashion (as a customer would normally use it) for testing.

4.2 Configuration and peripherals

*Cabling was taken into consideration and test data was taken under worse case conditions.

This EUT provides stable voltage constantly to RF Module regardless of input voltage. Therefore, this EUT complies with the requirement.

FCC Part 15.203 Antenna requirement

Since type of Equipment uses a transmitting antenna that is an integral part of the equipment. it is impossible for end Users to replace the antenna without use of a special tool.
Therefore the equipment complies with the requirement of 15.203.

UL Apex hereby confirms that E.U.T. , in the configuration tested, complies with the specifications FCC Part15 Subpart C.

Remarks : The EUT was separately tested in accordance with FCC Part 15 Subpart B and Declaration of Conformity was applied.

SECTION 6: Conducted emission

6.1 Test Procedure

EUT was placed on a platform of nominal size, 1m by 1.5m, raised 80cm above the conducting ground plane. The rear of tabletop was located 40cm to the vertical conducting plane. The rear of EUT, including peripherals aligned and flushed with rear of tabletop. All other surfaces of tabletop were at least 80cm from any other grounded conducting surface. EUT was located 80cm from LISN and excess AC cable was bundled in center. They were folded back and forth forming a bundle 30cm to 40cm long and were hanged at a 40cm height to the ground plane. Each EUT current-carrying power lead, except the ground (safety) lead, was individually connected through a LISN to the input power source. All unused 50ohm connectors of the LISN were resistively terminated in 50ohm when not connected to the measuring equipment.

The AC Mains Terminal Continuous disturbance Voltage has been measured with the EUT on a reference ground plane

4.0 x 4.0m in a No.2 semi Anechoic Chamber.

The EUT was connected to a Line Impedance Stabilization Network (LISN).

An overview sweep with peak detection has been performed.

The measurements have been performed with a CISPR quasi-peak detector (IF BW 9 kHz).

Measurement range: 0.15-30MHz

SECTION 7: Radiated emission

7.2 Test procedure

EUT was placed on a platform of nominal size, 1m by 1.5m, raised 80cm above the conducting ground plane.

The rear of EUT, including peripherals was aligned and flush with rear of tabletop. I/O cables that were connected to the peripherals were bundled in center. They were folded back and forth forming a bundle 30cm to 40cm long and were hanged 40cm height to the ground plane. Test was made with the antenna positioned in both the horizontal and vertical planes of polarization. The measurement antenna was varied in height above the conducting ground plane to obtain the maximum signal strength.

The Radiated Electric Field Strength intensity has been measured in No1(19.2x11.2x7.7m) and No.2(7.5x5.8x5.2m) semi anechoic chamber

With a ground plane and at a distance of 3m(30MHz - 1000MHz) and 10m(9kHz - 30MHz).

The measuring antenna height was varied between 1 to 4m and EUT was rotated a full revolution in order to obtain the maximum value of the electric field intensity.

The measurements were performed for both vertical and horizontal antenna polarization.

The EUT was put into operation at Transmitting mode.

Measurement range : 9kHz-1000MHz

Measurement detector : IF BW 200Hz(9kHz-90kHz, 110kHz-490Hz), AV
: IF BW 9kHz(90kHz-110kHz, 490kHz-30MHz), QP
: IF BW 120kHz(30MHz-1000MHz), QP
