

FCC 2.1051/2.1053/PART 24- BAND EDGE

Test Conditions: EUT is a dual band remote radio head with multichannel capability and may otherwise be classified as a repeater/extender. EUT operates on 869-894 MHz and 1930-1990 MHz. Support equipment is used to convert RF from signal generator to fiber for input to the EUT. Power output is monitored using customer support equipment. EUT does not demodulate the input signal. Frequency Range Investigated: 30MHz - 20GHz. Temperature: 28°C, Relative Humidity: 53%.

Test Conditions / Notes:

EUT is a dual band remote radio head with multichannel capability and may otherwise be classified as a repeater/extender. EUT operates on 869-894 MHz and 1930-1990 MHz. Support equipment is used to convert RF from signal generator to fiber for input to the EUT. Power output is monitored using customer support equipment. EUT does not demodulate the input signal. Temperature: 28°C, Relative Humidity: 53%. Intermodulation test setup: The output of each of the support signal generators are connected to a preamp. The output of each preamp is connected to the combiner which feeds the RF to fiber module. The RF output of the EUT is fed through suitable attenuation and directional coupler to a monitoring power sensor. Input to the measuring receiver is fed via the directional coupler. Insertion loss at the indicated frequency is included as an amplitude offset. EUT Power output is set such that the following aggregate output power is measured: 1900MHz PCS, GSM: 1.00 W, EDGE: 1.00W, NADC: 1.00 W, CDMA: 0.75W, WCDMA: 1.00W. Tabular data is provided for WCDMA and CDMA formats.

FCC PART 24 – INPUT PLOTS

Test Conditions: EUT is a dual band remote radio head with multichannel capability and may otherwise be classified as a repeater/extender. EUT operates on 869-894 MHz and 1930-1990 MHz. The RF output of the support equipment prior to the RF to fiber module (at the output of the support preamp) is routed to the measurement receiver for comparison to the output of the RF output of the EUT.
