

FCC ID: E9MMP40II

EMISSION - TESTREPORT

Testreport file no. : **T23834-00-00KJ** Date : October 30, 2003
of issue

Model : Wireless Microphone / Micropen Transmitter

Type : MP40

Applicant : AKG Acoustics , U.S.

Manufacturer : Vtech Communications Ltd / AKG Acoustics

Licence holder : AKG Acoustics, U.S.

Address : 914 Airpark Center Drive, Nashville TN 37217

United States of America

Test result accrdg. to the
regulation(s) at page 3 :

POSITIVE

This testreport with appendix consists of **84** pages.
The testresult only responds to the tested sample. It is not allowed to copy
this report even partly without the allowance of the testlaboratory.

Power supply system : Internal battery DC 1.5 V

STATEMENT OF MEASUREMENT UNCERTAINTY

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities that can account for a nominal measurement error of $\pm 4\text{dB}$. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

SHORT DESCRIPTION OF THE EQUIPMENT UNDER TEST (EUT)

The MP40 micropen is a miniature transmitter with a detachable C 407 omnidirectional condenser microphone. The transmitter has been specifically designed for speech reinforcement use in conjunction with WMS 40 Series receivers from AKG.
The MP40 micropen operates on a single fixed, quartz stabilized carrier frequency.

Number of received/tested samples: **3 / 3**

DEFINITIONS FOR SYMBOLS USED IN THIS TEST REPORT

- - Black box indicates that the listed condition, standard or equipment is applicable for this Report.
- o - Blank box indicates that the listed condition, standard or equipment was not applicable for this Report.

MEASUREMENT PROTOCOL FOR FCC, VCCI AND AUSTEL

Test Methodology

Conducted and radiated emission testing is performed according to the procedures in International Special Committee on Radio Interference (CISPR) Publication 22 (1993), European Standard EN 55022 and Australian Standard AS 3548 (which are based on CISPR 22).

The Japanese standard, "Voluntary Control Council for Interference (VCCI) by Data Processing Equipment and Electronic Office Machines, Technical Requirements" is technically equivalent to CISPR 22 (1993). For official compliance, a conformance report must be sent to and accepted by the VCCI.

In compliance with FCC Docket 92-152, "Harmonization of Rules for Digital Devices Incorporate International Standards", testing for FCC compliance may be done following the ANSI C63.4-1992 procedures and using the FCC limits or the CISPR 22 Limits.

Measurement Error

The test system for conducted emissions is defined as the LISN, tuned receiver and coaxial cable. The test system for spurious emissions is defined as the antenna, the pre-amplifier, the tuned receiver and the coaxial cable. These test systems have an expected error of ± 3 dB. The equipment comprising the test systems are calibrated on an annual basis.

Justification

The Equipment Under Test (EUT) is configured in a typical user arrangement in accordance with the manufacturer's instructions. A cable is connected to each available port and either terminated with a peripheral into its characteristic impedance or left unterminated. When appropriate, the cables are manually manipulated with respect to each other to obtain maximum emissions from the unit.

General Standard Information

The test methods used comply with CISPR Publication 22 (1993), EN 55022 (1987) and AS 3548 (1992) - "Limits and Methods of Measurement of Radio Interference Characteristics of Information Technology Equipment" and with ANSI C63.4-1992 - "Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz."

For detailed description of each measurement please refer to section testresults.

DISCOVERY OF WORST CASE MEASUREMENT CONDITION:

The model MP40 consists of 10 different versions US54, US54B, US58, US58B, KR3, US60A, KR4, US60B, EU62 and EU62B.

For the exact frequency range of this models please refer to the frequency plan in the technical documentation set.

All the 10 versions are technically identical except the following items:

- PCB. The boards are similar with differences only in the output filter. On the PCB, the values of some resistors, coils and capacitors are different. For more detailed information, please see technical documentation set. Due to the different output filter, the PCB's have different names.

To find out the worst case channel for the complete measurement the following tests have been performed:

The complete measurement was performed on 3 versions:

- US54 working on 710.400 MHz (lowest channel of the frequency band)
- US60B working on 751.550 MHz (middle channel of the frequency band)
- EU62B working on 805.100 MHz (highest channel of the frequency band)

TEST RESULT**CONDUCTED EMISSIONS - 10/150 kHz - 30 MHz**

Description of Measurement

The final level, expressed in dB μ V, is arrived at by taking the reading directly from the EMI receiver. This level is compared directly to the FCC Limit or to the CISPR limit, which is equivalent to the Australian AS 3548 limit.

To convert between dB μ V and μ V, the following conversions apply:

$$\text{dB}\mu\text{V} = 20(\log \mu\text{V})$$

$$\mu\text{V} = \text{Inverse log}(\text{dB}\mu\text{V}/20)$$

Conducted emissions on the 50 Hz and/or 60 Hz power interface of the EUT are measured in the frequency range of 150 kHz to 30 MHz. The measurements are performed using a receiver, which has CISPR characteristic bandwidth and quasipeak detection, and a Line Impedance Stabilization Network (LISN), with 50 Ω /50 μ H (CISPR 16) characteristics. Table top equipment is placed on a non-conducting table 80 centimeters above the floor and is positioned 40 centimeters from the vertical ground plane (wall) of the screen room. If the minimum passing margin appears to be less than 20 dB with a peak mode measurement, the emissions are remeasured using a tuned receiver with quasipeak and average detection and recorded on the data sheets.

Min. limit margin

_____ dB at _____ MHz

Max. limit exceeding

_____ dB at _____ MHz

Remarks: _____

SPURIOUS EMISSION

Spurious emissions from the EUT are measured in the frequency range of 30 to 10 times the highest used frequency using a tuned receiver and appropriate broadband linearly polarized antennas. Measurements between 30 MHz and 1000 MHz are made with 120 kHz/6 dB bandwidth and quasipeak detection and measurements above 1000 MHz are made with a 1 MHz/6 dB bandwidth and peak detection, remeasurement of results which may be critical will be repeated in average mode. Table top equipment is placed on a 1.0 X 1.5 meter non-conducting table 80 centimeters above the ground plane. Floor standing equipment is placed directly on the turntable/ground plane. Interface cables that are closer than 40 centimeters to the ground plane are bundled in the center in a serpentine fashion so they are at least 40 centimeters from the ground plane. Cables to simulators/testers (if used in this test) are routed through the center of the table and to a screen room located outside the test area. The antenna was positioned 3, 10 or 30 meters horizontally from the EUT. To locate maximum emissions from the test sample the antenna is varied in height from 1 to 4 meters, measurement scans are made with both horizontal and vertical antenna polarizations and the EUT are rotated 360 degrees.

- o - in a shielded room
- o - at a non - reflecting open-site and
- o - in a testdistance of 3 meters.
- o - in a testdistance of 30 meters.

For TEST EQUIPMENT USED please refer to ATTACHMENT D: _____

Description of Measurement

The final level, expressed in dB μ V/m, is arrived at by taking the reading from the EMI receiver (Level dB μ V) and adding the antenna correction factor and cable loss factor (Factor dB) to it. This result then has to be compared with the relevant FCC limit.

Example:

Frequency (MHz)	Level (dB μ V)	+	Factor (dB)	=	Level (dB μ V/m)	Limit (dB μ V/m)	=	Delta (dB)
1.705	5	+	20	=	25	30	=	5

Testresult

Remarks: Not applicable.

SPURIOUS EMISSIONS (electric field) 30 MHz - 1000 MHz

o - Test not applicable

- - Landshuter Straße 211a, D-94315 Straubing
- - 3 meters

For TEST EQUIPMENT USED please refer to ATTACHMENT D: SER2**Description of Measurement**

The final level, expressed in dB μ V/m, is arrived by taking the reading from the EMI receiver (Level dB μ V) and adding the correction factors and cable loss factor (Factor dB) to it. This is done automatically in the EMI receiver, where the correction factors are stored. This result then has the FCC or CISPR limit subtracted from it to provide the Delta which gives the tabular data as shown in the data sheets at page 24 - 25. The CISPR 22 limit is equivalent to the Australian AS 3548 limit.

Example:

Frequency (MHz)	Level (dB μ V)	+	Factor (dB)	=	Level (dB μ V/m)	Limit (dB μ V/m)	=	Delta (dB)
719	75	+	32.6	=	107.6	110	=	-2.4

FIELD STRENGTH OF THE FUNDAMENTAL WAVE

o - Test not applicable

Testlocation :

- - Landshuter Straße 211a, D-94315 Straubing
- - 3 meters

For TEST EQUIPMENT USED please refer to ATTACHMENT D: CPR2

Description of Measurement

The final level, expressed in dBµV/m, is arrived by taking the reading from the EMI receiver (Level dBµV) and adding the correction factors and cable loss factor (Factor dB) to it. This is done automatically in the EMI receiver, where the correction factors are stored. This result then has the FCC or CISPR limit subtracted from it to provide the Delta which gives the tabular data as shown in the data sheets at page 24 - 25. The CISPR 22 limit is equivalent to the Australian AS 3548 limit.

Example:

Frequency (MHz)	Level (dBµV)	+	Factor (dB)	=	Level (dBµV/m)	Limit (dBµV/m)	=	Delta (dB)
719	75	+	32.6	=	107.6	110	=	-2.4

Example of calculation of the max. power based on the fieldstrength measured in a distance of 3 m:

Fieldstrength E (LOG) = 109.6 dBµV/m
 Fieldstrength E (LIN) = 0.302 V/m

$$P = (E \times D)^2 / 49.5$$

$$P = (0.302 \text{ V/m} \times 3 \text{ m})^2 / 49.5 = 0.0169 \text{ W} = \underline{\underline{16.6 \text{ mW}}}$$

CONDUCTED POWER OF THE FUNDAMENTAL WAVE MEASURED ON THE ANTENNA TERMINALS

■ - Test not applicable

Testlocation :

o - Shielded room no.

For TEST EQUIPMENT USED please refer to ATTACHMENT D: _____

Description of Measurement

The conducted power of the fundamental wave measured on the antenna terminals in a climatic test chamber. The antenna jack was connected to the input of a communication test receiver. The internal batteries have been removed also and a variable DC power supply was used instead. The measurements have been made with the EUT unmodulated. During the test the supply voltage and the temperature were varied and applied simultaneously. The lower supply voltage was given by the manufacturer. In case the equipment was switching off before, the switch off voltage was used instead.

MODULATION LIMITING DATA

o - Test not applicable

Testlocation :

■ - Shielded room no. 5

For TEST EQUIPMENT USED please refer to ATTACHMENT D: MLD

Description of Measurement

The modulation limiting data were measured on the antenna terminals for EUT's with external connector. Other EUT's are tested via an adequate coupling device with antenna jack. The antenna jack was connected to the input of a communication test receiver. The internal batteries of the EUT, have been removed also and an external DC power supply was used instead. The data have been taken by feeding the connectors used for connecting the microphone with different audio frequencies. These frequencies are generated in the communication test receiver. The level was varied in 10 dB steps from 20 dB μ V to the maximum audio input level specified by the manufacturer. The frequency deviation at this levels have been recorded.

PFD: Positive frequency deviation

NFD: Negative frequency deviation

For the occupied bandwidth plot the value of 50 % of the maximum frequency deviation was calculated. The level on the audio input was increased until this 50 % frequency deviation was achieved. To this level 16 dB have been added and a plot was made as described in the next chapter under section occupied bandwidth.

Testresult

FREQUENCY ERROR

o - Test not applicable

Testlocation :

- - Test location 1
- - Climatic test chamber VLK

For TEST EQUIPMENT USED please refer to ATTACHMENT D: FE

Description of Measurement

The frequency error was measured on the antenna terminals for EUT's with external connector. Other EUT's are tested via an adequate coupling device with antenna jack in a climatic test chamber. The antenna jack was connected to the input of a communication test receiver. The internal batteries have been removed also and a variable DC power supply was used instead. The measurements have been made with the EUT unmodulated. During the test the supply voltage and the temperature were varied and applied simultaneously. The lower supply voltage was given by the manufacturer. In case the equipment was switching off before, the switch off voltage was used instead. The frequency error is defined as the deviation of the transmitting frequency from the nominal frequency.

Testresult:

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

o - Test not applicable

Testlocation :

■ - Shielded room no. 5

For TEST EQUIPMENT USED please refer to ATTACHMENT D: EM

Description of Measurement

The requirements of the emission mask were measured with different input signals on the antenna terminals for EUT's with external connector. Other EUT's are tested via an adequate coupling device with antenna jack. The antenna jack was connected to the input of a spectrum analyzer. The spectrum analyzer was set up as following:

- video and resolution bandwidth: 10 kHz
- attenuation: automatic, low noise
- center frequency: nominal transmit frequency
- frequency span: 500 kHz

The reference level was set to the maximum value of the unmodulated carrier. The internal batteries have been removed also and a variable DC power supply was used instead. The measurements have been made with a modulation frequency and voltage accdg. to the specification of the manufacturer. The audio frequency was provided by a communication test receiver. During the test the supply voltage and the temperature were varied and applied simultaneously. The lower supply voltage was given by the manufacturer. In case the equipment was switching off before, the switch off voltage was used instead.

Testresult

The following table is showing the minimal margin to the required attenuations:

Frequency range of equipment		US 54 710.400 MHz	
input modulation	DCsupply voltage [V]	±50-100% [dB]	±100-250% [dB]
1 KHz	1.6	> 25	> 25

The requirements are

■ - MET

○ - NOT MET

The **requirements** are as following:

Attenuation on any frequencies removed from the transmit frequency
between 50 and 100 % of the authorized bandwidth: at least 25 dB
between 100 and 250 % of the authorized bandwidth: at least 35 dB
more than 250 % of the authorized bandwidth: see spurious emissions

Remarks: The limit is kept. The attenuation is related to the un-
modulated carrier.

- o - Standby
- o - Testprogram (H - Pattern)
- o - Testprogram (color bar)
- o - Testprogram (customer specific)
- - Transmit (unmodulated)(for radiated measurements and frequency error)
- - Transmit (modulated: 20 kHz, 4.23 V)(for bandwidth under extreme conditions measurements)
- o -

- [illegible]

- o - unshielded power cable
 - o - unshielded cables
 - o - shielded cables
 - o - customer specific cables (wireless microphone)
 - - no cables

S U M M A R Y

GENERAL REMARKS:

The product MP40, has been tested on the following frequency:

US 54: 710.400 MHz

US 60 B: 751.550 MHz

EU 62 B: 805.100 MHz

FINAL JUDGEMENT:

The requirements according to the technical regulations and tested operation modes are

■ - met.

o - **not** met.

The equipment under test

■ - **Fulfills** the general approval requirements cited on page 3.

o - **Does not** fulfill the general approval requirements cited on page 3.

Date of receipt of test sample : accdg. to storage record

Testing Start Date : September 03, 2003

Testing End Date : October 20, 2003

Set US 60 B working on 751.550 MHz

Date: 17.OCT.2003 09:54:04

Audio test level: 119.3 dBμV / 1 kHz
DC supply voltage: 1.05 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set US 60 B working on 751.550 MHz

Date: 17.OCT.2003 09:49:01

Audio test level: 119.3 dB μ V / 1 kHz
DC supply voltage: 1.6 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set US 60 B working on 751.550 MHz

Date: 17.OCT.2003 10:02:46

Audio test level: 119.3 dB μ V / 15 kHz
DC supply voltage: 1.05 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set US 60 B working on 751.550 MHz

Date: 17.OCT.2003 09:58:48

Audio test level: 119.3 dB μ V / 15 kHz
DC supply voltage: 1.6 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set US 60 B working on 751.550 MHz

Date: 17.OCT.2003 10:15:51

Audio test level: 119.3 dB μ V / 20 kHz
DC supply voltage: 1.05 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set US 60 B working on 751.550 MHz

Date: 17.OCT.2003 10:12:41

Audio test level: 119.3 dB μ V / 20 kHz
DC supply voltage: 1.6 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set US 60 B working on 751.550 MHz

Date: 17.OCT.2003 09:52:26

Audio test level: 4.23 V / 1 kHz
DC supply voltage: 1.05 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set US 60 B working on 751.550 MHz

Date: 17.OCT.2003 09:51:16

Audio test level: 4.23 V / 1 kHz
DC supply voltage: 1.6 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set US 60 B working on 751.550 MHz

Date: 17.OCT.2003 10:01:29

Audio test level: 4.23 V / 15 kHz
DC supply voltage: 1.05 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set US 60 B working on 751.550 MHz

Date: 17.OCT.2003 10:00:09

Audio test level: 4.23 V / 15 kHz
DC supply voltage: 1.6 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set US 60 B working on 751.550 MHz

Date: 17.OCT.2003 10:16:22

Audio test level: 4.23 V / 20 kHz
DC supply voltage: 1.05 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set US 60 B working on 751.550 MHz

Date: 17.OCT.2003 10:13:10

Audio test level: 4.23 V / 20 kHz
DC supply voltage: 1.6 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set EU 62 B working on 805.100 MHz

Date: 17.OCT.2003 11:07:09

Audio test level: 115.9 dB μ V / 1 kHz
DC supply voltage: 1.05 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set EU 62 B working on 805.100 MHz

Date: 17.OCT.2003 11:02:51

Audio test level: 115.9 dBμV / 1 kHz
DC supply voltage: 1.6 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set EU 62 B working on 805.100 MHz

Date: 17.OCT.2003 11:22:38

Audio test level: 115.9 dBμV / 15 kHz
DC supply voltage: 1.05 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set EU 62 B working on 805.100 MHz

Date: 17.OCT.2003 11:18:26

Audio test level: 115.9 dB μ V / 15 kHz
DC supply voltage: 1.6 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set EU 62 B working on 805.100 MHz

Date: 17.OCT.2003 11:29:16

Audio test level: 115.9 dBμV / 20 kHz
DC supply voltage: 1.05 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set EU 62 B working on 805.100 MHz

Date: 17.OCT.2003 11:05:45

Audio test level: 4.23 V / 1 kHz
DC supply voltage: 1.05 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set EU 62 B working on 805.100 MHz

Date: 17.OCT.2003 11:04:14

Audio test level: 4.23 V / 1 kHz
DC supply voltage: 1.6 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set EU 62 B working on 805.100 MHz

Date: 17.OCT.2003 11:19:39

Audio test level: 4.23 V / 15 kHz
DC supply voltage: 1.6 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set EU 62 B working on 805.100 MHz

Date: 17.OCT.2003 11:27:50

Audio test level: 4.23 V / 20 kHz
DC supply voltage: 1.05 V

KEEPING THE REQUIREMENTS OF THE EMISSION MASK

MP40

Set EU 62 B working on 805.100 MHz

Date: 17.OCT.2003 11:26:33

Audio test level: 4.23 V / 20 kHz
DC supply voltage: 1.6 V

FCC ID: E9MMP40II

Attachment B:

Test Report No: T23834-00-00KJ
 Beginning of Testing: 3 September 2003
 End of Testing: 20 Oktober 2003

All test instruments used, in addition to the test accessories, are calibrated and verified regularly.

CONSTRUCTIONAL DATAFORM FOR TESTING OF RADIO EQUIPMENT

Licence holder:	AKG Acoustics, U.S.		
Address:	914 Airpark Center Dr., Nashville, TN 37217, U.S.A.		
Manufacturer:	Vtech Communications Ltd		
Address:	Vtech Science Park, Xia Ling Bei Management Zone, Liabou, Dongguan Guangdong 523411		
Type:	MP40		
Model:			
Serial-No.:		Protection class:	

Additional informations to the above named model:

Antenna: transmitter: receiver:	Type: integral		
	Length/size: dipole		
	Type:		
	Length/size:		
Power supply of the transmitter: Type:	1 AAA Cell or NiCd	nominal voltage:	1.5 V
		lowest voltage:	1.05 V
		highest voltage:	1.6 V
		current consumption	~75mA@1.2V
		nominal voltage:	V
Power supply of the receiver: Type:		nominal voltage:	V
		current consumption	A

Ancillary equipment:

Description:	Type:	Serial-no.:
Description:	Type:	Serial-no.:
Description:	Type:	Serial-no.:

Extreme temperature range in which the approval test should be performed:

☐ Category I: General (-20°C to +55°C)

☐ Category II: Portable (-10°C to +55°C)

☐ Category III: Equipment for normal indoor use (0°C to +55°C)

Connectable cables:

Name of the cable	Digital	Length/m	shielded

Applicant: _____ AKG _____ Model-name: _____ MP40 _____

Type designation: MP40			
Name and type designation of individual units comprising the radio equipment:			
Type of equipment:			
☐ Radiotelephone equipment	☐ Remote-control equipment	☐ Radiomaritime equipment	☐ LPD
☐ One-way radiotelephone equipment	☐ Inductive loop system	☐ Inland waterways equipment	☐ RLAN
☐ Personal paging system	☐ Radio-relay system	☐ Radionavigation equipm.	☒ wireless microphone
☐ Satellite earth station	☐ CB radiotelephone equipment	☐ Antenna	☐
☐ Data transmission equipment	☐ Movement detector	☐ Aeronautical equipment	☐
Technical characteristics:			
	Transmitter-receiver	Transmitter	Receiver
Frequency range		710.4.. 805,1MHz FCC (710.4..864.85 Europe)	
Maximum no. of channels			
Channel spacing		200k	
Class of emission (type of modulation)		200KF3E	
Maximum RF output power			
Maximum effective radiated power (ERP)		4mW+-3dB	
Output power variable		no	
Channel switching frequency range		1 channel	
Method of frequency generation	☐ Synthesizer ☒ Crystal ☐ Other		
Frequency generation TX	Crystal/ multiplier		
Frequency generation RX			
IF	1st IF	2nd IF	3rd IF
Integral selective calling	no		
Audio-frequency interface level at external data socket	1.2Vrms for 60% of maximum deviation at 1kHz; impedance 4k7ohms / 3,8DC , capsule included audio bandwidth 50Hz-20kHz		
Modes of operation	☐ Duplex mode ☐ Semi-duplex mode ☒ Simplex mode		
Power source	☐ Mains ☐ Vehicle-regulated ☒ Integral		
Antenna socket	☐ BNC ☐ TNC ☐ N ☐ M ☐ UHF ☐ Adapter ☒ None ☐		
Test specifications: FCC Part 74,			

O If applicable, if necessary complete overleaf
