Attestation of compliance with Part 22.919 – Electronic Serial Number Protection

The Electronic Serial Number (ESN) is a 32 bit binary number that uniquely identifies a cellular mobile transmitter to any cellular system. We certify that the ST800 Guardian GPS Vehicle Locator, FCC ID: EFCST800, which incorporates the Sierra Wireless SB508, complies with the requirements for ESN protection in Section 22.919.

- (a) Each SB508 mobile transmitter in service has a unique ESN.
- (b) The SB508 ESN host component is permanently attached to a main circuit board of the mobile transmitter and the integrity of the unit's operating software is not alterable. The ESN is encoded using a cyclic coding technique.
- (c) The SB508 ESN is factory set and is not alterable, transferable, removable or otherwise able to be manipulated. Any attempt to remove, tamper with, or change the ESN chip, its logic system, or firmware originally programmed by the manufacturer will render the mobile transmitter inoperative.

Sincerely,
David Roddis
