

# FCC RADIO TEST REPORT

According to

47 CFR FCC Part 15 Subpart C § 15.247

**Equipment** : Tablet PC  
**Brand Name** : FUJITSU  
**Model No.** : M532  
**Filing Type** : New Application  
**Applicant** : Fujitsu Limited  
1-1, Kamikodanaka 4-chome Nakahara-ku,  
Kawasaki, Kanagawa 211-8588, JAPAN  
**Manufacturer** : PEGATRON PROTEK (SHANGHAI) LIMITED  
No. 3768, Xiu Yan Rd., Kang Qiao Town,  
Pu Dong Dist., Shang Hai  
**Received Date** : Apr. 17, 2012  
**Final Test Date** : Jun. 05, 2012

## Statement

**Test result included in this report is only for (802.11a/n Band 4) of the product.**

The test result in this report refers exclusively to the presented test model / sample.

Without written approval of SPORTON International Inc., the test report shall not be reproduced except in full.

The measurements and test results shown in this test report were made in accordance with the procedures and found in compliance with the limit given in **ANSI C63.4-2009** and **47 CFR FCC Part 15 Subpart C**.

The test equipment used to perform the test is calibrated and traceable to NML/ROC.

# **CERTIFICATE OF COMPLIANCE**

According to

47 CFR FCC Part 15 Subpart C § 15.247

Equipment : Tablet PC

Brand Name : FUJITSU

Model No. : M532

Applicant : Fujitsu Limited

1-1, Kamikodanaka 4-chome Nakahara-ku,  
Kawasaki, Kanagawa 211-8588, JAPAN

Sporton International as requested by the applicant to evaluate the EMC performance of the product sample received on Apr. 17, 2012 would like to declare that the tested sample has been evaluated and found to be in compliance with the tested rule parts. The data recorded as well as the test configuration specified is true and accurate for showing the sample's EMC nature.

Wayne Hsu / Assistant Manager

| Radiated Emissions (30MHz~1000MHz)          | ±1.9dB                | Confidence levels of 95% |
| Radiated / Band Edge Emissions (1GHz~18GHz) | ±1.9dB                | Confidence levels of 95% |
| Radiated Emissions (18GHz~40GHz)            | ±1.9dB                | Confidence levels of 95% |
| Temperature                                 | ±0.7℃                 | Confidence levels of 95% |
| Humidity                                    | ±3.2%                 | Confidence levels of 95% |
| DC / AC Power Source                        | ±1.4%                 | Confidence levels of 95% |

## 2 GENERAL INFORMATION

### 2.1 Product Details

The equipment may match the two antennas use. Performed the worst configuration for (Chip Antenna) was test in final test report. Only the radio detail of IEEE 802.11a/n is shown in this report. For more detailed features description, please refer to the manufacturer's specifications or user's manual.

| Items                               | Description                                                                                                            |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------|

## 2.5 Table for Test Modes

Preliminary tests were performed in different data rate to find the worst radiated emission. The data rate shown in the table below is the worst-case rate with respect to the specific test item. Investigation has been done on the entire possible configuration for searching the worst cases. The following table is a list of the test modes shown in this test report.

| Test Items                        | Mode              | Data Rate | Channel     |
|-----------------------------------|-------------------|-----------|-------------|
| AC Power Line Conducted Emissions | Transmitting Mode | -         | -           |
| Radiated Emissions Below 1GHz     |                   |           |             |
| Maximum Peak Output Power         | 11a/BPSK          | 6 Mbps    | 149/157/165 |
| Power Spectral Density            | MCS 0 (20MHz)     | 6.5Mbps   | 149/157/165 |
| 6dB Spectrum Bandwidth            | 11a/BPSK          | 6 Mbps    | 149/157/165 |
| 99% Occupied Bandwidth            | MCS 0 (20MHz)     | 6.5Mbps   | 149/157/165 |
| Radiated Emissions Above 1GHz     | 11a/BPSK          | 6 Mbps    | 149/157/165 |
| Fundamental Emissions             | MCS 0 (20MHz)     | 6.5Mbps   | 149/157/165 |
| Band Edge Emissions               | 11a/BPSK          | 6 Mbps    | 149/165     |
|                                   | MCS 0 (20MHz)     | 6.5Mbps   | 149/165     |

## 2.6 Table for Testing Locations

| Test Site No. | Site Category | Location |
|---------------|---------------|----------|
| CO04-HY       | Conduction    | Hwa Ya   |
| TH01-HY       | OVEN Room     | Hwa Ya   |
| 03CH02-HY     | SAC           | Hwa Ya   |

Semi Anechoic Chamber (SAC).

## 2.7 Table for Supporting Units

| Support Unit | Brand | Model | FCC ID |
|--------------|-------|-------|--------|
| Notebook     | DELL  | E5520 | DoC    |

## 2.8 Table for Parameters of Test Software Setting

During testing, Channel & Power Controlling Software provided by the customer was used to control the operating channel as well as the output power level. The RF output power selection is for the setting of RF output power expected by the customer and is going to be fixed on the firmware of the final end product.

### Power Parameters of IEEE 802.11a/n

| Test Software Version | Command  |          |          |
|-----------------------|----------|----------|----------|
| Frequency             | 5745 MHz | 5785 MHz | 5825 MHz |
| IEEE 802.11a          | 9        | 9        | 9        |
| IEEE 802.11n (20MHz)  | 8        | 8        | 8        |

## 2.9 EUT Operation during Test

During the test, the "Dos.exe" under Win 7 was executed to read and write data from EUT.

- Executed "Dos.exe" to keep transmitting signals at fixed frequency.

**2.10 Test Configuration****Conducted emissions****Radiated emissions 9kHz~1GHz**

**Radiated emissions above 1GHz**

### 3 TEST RESULT

#### 3.1 AC Power Line Conducted Emissions Measurement

##### 3.1.1 Limit

For this product which is designed to be connected to the AC power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies within the band 150 kHz to 30 MHz shall not exceed below limits table.

##### Class B

| Frequency (MHz) | QP Limit (dBuV) | AV Limit (dBuV) |
|-----------------|-----------------|-----------------|
| 0.15~0.5        | 66~56           | 56~46           |
| 0.5~5           | 56              | 46              |
| 5~30            | 60              | 50              |

##### 3.1.2 Measuring Instruments and Setting

Please refer to section 4 of equipments list in this report. The following table is the setting of the receiver.

| Receiver Parameters | Setting  |
|---------------------|----------|
| Attenuation         | 10 dB    |
| Start Frequency     | 0.15 MHz |
| Stop Frequency      | 30 MHz   |
| IF Bandwidth        | 9 kHz    |

##### 3.1.3 Test Procedures

1. The EUT was warmed up for 15 minutes before testing started.
2. The EUT was placed on a desk 0.8 meters height from the metal ground plane and 0.4 meter from the conducting wall of the shielding room and it was kept at least 0.8 meters from any other grounded conducting surface.
3. Connect EUT to the power mains through a line impedance stabilization network (LISN).
4. All the support units are connect to the other LISN.
5. The LISN provides 50 ohm coupling impedance for the measuring instrument.
6. The CISPR states that a 50 ohm, 50 microhenry LISN should be used.
7. Both sides of AC line were checked for maximum conducted interference.
8. The frequency range from 150 kHz to 30 MHz was searched.
9. Set the test-receiver system to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

### 3.1.4 Test Setup Layout

#### LEGEND:

- (1) Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 to 40 cm long.
- (2) I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated, if required, using the correct terminating impedance. The overall length shall not exceed 1 m.
- (3) EUT connected to one LISN. Unused LISN measuring port connectors shall be terminated in 50  $\Omega$ . LISN can be placed on top of, or immediately beneath, reference ground plane.
- (3.1) All other equipment powered from additional LISN(s).
- (3.2) Multiple outlet strip can be used for multiple power cords of non-EUT equipment.
- (3.3) LISN at least 80 cm from nearest part of EUT chassis.
- (4) Cables of hand-operated devices, such as keyboards, mice, etc., shall be placed as for normal use.
- (5) Non-EUT components of EUT system being tested.
- (6) Rear of EUT, including peripherals, shall all be aligned and flush with rear of tabletop.
- (7) Rear of tabletop shall be 40 cm removed from a vertical conducting plane that is bonded to the ground plane.

### 3.1.5 Test Deviation

There is no deviation with the original standard.

### 3.1.6 EUT Operation during Test

The EUT was placed on the test table and programmed in transmitting mode.

## 3.1.7 Results of AC Power Line Conducted Emissions Measurement

Note:

Level = Read Level + LISN Factor + Cable Loss.

## 3.2 Maximum Peak Output Power Measurement

### 3.2.1 Limit

For systems operating in the 5725-5850 MHz band that are used exclusively for fixed, point-to-point operations may employ transmitting antennas with directional gain greater than 6 dBi without any corresponding reduction in transmitter conducted output power.

### 3.2.2 Measuring Instruments and Setting

Please refer to section 4 of equipments list in this report. The following table is the setting of the power meter.

| Power Meter Parameter | Setting        |
|-----------------------|----------------|
| Filter No.            | Auto           |
| Measurement time      | 0.135 s ~ 26 s |
| Used Peak Sensor      | MA2411B        |

### 3.2.3 Test Procedures

1. The transmitter output (antenna port) was connected to the power meter.
2. Turn on the EUT and power meter and then record the peak power value.
3. Repeat above procedures on all channels needed to be tested.
4. When measuring maximum conducted output power within multiple antenna systems, add every result of the values by mathematic formula. (Only for IEEE 802.11n test)

### 3.2.4 Test Setup Layout

### 3.2.5 Test Deviation

There is no deviation with the original standard.

### 3.2.6 EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

## 3.2.7 Test Result of Maximum Peak Output Power

|                 |              |                |           |

### 3.3 Power Spectral Density Measurement

#### 3.3.1 Limit

For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission.

#### 3.3.2 Measuring Instruments and Setting

Please refer to section 4 of equipments list in this report. The following table is the setting of the spectrum analyzer.

| Spectrum Parameter | Setting  |
|--------------------|----------|
| Attenuation        | Auto     |
| Span Frequency     | 1.5MHz   |
| RB                 | 3 kHz    |
| VB                 | 30 kHz   |
| Detector           | Peak     |
| Trace              | Max Hold |
| Sweep Time         | 500s     |

#### 3.3.3 Test Procedures

1. The transmitter output (antenna port) was connected to the spectrum analyzer.
2. Set RBW of spectrum analyzer to 3kHz and VBW to 30kHz. Set Detector to Peak, Trace to Max Hold.
3. Mark the frequency with maximum peak power as the center of the display of the spectrum.
4. Set the span to 1.5MHz and the sweep time to 500s and record the maximum peak value.
5. When measuring maximum conducted output power within multiple antenna systems, add every result of the values by mathematic formula. (Only for IEEE 802.11n test)

#### 3.3.4 Test Setup Layout

#### 3.3.5 Test Deviation

There is no deviation with the original standard.

#### 3.3.6 EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

## 3.3.7 Test Result of Power Spectral Density

### 3.4 6dB Spectrum Bandwidth Measurement

#### 3.4.1 Limit

For digital modulation systems, the minimum 6dB bandwidth shall be at least 500 kHz.

#### 3.4.2 Measuring Instruments and Setting

Please refer to section 4 of equipments list in this report. The following table is the setting of the spectrum analyzer.

| Spectrum Parameters | Setting         |
|---------------------|-----------------|
| Attenuation         | Auto            |
| Span Frequency      | > 6dB Bandwidth |
| RB                  | 100 kHz         |
| VB                  | 300 kHz         |
| Detector            | Peak            |
| Trace               | Max Hold        |
| Sweep Time          | Auto            |

#### 3.4.3 Test Procedures

1. The transmitter output (antenna port) was connected to the spectrum analyzer in peak hold mode.
2. For 6dB Bandwidth the resolution bandwidth of 100 kHz and the video bandwidth of 300 kHz were used.
3. Measured the spectrum width with power higher than 6dB below carrier.
4. For 99% Occupied Bandwidth the resolution Bandwidth of 100 kHz and the video bandwidth of 300 kHz were used.

#### 3.4.4 Test Setup Layout

#### 3.4.5 Test Deviation

There is no deviation with the original standard.

#### 3.4.6 EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

### 3.5 Radiated Emissions Measurement

#### 3.5.1 Limit

In any 100kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. If the transmitter measurement is based on the maximum conducted output power, the attenuation required under this paragraph shall be 30dB instead of 20dB. In addition, radiated emissions which fall in section 15.205(a) the restricted bands must also comply with the radiated emission limit specified in section 15.209(a).

| Frequencies (MHz) | Field Strength (microvolt/meter) | Measurement Distance (meters) |
|-------------------|----------------------------------|-------------------------------|
| 0.009~0.490       | 2400/F(kHz)                      | 300                           |
| 0.490~1.705       | 24000/F(kHz)                     | 30                            |
| 1.705~30.0        | 30                               | 30                            |
| 30~88             | 100                              | 3                             |
| 88~216            | 150                              | 3                             |
| 216~960           | 200                              | 3                             |
| Above 960         | 500                              | 3                             |

#### 3.5.2 Measuring Instruments and Setting

Please refer to section 4 of equipments list in this report. The following table is the setting of spectrum analyzer and receiver.

| Spectrum Parameter                        | Setting                                        |
|-------------------------------------------|------------------------------------------------|
| Attenuation                               | Auto                                           |
| Start Frequency                           | 1000 MHz                                       |
| Stop Frequency                            | 10th carrier harmonic                          |
| RB / VB (Emission in restricted band)     | 1MHz / 1MHz for Peak, 1 MHz / 10Hz for Average |
| RB / VB (Emission in non-restricted band) | 1MHz / 1MHz for peak                           |

| Receiver Parameter     | Setting                          |
|------------------------|----------------------------------|
| Attenuation            | Auto                             |
| Start ~ Stop Frequency | 9kHz~150kHz / RB 200Hz for QP    |
| Start ~ Stop Frequency | 150kHz~30MHz / RB 9kHz for QP    |
| Start ~ Stop Frequency | 30MHz~1000MHz / RB 120kHz for QP |

**3.5.3 Test Procedures**

1. Configure the EUT according to ANSI C63.4. The EUT was placed on the top of the turntable 0.8 meter above ground. The phase center of the receiving antenna mounted on the top of a height-variable antenna tower was placed 3 meters far away from the turntable.
2. Power on the EUT and all the supporting units. The turntable was rotated by 360 degrees to determine the position of the highest radiation.
3. The height of the broadband receiving antenna was varied between one meter and four meters above ground to find the maximum emissions field strength of both horizontal and vertical polarization.
4. For each suspected emissions, the antenna tower was scan (from 1 M to 4 M) and then the turntable was rotated (from 0 degree to 360 degrees) to find the maximum reading.
5. Set the test-receiver system to Peak or CISPR quasi-peak Detect Function with specified bandwidth under Maximum Hold Mode.
6. For emissions above 1GHz, use 1MHz VBW and RBW for peak reading. Then 1MHz RBW and 10Hz VBW for average reading in spectrum analyzer.
7. When the radiated emissions limits are expressed in terms of the average value of the emissions, and pulsed operation is employed, the measurement field strength shall be determined by averaging over one complete pulse train, including blanking intervals, as long as the pulse train does not exceed 0.1 seconds. As an alternative (provided the transmitter operates for longer than 0.1 seconds) or in cases where the pulse train exceeds 0.1 seconds, the measured field strength shall be determined from the average absolute voltage during a 0.1 second interval during which the field strength is at its maximum value.
8. If the emissions level of the EUT in peak mode was 3 dB lower than the average limit specified, then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions which do not have 3 dB margin will be repeated one by one using the quasi-peak method for below 1GHz.
9. For testing above 1GHz, the emissions level of the EUT in peak mode was lower than average limit (that means the emissions level in peak mode also complies with the limit in average mode), then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions will be measured in average mode again and reported.
10. In case the emission is lower than 30MHz, loop antenna has to be used for measurement and the recorded data should be QP measured by receiver. High – Low scan is not required in this case.

### 3.5.4 Test Setup Layout

For radiated emissions below 30MHz

For radiated emissions above 30MHz

Above 10 GHz shall be extrapolated to the specified distance using an extrapolation factor of 20 dB/decade from 3m to 1m.

Distance extrapolation factor =  $20 \log (\text{specific distance [3m]} / \text{test distance [1m]})$  (dB);

Limit line = specific limits (dBuV) + distance extrapolation factor [9.54 dB].

### 3.5.5 Test Deviation

There is no deviation with the original standard.

### 3.5.6 EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

**3.5.7 Results of Radiated Emissions (9kHz~30MHz)**

|                        |               |                      |           |

| <b>Freq.<br/>(MHz)</b> | <b>Level<br/>(dBuV)</b> | <b>Over Limit<br/>(dB)</b> | <b>Limit Line<br/>(dBuV)</b> | <b>Remark</b> |
|------------------------|-------------------------|----------------------------|------------------------------|---------------|
| -                      | -                       | -                          | -                            | See Note      |

**Note:**

The amplitude of spurious emissions that are attenuated by more than 20 dB below the permissible value has no need to be reported.

Distance extrapolation factor =  $40 \log (\text{specific distance} / \text{test distance})$  (dB);

Limit line = specific limits (dBuV) + distance extrapolation factor.

## Note:

The amplitude of spurious emissions that are attenuated by more than 20dB below the permissible value has no need to be reported.

Emission level (dBuV/m) = 20 log Emission level (uV/m).

Corrected Reading: Antenna Factor + Cable Loss + Read Level - Preamp Factor = Level.

3.5.9 Results for Radiated Emissions (1GHz~10<sup>th</sup> Harmonic)

| 2 | 11650.000 | 49.60  | -13.94     | 63.54      | 38.79             | 38.98          | 6.64       | 34.81         | PK     | ---     | ---       |
| 3 | 17475.000 | 58.97  |            |            | 43.00             | 41.51          | 8.44       | 33.98         | Peak   | ---     | ---       |

Note: The items 1 and 3 are on un-restricted band, so the limit is -20dB for the field strength of the fundamental emissions (see section 3.6.7).

### 3.6 Band Edge and Fundamental Emissions Measurement

#### 3.6.1 Limit

In any 100kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement. If the transmitter measurement is based on the maximum conducted output power, the attenuation required under this paragraph shall be 30dB instead of 20dB. In addition, radiated emissions which fall in section 15.205(a) the restricted bands must also comply with the radiated emission limit specified in section 15.209(a).

| Frequencies (MHz) | Field Strength (micorvolts/meter) | Measurement Distance (meters) |
|-------------------|-----------------------------------|-------------------------------|
| 0.009~0.490       | 2400/F(kHz)                       | 300                           |
| 0.490~1.705       | 24000/F(kHz)                      | 30                            |
| 1.705~30.0        | 30                                | 30                            |
| 30~88             | 100                               | 3                             |
| 88~216            | 150                               | 3                             |
| 216~960           | 200                               | 3                             |
| Above 960         | 500                               | 3                             |

#### 3.6.2 Measuring Instruments and Setting

Please refer to section 4 of equipments list in this report. The following table is the setting of the spectrum analyzer.

| Spectrum Parameter                        | Setting                                        |
|-------------------------------------------|------------------------------------------------|
| Attenuation                               | Auto                                           |
| Span Frequency                            | 100 MHz                                        |
| RB / VB (Emission in restricted band)     | 1MHz / 1MHz for Peak, 1 MHz / 10Hz for Average |
| RB / VB (Emission in non-restricted band) | 1MHz / 1MHz for Peak                           |

#### 3.6.3 Test Procedures

1. The test procedure is the same as section 3.5.3; only the frequency range investigated is limited to 100MHz around band edges.
2. In case the emission is fail due to the used RB/VB is too wide, marker-delta method of FCC Public Notice DA00-705 will be followed.

#### 3.6.4 Test Setup Layout

This test setup layout is the same as that shown in section 3.5.4.

#### 3.6.5 Test Deviation

There is no deviation with the original standard.

#### 3.6.6 EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

## 3.6.7 Test Result of Band Edge and Fundamental Emissions

|                 |              |               |                           |
|-----------------|--------------|---------------|---------------------------|
| Final Test Date | May 18, 2012 | Test Site No. | 03CH02-HY                 |
| Temperature     | 24.6°C       | Humidity      | 61%                       |
| Test Engineer   | Streak       | Configuration | 802.11a Ch. 149, 157, 165 |

## Channel 149

|     | Freq     | Level  | Over Limit | Limit Line | ReadAntenna Level | Antenna Factor | Cable Loss | Preamp Factor | Remark  | Ant Pos | Table Pos |
|-----|----------|--------|------------|------------|-------------------|----------------|------------|---------------|---------|---------|-----------|
|     | MHz      | dBuV/m | dB         | dBuV/m     | dBuV              | dB/m           | dB         | dB            |         | cm      | deg       |
| 1 @ | 5725.000 | 56.56  |            |            | 16.24             | 35.28          | 5.04       | 0.00          | Average | ---     | ---       |
| 2 @ | 5745.900 | 88.66  |            |            | 48.30             | 35.29          | 5.07       | 0.00          | Average | ---     | ---       |
| 1 @ | 5723.850 | 71.17  |            |            | 30.85             | 35.28          | 5.04       | 0.00          | Peak    | ---     | ---       |
| 2 @ | 5745.060 | 100.96 |            |            | 60.60             | 35.29          | 5.07       | 0.00          | Peak    | ---     | ---       |

The item 2 is fundamental emissions and the item 1 is on un-restricted band, so the limit is -20dB for the field strength of the fundamental emissions.

## Channel 157

|     | Freq     | Level  | Over Limit | Limit Line | ReadAntenna Level | Antenna Factor | Cable Loss | Preamp Factor | Remark  | Ant Pos | Table Pos |
|-----|----------|--------|------------|------------|-------------------|----------------|------------|---------------|---------|---------|-----------|
|     | MHz      | dBuV/m | dB         | dBuV/m     | dBuV              | dB/m           | dB         | dB            |         | cm      | deg       |
| 1 @ | 5701.870 | 56.39  |            |            | 16.08             | 35.27          | 5.04       | 0.00          | Average | ---     | ---       |
| 2 @ | 5784.150 | 90.81  |            |            | 50.40             | 35.32          | 5.09       | 0.00          | Average | ---     | ---       |
| 3 @ | 5863.710 | 56.37  |            |            | 15.85             | 35.39          | 5.13       | 0.00          | Average | ---     | ---       |
| 1 @ | 5715.300 | 69.36  |            |            | 29.05             | 35.27          | 5.04       | 0.00          | Peak    | ---     | ---       |
| 2 @ | 5784.830 | 102.99 |            |            | 62.58             | 35.32          | 5.09       | 0.00          | Peak    | ---     | ---       |
| 3 @ | 5864.390 | 68.99  |            |            | 28.47             | 35.39          | 5.13       | 0.00          | Peak    | ---     | ---       |

The item 2 is fundamental emissions and the items 1 and 3 are on un-restricted band, so the limit is -20dB for the field strength of the fundamental emissions.

## Channel 165

|     | Freq     | Level  | Over Limit | Limit Line | ReadAntenna Level | Antenna Factor | Cable Loss | Preamp Factor | Remark  | Ant Pos | Table Pos |
|-----|----------|--------|------------|------------|-------------------|----------------|------------|---------------|---------|---------|-----------|
|     | MHz      | dBuV/m | dB         | dBuV/m     | dBuV              | dB/m           | dB         | dB            |         | cm      | deg       |
| 1 @ | 5825.730 | 91.04  |            |            | 50.57             | 35.36          | 5.11       | 0.00          | Average | ---     | ---       |
| 2 @ | 5852.570 | 56.36  |            |            | 15.87             | 35.38          | 5.11       | 0.00          | Average | ---     | ---       |
| 1 @ | 5824.790 | 103.48 |            |            | 63.01             | 35.36          | 5.11       | 0.00          | Peak    | ---     | ---       |
| 2 @ | 5861.750 | 69.77  |            |            | 29.25             | 35.39          | 5.13       | 0.00          | Peak    | ---     | ---       |

The item 1 is fundamental emissions and the item 2 is on un-restricted band, so the limit is -20dB for the field strength of the fundamental emissions.

Note:

Emission level (dBuV/m) = 20 log Emission level (uV/m).

Corrected Reading: Antenna Factor + Cable Loss + Read Level - Preamp Factor = Level.

The item 1 is fundamental emissions and the item 2 is on un-restricted band, so the limit is -20dB for the field strength of the fundamental emissions.

## For Emission not in Restricted Band

### **3.7 Antenna Requirements**

#### **3.7.1 Limit**

Except for special regulations, the Low-power Radio-frequency Devices must not be equipped with any jacket for installing an antenna with extension cable. An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that the user can replace a broken antenna, but the use of a standard antenna jack or electrical connector is prohibited.

#### **3.7.2 Antenna Connector Construction**

Please refer to section 2.3 in this test report; antenna connector complied with the requirements.

#### 4 LIST OF MEASURING EQUIPMENTS

| Instrument             | Manufacturer                   | Model No. | Serial No. | Characteristics  | Calibration Date | Remark               |
|------------------------|--------------------------------|-----------|------------|------------------|------------------|----------------------|
| EMC Receiver           | R&S                            | ESCS 30   | 100174     | 9 kHz ~ 2.75 GHz | Mar. 23, 2012    | Conduction (CO04-HY) |
