3.3 Description of modification for Modification Filing

Not Applicable.

3.4 Comments

The channels and antenna to operate on was selected with a PC connected to the EUT through a test-jig. The software and test-jig was supplied by the applicant. The PC was only used for selection of channel and antenna.

The measurements were done with the EUT powered by 115 V AC. It was checked that power variations between 85% and 115% did not have any influence on the measurements.

All ports were populated during spurious emission measurements.

3.5 Family List Rational
