Class II Permissive Change Request
FCC Form 731**

for the

Mobile Data Platform Transceiver (800 MHz MDP)

With the

Dataradio Gemini Modem

**FCC ID: EOTGPDB
Trade Name: GEMINI/PD+**

December 5 , 2002

AFFIDAVIT

The technical data included in this report has been accumulated through tests that were performed by me or by engineers under my direction. To the best of my knowledge, all of the data is true and correct.

Norman D Pearl
Vice-president Engineering, Dataradio Inc.

Dataradio Inc.
Montreal, Canada

**ENGINEERING STATEMENT
OF CONSTANTIN PINTILEI**

The application consisting of the attached engineering exhibit and associated FCC form 731 has been prepared in support of a request for a Class II Permissive Change for EOTGPDB.

The certification EOTGPDB has been granted to Dataradio Inc for its Gemini/PD+ radio modem. Gemini/PD+ is comprised of the Dataradio COR Ltd. (DRL) Mobile Data Platform (MDP) 800 MHz Transceiver with the Dataradio Inc Gemini Modem. Dataradio Inc does the final assembly and markets the Gemini/PD unit. The EOTGPDB certificate has been granted for a 2-level FSK (DGMSK) and a 4-level FSK (xRC4FSK) types of modulation scheme together with associated maximum deviation levels at various rates. The change consist of the addition of a 8-level FSK modulation scheme with 4 new proposed rates. This change involves the firmware only, with no change whatsoever occurring in the hardware.

EXISTING CONDITIONS

The unit utilized for these occupied bandwidth and mask-compliance measurements was a prototype built from production EOTGPDB with a beta (prototype) firmware. The transceiver operates on frequencies ranging from 806.000 MHz to 824.000 MHz. The frequency tolerance of the transceiver is .00015% or 1.5 parts per million as granted in EOTGPDB.

PROPOSED CONDITIONS

It is proposed to accept the request for the GEMINI/PD, 806-824 MHz Transceiver/Modem/GPS for operation in the band of frequencies previously outlined. The applicant anticipates marketing the device for use in wireless transmission of data.

PERFORMANCE MEASUREMENTS

All measurements for Occupied Bandwidth and mask compliance as per 2.1043 (b)(2) were conducted in accordance with the Rules and Regulations Section 2.1041 and 2.1049 of Rules Service Co rev.2-163,Sep15,2002. Equipment performance measurements were made in the engineering laboratory located at 5500 Royalmount ave, Montreal, Canada. All measurements were made and recorded by myself or under my direction. The performance measurements were made between Nov, 20 and Dec 2, 2002

CONCLUSION

Given the results of the measurements contained herein, the applicant requests to have appended the new emission designators 14K7F1D and 11K2F1D in the list of the Certificate EOTGPDB and to have accepted the use of 11K0F1D with a 8-FSK modulation following the Class II Permissive Change, as per FCC part 2.1043(b)(2).

12/05/02

Constantin Pintilei, Eng
R&D Test Engineer, Dataradio Inc.

8 Years experience in radio frequency measurements.

CLASS II PERMISSIVE CHANGE INFORMATION REQUESTED BY GRANTEE - Rule part 2.1043 (b)(2)

The certification EOTGPDB has been granted to Dataradio Inc for its Gemini/PD radio modem. Gemini/PD is comprised of the Dataradio COR Ltd. (DRL) Mobile Data Platform (MDP) 800 MHz (806MHz-824MHz) Transceiver with the Dataradio Inc Gemini Modem. Dataradio Inc does the final assembly and markets the Gemini/PD unit.

The certificate, comprising its several Class II permissive changes already underwent, has been granted for:

- 8K60, 15K0 and 15K3F1D for respectively 9.6, 16.0 and 19.2kbps DGMSK– Differential Gaussian Minimum Shift Keying digital modulation
- 10K0, 10K2, 11K0, 11K5, 15K6 and 16K0 F1Dfor several 4-level FSK, xRC4FSK –Squared Root Raised Cosine 4-level Frequency Shift Keying.

The current Class II permissive change request asks for following four new 8-FSK modulations along with their emission designators: 14K7, 14K7, 11K2 and 11K0F1D for respectively 48.0, 43.2, 28.8 and 24.0 kbps 8-FSK SRRC digital modulations.

Only the 14K7, and 11K2F1D emission designators are suggested to be appended to the current list, 11K0F1D value is already in use for other above mentioned speeds.

Following the FCC part 2.1043(b)(2) rule, in order to market the proposed change we must obtain the acknowledgment of the Commission that the change is acceptable. Therefore a Class II Permissive Change request from the certificate granted on 12/04/2002 has been considered.

The characteristics affected are :

- | | |
|--|------------------------------|
| Digital Modulation Techniques | - part 2.1033.(c)(13) |
| Type of emission and Emission designators list | - part 2.1033 (c)(4), 90.209 |
| Occupied bandwidth and mask compliance requirement | - part 2.1049,90.210(g),(h) |

They are entirely documented with the current report.

Because this change is implemented in the operating firmware only, there are no change whatsoever occurring in schematics, part list, mechanical assembly, shape, label or any other hardware related issues. A preliminary version of the manual that contains appended service-related information for 8 level FSK modulation rates is provided as appendix of the report.

DIGITAL MODULATION TECHNIQUES

2.1033 (c)(13)

The Gemini modem generates 2 level Differential Gaussian Frequency Shift Keying (DGFSK) and 2ⁿ level family Raised Cosine Frequency Shift Keying. (xRC nFSK). 2-level DGFSK and 4-level xRC has been granted with the certificate EOTGPDB. This measurement concerns only 8-level xRC (raised cosine family) modulation, its description follows.

This digital modulation scheme is produced by the main CPU in conjunction with the DSP. The main CPU processes incoming binary data, applying Forward Error Correction (FEC), interleaving and scrambling, and from it generates an NRZ signal that is fed to the DSP processor for encoding and pulse shaping. The DSP processor assigns to every incoming group of three bits a symbol recorded in a level of frequency shift. The mapping follows a Gray scheme:100-highest positive frequency, 101-next highest positive,etc, to 000-lowest negative, resulting signal being a 8-DC level digital.

This 8-level signaling transmits three information bits per symbol (baud) which yields a bit rate of three times the on-air baud rate, hence the 28.8 kbps references in the Installation Guide correspond to a transmitter baud rate of 9600 baud. That digital signal is digitally filtered (Squared Root or pure Raised Cosine pulse shaping with roll off factor 0.4) by the DSP then fed to the CODEC for digital to analogue conversion. This xRC8FSK wave shape applied to the FM modulator will then produce a compact RF spectrum, when using proper frequency deviation, to fit inside the restrictive masks inherent to the intended channel bandwidth.

The transmitter deviation level and digital filter cutoff frequency (which is based on the raised cosine filter equation) are set according to the bit rate selected and channel bandwidth as shown in page 10.

Modulation Characteristic Part 2.1047 (d), 90.209 (b) 90.210(c),(d): Other types of equipment: this equipment is not provided with hardware audio low-pass filters, the filtering is entirely result of DSP firmware.

The transmitter deviation level and digital filter cutoff frequency (which is based on the raised cosine filter equation) are set according to the bit rate selected and channel bandwidth as follows:

Bit rate	Baud rate	Raised Cosine filter's 3dB cut-off frequency	Deviation
48000 b/s	16000bauds	8.0 kHz	± 3.65 kHz
43200 b/s	14400bauds	7.2 kHz	± 4.15 kHz
28800 b/s	9600bauds	4.8 kHz	± 3.39 kHz
24000 b/s	8000bauds	4.0 kHz	± 3.57 kHz

TEST DATA Rule Part Number: 2.1033 (c)(14)

All applicable test data according to:

-Part 2: 2.1043 (b)(2), 2.1049

-Part 90, Subpart I: 90.209 and 90.210(g),(h)

are provided in next section of this Engineering Report

The following test reports have been generated for Class II Permissive Change notification for EOTGPDB, Gemini/PD radio modem. Gemini/PD is comprised of the Dataradio COR Ltd. (DRL) Mobile Data Platform (MDP) 800MHz Transceiver with the Dataradio Inc Gemini Modem. Dataradio Inc does the final assembly and markets the Gemini/PD unit

The measurements were conducted following the procedures set forth in the TIA/EIA-603 revA standards.

NAME OF TEST:

Transmitter Occupied Bandwidth

RULE PART NUMBER: 2.201, 2.202, 2.1033 c (14), 2.1049 (h), 2.1041

Emission Designator Determination**Necessary Bandwidth Measurement (90.209.(b))**

This radiomodem uses digital modulation signals, passing through a Raised Cosine $\alpha=0.4$ DSP implemented low-pass filter to an FM transceiver. The necessary bandwidth calculation for this type of modulation (xRC4FSK) is not covered by paragraphs (1), (2) or (3) from 2.202(c), the result exceeding the real 99% necessary bandwidth obtained through simulations or measurement.

Therefore, the approach outlined in (2.202(c)(4)) is applicable in this case.

The results of 99% Occupied Bandwidth measurement are:

Baud rate	Deviation	Occupied Bandwidth	Authorised Bandwidth	Proposed Emission Designator
48000b/s	± 3.65 kHz	14670 Hz	20000Hz	14K7F1D
43200b/s	± 4.15 kHz	14670 Hz	20000Hz	14K7F1D
28800 b/s	± 3.39 kHz	11170 Hz	20000Hz	11K2F1D
24000 b/s	± 3.57 kHz	11000 Hz	20000Hz	11K0F1D

The measurement theory and set-up explanations follow.

Occupied Bandwidth Measurement

The Occupied Bandwidth measurement option of the instrument (8563EC spectrum analyzer from Agilent) calculates and provides the values used above for the emission designator.

The percentage setting of the measurement has been set to 99% following the definition of the **Occupied Bandwidth** “the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission” (FCC 2.202)

The measurement has been performed during the tests for compliance with mask G, the resulting value was recorded as Occupied Bandwidth.

The measurement set-up is:

NAME OF TEST: Transmitter Occupied Bandwidth
GEMINI Modem at 28800 bps, 9600bauds 8FSK

Mask compliance data in support of Emission Designator **11K2F1D**

RULE PART NUMBER: 2.201, 2.202, 2.1033 c (14), 2.1049 (h), 2.1041, 90.209 (b)(5), 90.210 (h)

MINIMUM STANDARD: Mask H
Sidebands and Spurious [Rule 90.210 (h)]
Authorized Bandwidth = 20 kHz [Rule 90.209(b) (5)]
Fo to 4.0 kHz Attenuation = 0 dB
>4.0 kHz to 8.5 kHz Attenuation= $107 \cdot \log(f_d / 4)$ dB
>8.5 kHz to 15 kHz Attenuation= $40.5 \cdot \log(f_d / 1.16)$ dB
>15 kHz to 25kHz Attenuation = $116 \cdot \log(f_d / 6.1)$ dB
>25kHz $43 + 10 \cdot \log(P)$ dB
Corner Points:
Fo to 4.0 kHz Attenuation = 0 dB
>4.0 kHz to 8.5 kHz Attenuation= 0 dB to 35 dB
>8.5 kHz to 15 kHz Attenuation = 35 dB to 45 dB
>15 kHz to 25 kHz Attenuation =45 dB to 71 dB
>25 kHz Attenuation =53dB (10W-generic)
The limits would read 59dB for 40W and 50dB for 5W output.

TEST RESULTS: Meets minimum standard (see data on the following pages)

TEST SET-UP:

NAME OF TEST: Transmitter Occupied Bandwidth (Continued)
GEMINI Modem at 28800 bps, 9600bauds 8FSK

MODULATION SOURCE DESCRIPTION:

TX Data Test Pattern:

The transmit “test data” pattern command produces a 2047 bit pseudo-random pattern. This pattern is generated by the internal software using the polynomial $X^{11}+X^9+1$ form and a 12-bit shift register. Initial value of the register is 11111111110 (FFE hex). The 2047 bit sequence is repeated thereafter as long is necessary to complete the test duration (55 sec). This pattern is applied to the DSP processor data input for encoding and 4 FSK RC $\alpha=0.4$ pulse shaping .

The 8-level signaling transmits three information bits per symbol (baud) which yields a bit rate of three times the on-air baud rate, hence the 28.8 kbps references in the Installation Guide correspond to a transmitter baud rate of 9600 baud. That digital signal is digitally filtered (Squared Root or pure Raised Cosine pulse shaping with $\alpha=0.4$) by the DSP then fed to the CODEC for digital to analogue conversion as explained in previous submissions. This xRC8FSK wave shape applied to the FM modulator will then produce a compact RF spectrum, when using proper frequency deviation, to fit inside the restrictive masks inherent to the intended channel bandwidth.

For 28800 bit rate the deviation is set to 3.39kHz using a 1kHz tone to control the deviation level.

TEST EQUIPMENT: Attenuator, BIRD Model / 100-A-MFN-30 / 30 dB / 100 Watt
Splitter Minicircuits model ZFSC-2-4
DC Power Source, Model Astron VS 20M
Communication Analyzer, Model IFR COM120B (deviation meter)
Spectrum Analyzer, Model HP E4401

TEST SET-UP:

NAME OF TEST: Transmitter Occupied Bandwidth (Continued)
GEMINI Modem at 48000bps, 16000 bauds xRC8FSK

MODULATION SOURCE DESCRIPTION:

TX Data Test Pattern:

The transmit “test data” pattern command produces a 2047 bit pseudo-random pattern. This pattern is generated by the internal software using the polynomial $X^{11}+X^9+1$ form and a 12-bit shift register. Initial value of the register is 11111111110 (FFE hex). The 2047 bit sequence is repeated thereafter as long is necessary to complete the test duration (55 sec). This pattern is applied to the DSP processor data input for encoding and 4 FSK RC $\alpha=0.4$ pulse shaping .

This data follows same modulation process as described in Digital Modulation Techniques (page 9) and the resulting base band signal feeds the modulator's input of the transceiver.

For 16000 baud rate the deviation is set to 3.65kHz using a 1kHz tone to control the deviation level.

NECESSARY BANDWIDTH (Bn) COMPLIANCE

See Page 11 for Occupied Bandwidth. $14670\text{Hz} < 20000\text{Hz}$, Authorized Bandwidth

TEST DATA: Refer to the following graphs:

MASK: G,40W

OUTPUT POWER: 40 Watts

48000 bps /16000 bauds 8 level FSK

PEAK DEVIATION = 3650 Hz

SPAN = 100 kHz

MASK: G, 5W

OUTPUT POWER: 5 Watts

48000 bps /16000 bauds 8 level FSK

PEAK DEVIATION = 3650 Hz

SPAN = 100 kHz

NAME OF TEST: Transmitter Occupied Bandwidth
GEMINI Modem at 43200 bps, 14400bauds 8FSK

Mask compliance data in support of second Emission Designator **14K7F1D**

RULE PART NUMBER: 2.201, 2.202, 2.1033 c (14), 2.1041, 2.1049, 90.209 (b)(5), 90.210 (g)

MINIMUM STANDARD: Mask G
Sidebands and Spurious [Rule 90.210 (g)]
Authorized Bandwidth = 20 kHz [Rule 90.209(b) (5)]
Fo to 5.0 kHz Attenuation = 0 dB
>5.0 kHz to 10.0 kHz Attenuation= $83 \cdot \log(f_d \text{ KHz} / 5)$ dB
>10.0 kHz to 250% Auth BW Attenuation = Lesser of:
 $116 \cdot \log(f_d \text{ KHz} / 6.1)$ dB,
 $50 + 10 \log_{10}(P)$ or 70dB

specifically:
10.0 kHz to 22.61 KHz Att = 24.9 dB to 66 dB (40W) then 66dB to ± 50 kHz
10.0 kHz to 18.91 KHz Att = 24.9 dB to 57 dB (5 W) then 57dB to ± 50 kHz
>250% Auth BW $43 + 10 \cdot \log(P)$ dB = 59dB(40W) or 50dB(5W)
Corner Points:
Fo to 5.0 kHz Attenuation = 0 dB
>5.0 kHz to 10.0 kHz Attenuation= 0 dB to 25 dB
>10.0 kHz to 15.0 KHz Attenuation = 25 dB to 45 dB
>15 kHz to 25kHz Attenuation = 45dB to 70 dB
>25kHz to 50kHz Attenuation = 70dB
>250% Authorized BW Attenuation = 53 dB

TEST RESULTS: Meets minimum standard (see data on the following pages)
TEST CONDITIONS: Standard Test Conditions, 25 C
TEST EQUIPMENT: Attenuator, BIRD Model / 100-A-MFN-30 / 30 dB / 100 Watt
Splitter Minicircuits model ZFSC-2-4
DC Power Source, Model Astron VS 20M
Communication Analyzer, Model IFR COM120B (deviation meter)
Spectrum Analyzer, Model HP E4401
