1.0 ABSTRACT

This report details the results of the FCC Code of Federal Regulations, 47 CFR, Part 15, Sub-Part C testing on one Hand-Held Wireless Mouse, Model No. CN-WM, Serial No. B50361, manufactured by Crestron Electronics, Inc.

The Hand-Held Wireless Mouse was found to be in compliance with the radiated portions of the FCC Code of Federal Regulations, 47 CFR, Part 15, Sub-Part C, specification limits.

Detailed test results can be observed in Enclosures 2 and 3 of this report.

The test results recorded in this report relate only to those items tested.

This report shall not be reproduced, except in full, without the written approval of Dayton T. Brown, Inc.

3.0 ADMINISTRATIVE INFORMATION

Customer: Crestron Electronics, Inc.
101 Broadway
Cresskill, NJ 07626

Manufacturer: Crestron Electronics, Inc.

Test Item: Hand-Held Wireless Mouse

Quantity Received: One

Model No.: CN-WM

Serial No.: B50361

Test Start Date: 1 December 1997

Test Completion Date: 2 December 1997

Disposition of Test Item: The test sample was returned to Crestron Electronics, Inc. on
2 December 1997.

4.0 TEST PROGRAM OUTLINE

Description of Test Method

Radiated Emission, Intentional Radiator,
30 MHz to 10 GHz

Occupied Bandwidth

Results

Met the specification
requirements.

Met the specification
requirements.

5.0 GENERAL TEST INFORMATION

Setup

For the radiated emission test in the frequency range of 30 to 1000 MHz, the test sample was set up in a climate controlled open field site that measures 44 feet long by 24 feet wide by 24 feet high.

For the radiated emission test in the frequency range of 1 to 10 GHz, the test sample was set up in an anechoic chamber that measures 30 feet wide by 32 feet long by 12 feet high.

Unit Operation:

Operational Mode Tested - Transmit Mode - The Hand-Held Wireless Mouse was transmitting at 433.92 MHz.

Enclosure 1

Test Equipment List

Test equipment utilized for the program reported herein was within its assigned interval of calibration.
Details are on file at Dayton T. Brown, Inc. and will be made available upon request.

Enclosure 2

Radiated Emission,
Intentional Radiator, 30 MHz to 10 GHz

RADIATED EMISSION.
INTENTIONAL RADIATOR. 30 MHz TO 10 GHz

Test Procedure

A radiated emission test, in the frequency range of 30 to 1000 MHz, was performed on the Hand-Held Wireless Mouse while it was mounted on a wooden table that was standing on a conductive turntable.

For the frequency range of 30 to 1000 MHz, measurements were made utilizing a manually tuned interference measurement receiver, which was located in the instrumentation room below the ground plane.

The receiver was connected to the measurement antenna, which was located 10 meters from the turntable for the frequency range of 30 to 1000 MHz.

A linear polarized antenna was utilized for the measurements. The antenna height was varied between 1 and 4 meters and the test sample was rotated 360° to ensure maximum pickup from the test sample.

A radiated emission test, in the frequency range of 1 to 10 GHz, was performed on the Hand-Held Wireless Mouse while it was mounted on a wooden table in an anechoic chamber.

For the frequency range of 1 to 10 GHz, measurements were made utilizing a spectrum analyzer located in a shielded enclosure, which was attached to the anechoic enclosure.

The receiver was connected to the measurement antenna, which was located 3 meters from the table for the frequency range of 1 to 10 GHz, with a length of 50' coaxial cable.

The Hand-Held Wireless Mouse utilizes pulse modulation with a 50% duty cycle.

Any emissions not reported were at least 20 dB below the specification limits.

Measurements were made utilizing the following bandwidth and detector function:

Frequency Range	CISPR Bandwidth	Detector Function
30 to 1000 MHz	120 kHz	Quasi-Peak
1 to 10 GHz	100 kHz	Peak

The antenna per meter factors of the antennas utilized are depicted in the figures contained in this enclosure.

RADIATED EMISSION.
INTENTIONAL RADIATOR. 30 MHz TO 10 GHz
(Continued)

Test Procedure - (Continued)

The test setups employed are depicted in the photographs contained in this enclosure.

Test Results

No emission levels above the FCC Code of Federal Regulations, 47 CFR, Part 15, Sub-Part C, specification limits were observed.

Detailed test results for the radiated emission test for intentional radiators can be observed on pages 3 through 10 of this enclosure.

Enclosure 3

Occupied Bandwidth

OCCUPIED BANDWIDTH

Test Procedure

The occupied bandwidth of the Hand-Held Wireless Mouse was measured using a spectrum analyzer with a bandwidth setting of 100 kHz. The spectrum analyzer was operated in the "Max Hold" mode.

The Hand-Held Wireless Mouse has an operating frequency of 433.92 MHz. The maximum allowed bandwidth for devices operating above 70 MHz and below 900 MHz is 0.25 % of the center frequency.

The maximum allowed bandwidth is calculated as follows:

$$433.92 \text{ MHz} \times 0.0025 = 1.0848 \text{ MHz}$$

The occupied bandwidth was determined at the points 20 dB down from the carrier.

The test setup employed is depicted in the photograph contained in this enclosure.

Test Results

The test sample met the occupied bandwidth test. The measured occupied bandwidth from the Hand-Held Wireless Mouse was 456.25 kHz at the 20 dB down point.

Detailed test results for the occupied bandwidth test can be observed on page 2 of this enclosure.
