Dear Sir / Madam:

Re: Application for a Class II Permissive Change

The purpose of this document is to describe the differences between a new model of AT&T E2715B and a certified model of Vtech 2625. They are all VTech designed family models which are both 2.4GHz FHSS cordless telephones (2-HS Bundle System) with speakerphone and caller ID on handset.

The changes made on AT&T E2715B from Vtech 2625, belong to a Class II permissive change in this application. Below are differences between AT&T E2715B & Vtech 2625:

- A low-cost RF solution is used on AT&T E2715B - the RF module is migrated into the main board, i.e., RF board & Baseband board are on the same PCB
- The layout and circuitry of the RF module have minor differences from Vtech 2625
- Same antenna but different in antenna matching

Sincerely,

A handwritten signature in black ink, appearing to read "Joseph Poon".
