NOTICE OF PROPRIETARY INFORMATION

Information contained herein is proprietary and is property of **ITRON, Inc.** where furnished with a proposal, the recipient shall use it solely to evaluate the proposal. Where furnished to a customer it shall be used solely for the purposes of inspection, installation or maintenance. Where furnished to a supplier, it shall be used solely in the performance of work contracted for this company. The information shall not be used or disclosed by the recipient for any other purpose, whatsoever.

Test Data Summary

FCC 15.247 / ISSED RSS-247; Frequency Hopping Transmitter;

100GA – Residential, 902.2MHz – 927.75 MHz

FCC ID: EWQ100GA; IC: 864D-100GA IC Device HVIN/Models: 1U,2U,8U

OATS Registration Number: FCC 90716, IC 864D-1, 500051-0 NVLAP, ICSI

Rule	Description	Spec Limit	Max. Reading	Pass/Fail
Parts 2.1091(mobile) & 1.1310	Limits for Maximum Permissible Exposure (MPE)	formula	0.087mW / cm ² @ 20 cm	Pass
RSS-102i5 Sec. 4, Table 4	RF Field Strength Limits for Devices Used by the General Public	formulas	0.87W/M ² @ 0.2 M	Pass

Rule versions: FCC Part 1; FCC Part 2; FCC Part 15, RSS-102 Issue 5 (03-2015); RSS-247 Issue 1 (5-2015); RSS-Gen Issue 4 (12-2014).
Reference docs: ANSI C63.4-2014; ANSI C63.10-2013; DA 00-705 (03-30-2000); OET65 (08-1997); OET65C (06-2001); IEEE C95.3-2002.

CONDITIONS DURING TESTING

No Modifications to the EUT were necessary during the testing.

ANSI C63.4 - Temperature and Humidity During Testing

The temperature during testing was within +10° C and +40° C.

The Relative humidity was between 10% and 90%.

RSS-Gen 4.3: Tests shall be performed at ambient temperature

EQUIPMENT UNDER TEST (EUT) DESCRIPTION

Itron declares that the EUT tested was representative of a production unit.

EQUIPMENT UNDER TEST

EUT Module

Manuf: Itron, Inc.
Itron p/n: ERG-7000-001/002/003/004/009
Serial Number(s): 12
Power source: Fresh Batteries were used

Peripheral Devices

None

2.1091(mobile) & 1.1310 /

RSS-102 Sec 4 (table4) - Canada Safety Code 6; Table 5

Maximum Permissible Exposure (MPE)

2.1091. Radiofrequency radiation exposure evaluation: mobile devices. (a) Requirements of this section are a consequence of Commission responsibilities under the National Environmental Policy Act to evaluate the environmental significance of its actions. See subpart I of part 1 of this chapter, in particular § 1.1307(b). (b) For purposes of this section, a mobile device is defined as a transmitting device designed to be used in other than fixed locations and to generally be used in such a way that a separation distance of at least 20 centimeters is normally maintained between the transmitter's radiating structure(s) and the body of the user or nearby persons.

1.1307 (b) In addition to the actions listed in paragraph (a) of this section, Commission actions granting construction permits, licenses to transmit or renewals thereof, equipment authorizations or modifications in existing facilities, require the preparation of an Environmental Assessment (EA) if the particular facility, operation or transmitter would cause human exposure to levels of radiofrequency radiation in excess of the limits in §§1.1310 and 2.1093 of this chapter.

1.1310. Radiofrequency radiation exposure limits. - (e) Table 1 below sets forth limits for Maximum Permissible Exposure (MPE) to radiofrequency electromagnetic fields. (The criteria listed in Table 1 shall be used to evaluate the environmental impact of human exposure to radiofrequency (RF) radiation as specified in §1.1307(b), except in the case of portable devices which shall be evaluated according to the provisions of §2.1093 of this chapter.)

2.1093. Radiofrequency radiation exposure evaluation: portable devices.

Power level	Field ⁽¹⁾ strength (dBuV/m)	EIRP ⁽²⁾ (dbm)	Conducted ⁽³⁾ power (dbm)	Conducted power (watts)	antenna ⁽⁴⁾ gain (dbi)	antenna gain numeric
0	N/A	N/A	-3.27 ⁽⁵⁾	.00054	0.51 ⁽⁵⁾	1.12 ⁽⁵⁾
+10	102.62	7.42	6.91	0.005	0.51	1.12
+24	119.02	23.82	22.33	0.171	1.49	1.41
+27	121.62	26.42	26.28	0.424	0.14	1.03

Determine the maximum power density for the general / uncontrolled population minimum separation distance of 20 cm. The power density is calculated as:

P_d = power density in mW/cm^2

P_t = transmit power in milliwatts

$$P_d = \frac{P_t \times G}{4 \times \pi \times r^2}$$

G = numeric antenna gain

r = distance between body and transmitter in centimeters.

FCC Limits: 902.2MHz / 1500 = 0.602 mW / cm^2 @ 20cm

IC Limits: 902.2MHz; $0.02619 \times f^{0.6834} \text{ w/m}^2 = 2.74 \text{ W} / M^2$ (@ 0.2M)

IC max limit for calculation: $1.31 \times 10^{-2} f^{0.6834} \text{ watts eirp} = 1.37 \text{ watts EIRP}$

Power level 0

Max antenna gain = 0.51 dBi = 1.12 numeric

Max TX power = -3.27dBm = 0.54milliwatts

results: $P_D = (0.54 \times 1.12) / (4 \times \pi \times 20cm^2)$
W/m² = 10 times mW/cm²

Max EIRP = 0.00054Watts

= 0.00012 mW / cm^2 @ 20 cm

= 0.0012 W/M² @ 0.2 M

Power level +10

Max antenna gain = 0.51 dBi = 1.12 numeric

Max TX power = 6.91dBm = 5milliwatts

results: $P_D = (5 \times 1.12) / (4 \times \pi \times 20cm^2)$
W/m² = 10 times mW/cm²

Max EIRP = 0.0056Watts

= 0.001 mW / cm^2 @ 20 cm

= 0.01 W/M² @ 0.2 M

Power level +24

Max antenna gain = 1.49 dBi = 1.41 numeric

Max TX power = 22.33 dBm = 171 milliwatts

results: $P_D = (171 \times 1.41) / (4 \times \pi \times 20\text{cm}^2)$
 $W/m^2 = 10 \text{ times } mW/cm^2$

Max EIRP = 0.171 Watts

= 0.048 mW / cm^2 @ 20 cm= 0.48 W/M^2 @ 0.2 MPower level +27

Max antenna gain = 0.14 dBi = 1.03 numeric

Max TX power = 26.28 dBm = 424 milliwatts

results: $P_D = (424 \times 1.03) / (4 \times \pi \times 20\text{cm}^2)$
 $W/m^2 = 10 \text{ times } mW/cm^2$

Max EIRP = 0.424 Watts

= 0.087 mW / cm^2 @ 20 cm= 0.87 W/M^2 @ 0.2 M

notes:

- (1) Field strength (dBuV/m) from International Certification Services Report # 060616
- (2) EIRP (dbm) used 412172 D01 Determining ERP and EIRP v01r01 to calculate EIRP
- (3) Conducted power (dbm) From Itron Report FCC-7000-001
- (4) Antenna gain (dbi) = EIRP-Conducted power
- (5) Conducted power (dbm) From Itron Report FCC-7000-002 and the antenna gain used was calculated at power level +10dbm.
