1 GENERAL INFORMATION

The following Application for a Class II Permissive Change is prepared on behalf of **Topaz3, LLC** in accordance with Part 2, and Part 95(B) of the Federal Communications Commissions rules and regulations and Industry Canada Standards. The Equipment Under Test (EUT) was the **MODEL: TK14; FCC ID: F3JTK14; Canada Certification: 1531031991A**. The test results reported in this document relate only to the item that was tested.

1.1 MODIFICATIONS

No modifications were made to the EUT during testing.

1.2 RELATED SUBMITTAL(S)/GRANT(S)

This is a Class III change for the original certification on this device.

1.3 TEST FACILITY

The open area test site and conducted measurement facility used to collect the radiated data is located on the parking lot of Rhein Tech Laboratories, Inc. 360 Herndon Parkway, Suite 1400, Herndon, Virginia 20170. This site has been fully described in a report, submitted to and approved by the Federal Communication Commission to perform AC line conducted and radiated emissions testing.

1.4 PERMISSIVE CHANGE INFORMATION

The primary changes from the TK14 include:

Receive WX frequencies 162.400 - 162.550 Voice activated TX (VOX)

360 Herndon Parkway
Suite 1400
Herndon, VA 20170
<http://www.rheintech.com>

2 SYSTEM TEST CONFIGURATION

2.1 POWER CAPABILITY

The EUT meets the following condition as specified in FCC Rules and Regulation Part 95 Section 95.639:

1. The operating power is fixed at the factory less than 0.5 Watt ERP.
2. The antenna is fixed and non-adjustable.

360 Herndon Parkway
Suite 1400
Herndon, VA 20170

5 RADIATED EMISSIONS MEASUREMENTS

Before final measurements of radiated emissions were made on the open-field three/ten meter range, the EUT was scanned indoors at one meter and three meter distances, in order to determine its emissions spectrum signature. The physical arrangement of the test system and associated cabling was varied in order to determine the effect on the EUT's emissions in amplitude, direction and frequency. This process was repeated during final radiated emissions measurements on the open-field range, at each frequency, in order to insure that maximum emission amplitudes were attained.

Final radiated emissions measurements were made on the three-meter, open-field test site. The EUT was placed on a nonconductive turntable approximately 0.8 meters above the ground plane. The spectrum was examined from 30 MHz to 1000 MHz using a Hewlett Packard 8566B spectrum analyzer, a Hewlett Packard 85650A quasi-peak adapter, and EMC0 log periodic and biconical antenna. In order to gain sensitivity, a HP8447 preamplifier was connected in series between the antenna and the input of the spectrum analyzer.

At each frequency, the EUT was rotated 360 degrees, and the antenna was raised and lowered from one to four meters in order to determine the maximum emission levels. Measurements were taken using both horizontal and vertical antenna polarizations. The spectrum analyzer's 6 dB bandwidth was set to 120 kHz, and the analyzer was operated in the CISPR quasi-peak detection mode. No video filter less than 10 times the resolution bandwidth was used. When any clock exceeds 108 MHz, the EUT was tested between 1 to 2 Gigahertz in peak mode with the resolution bandwidth set at 1 MHz as stated in ANSI C63.4. The highest emission amplitudes relative to the appropriate limit were measured and recorded in this report.

Note: Rhein Tech Laboratories, Inc. has implemented procedures to minimize errors that occur from test instruments, calibration, procedures, and test setups. Test instrument and calibration errors are documented from the manufacturer or calibration lab. Other errors have been defined and calculated within the Rhein Tech quality manual, section 6.1. Rhein Tech implements the following procedures to minimize errors that may occur: yearly as well as daily calibration methods, technician training, and emphasis to employees on avoiding error.

5.1 RADIATED EMISSION DATA

5.1.1 FCC PART 95.639: MAXIMUM TRANSMITTER POWER {EFFECTIVE RADIATED POWER}

TABLE 5-1: RADIATED EMISSIONS MAXIMUM TRANSMITTER POWER (FCC 95.639)

Emission Frequency (MHz)	Signal Generator Reading (dBm)	Cable Loss and TX Antenna Gain Correction (dB)	Corrected Signal Generator Level (dBm) ERP	Watt	Limit 95.639 (d) Watt
462.5625	27.7	-1.1	26.6	0.457	0.5

6 FCC PART 2.1049 & 95.633: EMISSION BANDWIDTH

6.1 FCC PART 2 §2.1049 (C) (1): OCCUPIED BANDWIDTH

OCCUPIED BANDWIDTH - COMPLIANCE WITH THE EMISSION MASKS

6.2 TEST PROCEDURE

ANSI/TIA/EIA-603-1992, section 2.2.11

Device with audio modulation: Transmitter is modulated with a 2500 Hz sine wave at an input level of 16 dB greater than that required to produce 50% of rated system deviation at 1000 Hz.

PLOT 6-1: EMISSION BANDWIDTH (FCC 2.1049 & 95.633)

360 Herndon Parkway
Suite 1400
Herndon, VA 20170
<http://www.rheintech.com>

7 FCC PART 2.202: NECESSARY BANDWIDTH AND EMISSION BANDWIDTH H

FCC Part 95.631 and FCC 95.193:

FCC Part 95.631 (d): Emission Types

"An FRS unit may transmit only emission type F3E."

Type of Emission: F3E

Necessary Bandwidth and Emission Bandwidth:

12.5kHz (NB channel) : $B_n = 11K0F3E$

Calculation:

Max modulation (M) in kHz : 3

Max deviation (D) in kHz: 2.5 (NB)

Constant factor (K) : 1

$B_n = 2xM + 2xDK$

FCC Part 95.633 (c) Emission Bandwidth

"The authorized bandwidth for emission type F3E transmitted by a FRS unit is 12.5 kHz."

8 FCC PART 95.635: UNWANTED RADIATION

8.1 TEST PROCEDURE

ANSI/TIA/EIA-603-1992, section 2.2.12

The transmitter is terminated with a 50 Ω load and is modulated with a 2,500 Hz sine wave at an input level 16 dB greater than that required to produce 50% of the rated system deviation at 1000 Hz.

8.2 TEST DATA
