

Intermodulation (continued)

- Intermodulation products are spurious emissions which must meet the emissions mask in each Radio Service rule part.
- Test Procedure - Should be tested at highest rated output level.
 - Three Signal Test
 - two near to each other at one edge of passband
 - other signal alone at other edge of passband
 - Two Signal Test - this requires the test be done twice.
 - Once with two signals at upper edge of passband.
 - Once with two signals at lower edge of passband.
