

AA3153 Toll Antenna

Features

- ▶ Low-profile antenna
- ▶ Virtually no side or back lobes
- ▶ Weatherproof enclosure

The AA3153 Toll Antenna broadcasts and receives radio frequency signals in the 902 to 928 MHz radio frequency band. It is specifically designed for toll lane applications, with virtually no side or back lobes, which helps confine antenna coverage to a single lane width. The AA3153 Toll Antenna is ideally suited to applications requiring a low profile antenna.

A weatherproof enclosure provides favorable electrical characteristics, resistance to ultraviolet radiation, and maximum corrosion resistance. The AA3153 Toll Antenna includes a sturdy aluminum backplate with mounting hardware, a multi-patch array, and matching network.
