Reference E. Mail correspondence number 11402

After taking with the FCC and reviewing the current rules for low power Mobil transmitters is was necessary to decrease the output power to 120 mw max., so the device could be operated under part 90.217 of the rules.

From 731 has been updated to reflect all changes.

90.214 Data not required under 90.217.

The attached exhibits demonstrate compliance with 90.217. Items changed include Power Measurements, Modulation limiting and frequency response plots, Emission "mask," B(n), Spurious response both conducted and radiated. Up-dated tune-up procedure.

Please advise If anything else is required.
